Original Flooding Conditions of the Home and Barn:

The first time we realized there was a major garbage problem was in the middle of a flood the garbage started floating out of the weeds, grass, bushes and choking up the culvers:

Garbage In Almost All of the Soil:

Our First Focus was on broken glass; we have removed ton(s) of it:

There appears to be a flood mud zone from 1996 Flood?

The driveway culvert is too small and it backs up the flood waters; we believe the current culvert size is Four-Feet in Diameter and it should be Six-Feet-in-Diameter or larger:

The City of Gaston facing element of this property would not flood (here most of it is dry during the highest flood waters); What causes it to flood is the artificial wall of soil formed by the people that dig out the valve and associated irrigation ditch and the fact that the water is allowed to run onto this lot? The ditch is too small?

We have removed tons of garbage so far; sometimes picking individual steel items from the soil one at a time:

We have built and used custom equipment attachments to rake the garbage out of the soil:

<u>There is garbage deep in the soil:</u>

Profound Number of Broken Trees This Winter and Last Summer:

This type of a fractured tree is extremely dangerous to fell.
