iLearnOregon is a dynamic online learning and knowledge management tool, integrating general learning management functions (course catalog, registration, enrollments, transcripts and administration) as well as certification tracking and performance management tools such as individual development plans, skill assessments and performance evaluations. The statewide implementation, which started in March 2008, is executed in a way to ensure the system will fulfil its expected role as a **key tool** used to support the state of Oregon's training and workforce development efforts.

iLincOregon is a virtual classroom tool, which provides a robust platform for delivering distance learning.

Currently, iLearnOregon includes:

- 21 participating state agencies and divisions - delivering classroom-based and e-learning training and professional development to employees and city/county government partners.
- Over 49,000 user accounts.
- Over 11,000 active users.
- Over 4,000 city/county government users.
- Over 1,200 classroom-based and on-line courses.

Additional topics will include:

- iLearnOregon/iLincOregon - agency participation.
- iLearnOregon/iLincOregon testimonials.
- What's being planned for iLearnOregon agencies, including the ability for agencies to buy from a 15,000 e-learning course catalog.
