Executive summary

The Health Evidence Review Commission (HERC) is charged by state statute to maintain the Prioritized List of Health Services, which the Legislature uses to determine the benefit package for the Oregon Health Plan. HERC uses clinical effectiveness, cost-effectiveness and public input to rank combinations of conditions and treatments on the list by importance. The “2024–25 Prioritized List of Health Services,” aka “Prioritized List,” (see Appendix C) shows the final line rankings approved by HERC as of May 2023.

HERC made the following biennial changes:

- Moved several types of insomnia to a higher priority line so that effective treatments, such as cognitive behavioral therapy (CBT), will be covered. An accompanying guideline note limits the use of sedative hypnotic medications to a short-term course for patients with ongoing CBT regimens or those who have failed to respond to CBT.
- Deleted the line for selective mutism (474) and moved the condition to a higher priority line (414). Selective mutism is a rare disorder and can be treated with psychotherapy and anxiety medications.
- Deleted the line for conduct disorder (line 479) and moved the condition to a higher priority line (line 420) to ensure coverage of effective therapies which may reduce behavioral problems and help decrease incarceration among youth.
- Merged four lines related to different conditions requiring liver transplantation (162, 241, 263, 307) to create a single line, prioritized at 261. An accompanying guideline note clarifies which procedures pair with which conditions. There is no effect on coverage.
- Combined two lines (292 and 491) containing treatment for a form of cerebral palsy. Previously, dorsal rhizotomy was placed on the lower line. However, newer evidence shows that this treatment improves motor function.
- Deleted line 487 (Angioneurotic angioedema) because it contained codes already on line 192 (Hereditary angioedema). Line 192 now

represents all types of angioedema. There is no effect on coverage.

- Deleted line 647 (Agenesis of lung). The single diagnosis on this line already appeared with other congenital anomalies of the lung on line 197. There is no effect on coverage.

The Commission also considered reprioritizing treatments for temporal mandibular joint (TMJ) syndrome to a higher line. Ultimately, the Commission declined to make any change given lack of effectiveness of existing treatments. Treatments for TMJ remain on lines 550 (splints) and 643 (surgery).

HERC appreciates the opportunity to continue its work on health care prioritization in order to provide the most beneficial, cost-effective services to Oregon's Medicaid population.

Charge to the Health Evidence Review Commission

HB 2100 (2011) established the Health Evidence Review Commission (HERC) in part to:

“[D]evelop and maintain a list of health services ranked by priority, from the most important to the least important, representing the comparative benefits of each service to the population to be served.”¹

As it performs this work, HERC is also directed to:

“[C]onsider both the clinical effectiveness and cost-effectiveness of health services, including drug therapies, in determining their relative importance using peer- reviewed medical literature...”²

HERC is composed of 13 members, appointed by the governor and confirmed by the Oregon Senate. ORS 414.688 contains the membership requirements. Specifically, there are five physicians (including one doctor of osteopathy and one hospital-based physician), two consumer representatives, a public health nurse, a behavioral health representative, a dentist, a complementary and alternative medicine provider, a pharmacy representative, and a health insurance representative. HERC relies heavily on input from its subcommittees and ad hoc advisory panels. HERC’s Value-based Benefits Subcommittee (VbBS) reviews all potential changes to the Prioritized List before they are considered by the HERC for adoption. VbBS includes both Commission members and other representatives of provider organizations and other organizations.³ The Evidence-based Guidelines Subcommittee (EbGS) produces in-depth evidence reports which inform decisions about changes to the Prioritized List, including Coverage Guidances and Multisector Intervention Reports. An Oral Health Advisory Panel, Behavioral Health Advisory Panel and Genetics Advisory Panel provide recommendations on new codes and issues specific to their areas of expertise.

HERC’s Prioritized List is composed of condition-treatment pairs of diagnosis and treatment codes used to define the services represented. The conditions on the list are represented by the coding nomenclature of the International Classification of Diseases, Tenth

¹ Oregon Revised Statutes (ORS) 414.690(3).

² Oregon Revised Statutes 414.690(4)(c).

Revision, Clinical Modification (ICD-10-CM). Medical treatments are listed using codes from the American Medical Association's Current Procedural Terminology (CPT), the American Dental Association's Current Dental Terminology (CDT) and the Healthcare Common Procedure Coding System (HCPCS). Appropriate diagnostic services are covered under the Oregon Health Plan (OHP) regardless of whether the final diagnosis appears in the funded region of the Prioritized List. After a diagnosis is established, the list is used to determine whether further treatments are covered under the plan. Therefore, the list does not include diagnosis codes representing signs and symptoms and procedure codes for diagnostic procedures, which are covered services under the Oregon Health Plan. Palliative care is covered regardless of the underlying condition. Palliative care is described by the first of eight statements of intent associated with the Prioritized List (see page 46).

Ancillary services are covered for conditions that are in the funded region. Examples of covered services include prescription drugs, durable medical equipment, or services such as the removal of sutures. Because of the volume of codes that represent ancillary services and their frequent association with many diagnoses, these codes do not appear on the list. In some cases, HERC has created guideline notes for specific ancillary and diagnostic services to establish coverage criteria for appropriate, evidence-informed use of these services.

There are some procedure codes which are not included on the list because they are not appropriate for coverage, such as experimental treatments or cosmetic services. Diagnosis codes that are non-specific or do not identify a health condition or disease process are also generally not included on the Prioritized List. The Oregon Health Authority's Health Systems Division maintains electronic files to account for codes not appearing on the list and to ensure appropriate fee-for-service reimbursement. OHP providers and coordinated care organizations (CCOs) have web-based access to the information in these electronic files through the Medicaid Management Information System (MMIS) so that service coverage is as uniform as possible.

HERC staff regularly consults with CCO medical directors and staff from the Oregon Health Authority's Health Systems Division and Office of Actuarial and Financial Analytics to determine the potential impact of changes the HERC is considering to the Prioritized List on program cost and administrative burden. These entities share this information with HERC during its decision-making process as appropriate. This collaboration supports effective implementation of a coverage change, including any necessary adjustments to the CCO global budgets.

The prioritization methodology

HERC continues to use the prioritization methodology that has been in place since 2008. Each line item on the Prioritized List is assigned to one of eight broad health care categories that establish a basic framework for the list (see Figure 1). Once the line items have been assigned to one of the categories, a list of criteria is used to sort them within the categories (shown as Figure 2, with the range of scores shown in parentheses). These criteria are felt to best capture the impacts on both individuals' and the population's health that HERC believes are essential in determining the relative importance of a condition-treatment pair.

Because not every service in category 1 is more important than every service in category 2, and so on, a weight is applied to each category that is multiplied by the total criteria score for each condition-treatment pair. The category weights are shown in parentheses after the title for each category in Figure 1. A total score is then calculated for each line using the formula shown in Figure 3 to sort all line items. The lowest net cost breaks any ties. For certain lines, HERC sets the priority manually when the Commission decides the appropriate placement differs from the score calculated using the methodology above. This manual ranking is used for about 3 percent of lines.

Services near the top of the list as a result of this methodology include the following:

- Maternity care and newborn services
- Preventive services found to be effective by the U.S. Preventive Services Task Force, and
- Treatments for chronic diseases where ongoing maintenance therapy can prevent exacerbations of the disease that lead to avoidable, high-intensity service utilization, morbidity and death. Examples of these diseases include diabetes, major depression, asthma and hypertension.

Biennial review of the Prioritized List

HERC conducted the 16th biennial review of the Prioritized List of Health Services in 2022–2023.

The most substantial change in prioritization related to coverage of behavioral health conditions such as conduct disorder and selective mutism. Multiple agency partners requested the HERC to review conduct disorder, including the Oregon Youth Authority, the Mental Health Clinical Advisory Group, and child welfare. After review, HERC determined that conduct disorder should be prioritized to a higher line on the list because treatment of conduct disorder has been shown to reduce incarceration time among youth, improve parental mental health, and reduce costs. Similarly, the Commission elected to move selective mutism to a higher-priority line given the impact of available treatments on childhood school attendance and mental health.

In addition, the Commission made several other important changes to the list:

- Added coverage for treatments for insomnia. Previously, the treatment for this condition appeared on line 606. The commission moved several forms of insomnia to line 202. Line 202 contains cognitive behavioral therapy (CBT), an effective treatment. Additionally, a new guideline was developed to include coverage of a short-term course of sedative hypnotic medications for patients with ongoing CBT regimens or those who have failed to respond to CBT.
- Created a new line to encompass all conditions requiring liver transplantation. Previously, conditions requiring transplant were found on four lines (162, 241, 263, 307) due to differing prioritization of individual conditions. The codes on these lines were merged and prioritized at line 261, along with a new guideline note which will improve clarity about which procedures are covered for which conditions.
- Combined two lines (292 and 491) containing treatment of spastic cerebral palsy. Previously, dorsal rhizotomy was placed on the lower line. However, newer evidence of effectiveness showed that this treatment results in improved motor function.

- Combined two lines (192 and 487) containing treatments for angioedema. Previously, two lines existed to differentiate between hereditary angioedema and angioneurotic edema. However, the coding on both lines was redundant and found to be potentially confusing. Therefore, line 487 was deleted and line 192 was renamed from Hereditary Angioedema to Angioedema to represent all types of this condition. There is no effect on coverage.
- Combined two lines (197 and 647) containing treatments for agenesis of the lung. The coding on both lines was redundant and found to be potentially confusing. Therefore, line 647 was deleted. There is no effect on coverage.

The Commission also considered reprioritizing treatments for temporal mandibular joint (TMJ) syndrome to a higher line. Ultimately, the Commission declined to make any change because of the lack of effectiveness of existing treatments. Treatments for TMJ remain on lines 550 (splints) and 643 (surgery).

Tables 1 and 2 show the structural changes made to lines during this biennial review.

Other biennial review changes

In total, this biennial review resulted in the deletion of nine lines and the creation of one new line, with a net reduction of eight lines on the List. The Prioritized List appearing in Appendix C is 654 lines long. However, changes in line structure occurred both in the List’s funded and unfunded regions. Therefore, line 469 on the new list equates to the funding level of the 2022–23 list at line 472. In the Oregon Health Plan Medicaid 1115(c) demonstration waiver, effective 2022-2027, the state agreed with the Centers for Medicare and Medicaid Services to continue keep the funding line at the same relative position in which it has appeared since 2012, extending an agreement that dates to 2016.

Interim modifications to the Prioritized List

In addition to the work on the biennial review of the Prioritized List, HERC continues to maintain the list as necessary during the interim periods. The 2024–2025 Prioritized List incorporates interim modifications previously reported to legislative leadership in conjunction with the prioritized lists published on Oct. 1, 2021, Jan. 1, 2022, Oct. 1, 2022, Jan. 1, 2023, and Feb. 1, 2023. These notices are located on HERC’s website. They include a detailed description of the thousands of changes due to incorporating new medical codes, advancements in technology, new data regarding existing technologies, and error or omission corrections. HERC continues its use of a transparent process, which allows any stakeholder to request review of a prioritization topic. Interim modifications to the 2022–2023 Prioritized List will be published Oct. 1, 2023, and these will be incorporated into the Jan. 1, 2024 Prioritized List when it is published in December 2023.

Recommendations

The Health Evidence Review Commission is pleased to offer these recommendations to the Governor and 82nd Oregon Legislature:

1. Adopt the Prioritized List of Health Services appearing in Appendix C for calendar years 2024–25. Once interim modifications to the List are completed in October 2023, the complete 2024–25 Prioritized List of Health Services will be published on HERC’s website.
2. Adopt the new and revised statements of intent and practice guidelines incorporated into the Prioritized List (Appendix B).
3. Maintain a funding level adequate to support lines 1–469 in the funded region, as required under the terms and conditions of the 1115(c) waiver extension the Department of Health and Human Services most recently extended for 2022–27.

HERC thanks the Governor and Legislature for the opportunity to serve the citizens of Oregon.

Appendix B: Practice guideline changes

Changes related to Insomnia

New guideline note (effective Jan. 1, 2024):

Guideline note 194, Insomnia

Line 202

Insomnia is included on this line for pairing with cognitive behavioral therapy (CBT). Short term (up to 1 month per year) treatment with sedative-hypnotic medications is included on this line only if the patient is currently in CBT or has failed to respond to recent CBT (in the past year).

Long-term (more than 1 month) treatment with sedative-hypnotic medications is not included on this line.

Changes related to Conduct Disorder

Revised guideline note (went into effect Jan. 1, 2023):

Guideline note 54, Conduct Disorder

Line 420

Conduct disorder rarely occurs in isolation from other psychiatric diagnosis, the patient should have documented screening (or documented refusal to be screened) for attention deficit/hyperactivity disorder (ADHD); chemical dependency (CD); mood disorders such as anxiety and/or depression; and physical, sexual, and family abuse or other trauma (PTSD).

ICD-10-CM F91.9 (Conduct disorder, unspecified) is included on Line 420 only for children ages 5 and younger who cannot be diagnosed with a more specific mental health diagnosis.

Appendix C: Prioritized health services

Frequently asked questions: A user's guide to the Prioritized List

This summary of the most frequently asked questions and their answers provides an overview of the Prioritized List format, defines important terms and provides educational examples.

1. Does the line descriptor contain every diagnosis?

Each line has a description of both a condition and treatment. Some lines have only one condition, but others may have several related conditions. A line may include physical, behavioral health or oral health conditions. The line descriptor contains the most frequent condition, or a cluster of conditions represented by the ICD-10-CM codes. For example, cystic fibrosis is listed by itself on line 20, but the codes listed on line 205 – described broadly as “Zoonotic bacterial diseases” – include plague, tularemia, anthrax, brucellosis, cat scratch disease and other specific diseases.

2. What do the line numbers represent?

The line numbers represent the rank order of the condition-treatment pairs assigned by the HERC. The lines are ranked according to the Commission's determination of the importance of these services to the population being served; the services on line 1 are most important to provide and those on line 654 are least important.

3. How is the funding line established?

The Oregon Legislature will review the Prioritized List included in this report. Per an agreement with the Centers for Medicare and Medicaid Services (CMS), Oregon will not move the funding line from its current relative position throughout the current Medicaid waiver demonstration period. If this report is accepted, the Legislature is expected to establish the funding line for this list after line 469 as part of the state budget unless a waiver amendment to move the funding line is sought. Upon CMS approval, the benefit

package represented by the services listed on or above the established funding line will be reimbursed under the Oregon Health Plan beginning no earlier than Jan. 1, 2024.

4. Why do many diagnoses appear more than once?

A given diagnosis or condition may have a continuum of treatments including medical, surgical or transplant services. For instance, all transplantations for either bone marrow or solid organs have a separate line in addition to the medical/surgical treatment. These treatments may vary in their clinical effectiveness and/or cost-effectiveness. Therefore, the HERC gives them separate rankings.

5. What are statements of intent?

Statements of intent allow HERC to indicate its intent for coverage of services that cannot be easily identified by medical codes. The titles of these statements appear later in Appendix C immediately following the list of lines on the Prioritized List.

6. What are practice guidelines?

Guidelines are used to further delineate conditions where the coding system does not adequately distinguish between subgroups of services that are treated differently or to indicate the most effective use of a particular treatment. This report provides a listing of the guideline titles. This includes guidelines associated with diagnostic and ancillary services. Some of these services appear on the Prioritized List, while others do not. A full listing of the practice guidelines is posted on HERC's website.

7. What are diagnostic services and are they covered?

In most instances, diagnostic services are covered and do not appear on the list. If a condition is diagnosed that appears below the funding line, the diagnostic visit and any necessary tests will be covered. However, subsequent office visits and ancillary services such as home health services will not be covered. Certain diagnostic services have either not been shown to be effective or do not affect management of the patient and the patient's health and, therefore, the Commission recommends they not be covered under the Oregon Health Plan.

8. What about preventive services?

The Oregon Health Plan encourages prevention and early intervention. Effective preventive services for adults and children are ranked on line 3 and include services recommended by the U.S. Preventive Services Task Force ("A" and "B" Recommendations), American Academy of Pediatrics (Bright Futures Guidelines),

Health Resources and Services Administration (Women's Preventive Services) and the Advisory Committee on Immunization Practices. In addition, preventive dental services are included on line 53.

9. What are ancillary services and are they covered?

Ancillary services are those goods, services and therapies considered integral to the condition's successful treatment. They include prescription drugs, durable medical equipment, hospital care and anesthesia. Ancillary services are generally reimbursable when used in conjunction with a covered condition, but may be subject to practice guidelines, Oregon Administrative Rules or other prior authorization criteria. For some ancillary services, HERC has developed a guideline note to ensure appropriate use of these services. In addition, some ancillary services are listed in guideline notes 172 and 173 after HERC found that they met the criteria for these guideline notes, including little or no benefit, lack of cost-effectiveness or harms that outweigh benefits.

10. What other resources are available to answer other questions?

See HERC's webpage for questions about the Prioritized List, the methodology used to create and maintain the List or other information concerning the work of the Health Evidence Review Commission.

See the Health Systems Division's Oregon Health Plan webpage for questions about plan eligibility or administration, or contact our office at 503-373-1985.

Appendix D: Evidence-based reports

Coverage guidances are evidence-based reports that include recommendations to payers and providers to guide coverage of health services. In addition, the Health Evidence Review Commission (HERC) develops multisector intervention reports to guide payers considering interventions outside of the clinical setting that can improve individual or population health. Note that multisector interventions are not required Oregon Health Plan benefits; they are appended to the Prioritized List as a resource for coordinated care organizations in making decisions about health-related services offered under Oregon’s approved waiver.

The HERC approved the following evidence-based reports from May 2021 through May 2023 (approval dates noted below). After approval, reports are reviewed when staff become aware of evidence or information that may result in a new recommendation. Those reports reaffirmed or updated from a prior review of the same topic are noted with an asterisk.

Where indicated, the new or updated report resulted in approved changes to the Prioritized List. The “List changes” column in the following table indicates whether changes to the Prioritized List were approved between August 2021 and May 2023 in conjunction with these coverage guidance approvals.
