

EMC Documentum Content Services for SharePoint

Access advanced content management capabilities through the familiar Microsoft SharePoint interface

The Big Picture

- Brings the centralized management and control provided by the EMC Documentum Content Server to users of the popular Microsoft SharePoint environment
- Allows SharePoint users to fully participate in larger corporate business processes involving enterprise content
- Increases productivity of knowledge workers by delivering essential content management technologies (including records management, document lifecycle management, business process management, and imaging) throughout the enterprise

Now you can increase the productivity of your knowledge workers and the adoption of enterprise content management technologies by providing easy access to business-critical content through the standard Microsoft applications and user interfaces that your employees utilize everyday.

EMC[®] Documentum[®] Content Services for SharePoint provides direct access to the Documentum Content Server natively through the SharePoint user interface. When business processes require advanced content management capabilities, EMC is the single-source provider of integrated enterprise content management solutions for SharePoint.

SharePoint as user interface for Documentum Content Server

The seamless integration of EMC Documentum Content Server and Microsoft Office SharePoint Server 2007 enables end users to leverage the SharePoint user interface as an alternative client to the Documentum repository, where enterprise content is securely stored. As a result, organizations will be able to:

- Expand the reach of content management throughout the organization, balancing IT's compliance and management needs with knowledge worker usability considerations
- Augment SharePoint by providing a single source for integrated enterprise content management technologies including records management, BPM, imaging, classification, and much more
- Extend SharePoint by providing a scalable, regulated infrastructure within an enterprise's standard content architecture

Archiving business-critical content to Documentum

EMC Documentum Archive Services for SharePoint provides an enterprise infrastructure for centralized control of content that has been created and managed in SharePoint. By archiving to EMC Documentum, your organization can consolidate fixed content in a corporate repository for reuse, records retention, or integration with content management applications. Use Archive Services for SharePoint in conjunction with Content Services for SharePoint when you need to automatically migrate content from SharePoint to Documentum.

Extending SharePoint with essential Documentum content management services

Included Web Parts:

Documentum Folders: Provides direct access to the Documentum Content Server for navigating and editing content

Documentum Inbox: Allows users to view and manage content-related tasks

Documentum Subscriptions: Lists content in Documentum that the user has subscribed to

Documentum Files: Shows content stored in Documentum and recently accessed by the user

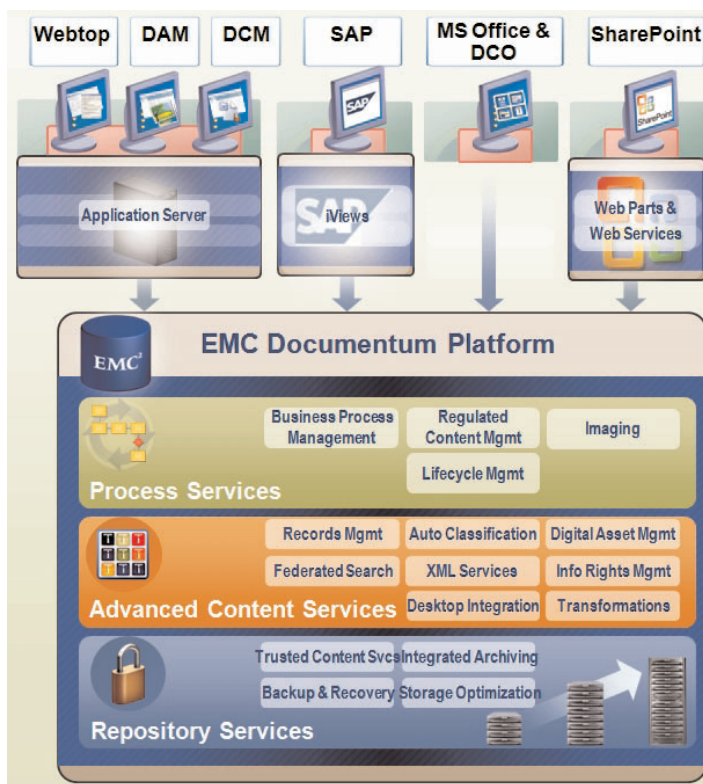

Documentum Favorites: Enables users to list and quickly open frequently accessed documents located in the Documentum repository

Documentum Workflows: Lists workflows initiated by or assigned to the user

Documentum Search: Allows users to easily locate content stored in Documentum

Content Services for SharePoint provides a suite of Web Parts that can be easily used with any SharePoint 2007 site. These Web Parts offer seamless, direct user access to a variety of business-critical capabilities provided by the EMC Documentum Content Server through the SharePoint user interface. Configure the Documentum Folders Web Part to expose the extended functionality provided for virtual documents, lifecycles, workflows, and subscriptions.

By integrating Content Services for SharePoint into a Microsoft SharePoint environment, organizations can deliver the full benefits of enterprise content management to the SharePoint user population while providing the appropriate level of centralized document control and policy management.

The EMC Documentum platform provides a single infrastructure for your enterprise-wide content management services, policy management, compliance controls, and much more
