

New administrator at the State Data Center

DAS welcomed Julie Bozzi to the role of State Data Center Administrator in April, following the retirement of John Koreski. Julie has served as the SDC Deputy Administrator for the last four years. While in this role, she was responsible for overall SDC operations. Serving as part of the executive leadership, Julie understands the business challenges of the SDC as well as meeting the expectations of customers and stakeholders.

Julie Bozzi

Julie has earned recognition in the private and public sectors for successfully managing large business and IT projects and delivering results in politically and technically complex environments. She achieved this by creating a high level of trust and confidence with employers, customers, peers, vendors and staff. Agencies have regularly sought her out to manage the state's largest IT projects and initiatives, such as the CNIC project (Computing and Networking Infrastructure Consolidation), which led to her role as the SDC Deputy Administrator. Before that, she managed the application development and project management sections of the Department of Human Services and spent several years consulting on IT project methodologies at ODOT.

A recognized expert and advocate for project management, Julie helped charter the Project Management Institute in Salem and served several years as president. She holds the highest level of project management certification and a Bachelor of Art's degree in Management Information Systems. She has over 25 years of experience completing successful projects for IBM, Boeing, Westinghouse, Lockheed Martin and the three largest Oregon state agencies.
