### **Public health advisory issued for Lemolo Reservoir**

---

A health advisory prompted by high algae levels found in Lemolo Reservoir, located about 60 miles east of Roseburg, was issued today by the Oregon Department of Human Services (DHS) and the Douglas County Health Department. Lemolo Reservoir is managed by the Umpqua National Forest.

Water monitoring has confirmed the presence of blue-green algae that can produce toxins harmful to humans and animals, said Curtis Cude, hazardous incident tracking program manager in DHS.

These algae levels are likely to be associated with dangerous toxin concentrations in the water, according to World Health Organization guidelines.

Swallowing or inhaling water droplets should be avoided, as well as skin contact with water by humans or animals. Drinking water from Lemolo Reservoir is especially dangerous. Cude advised campers and other visitors that toxins cannot be removed by boiling, filtering or treating the water.

People who draw in-home water directly from an algae bloom-affected water body are advised to use an alternative water source. If their drinking water supplier draws from an affected water source, they may want to ask if the water has been tested. If the supplier has not tested the water, DHS recommends using another water source not affected by the bloom.

DHS recommends that people who choose to eat fish from waters where algae blooms are present should remove all fat, skin and organs before cooking, because toxins are more likely to collect in these tissues.

Additionally, DHS advises that people should not eat crayfish or freshwater shellfish harvested from Lemolo Reservoir while this advisory is in effect.

Exposure to toxins can produce symptoms of numbness, tingling and dizziness that can lead to difficulty breathing or heart problems and require immediate medical attention. Symptoms of skin irritation, weakness, diarrhea, nausea, cramps and fainting should also receive medical attention if they persist or worsen. Children and pets are particularly susceptible.

The public will be advised when the concern no longer exists.

With proper precautions to avoid water contact, people are encouraged to visit Lemolo Reservoir and enjoy activities such as camping, hiking, biking, picnicking, catch-and-release fishing and bird watching. Boating is safe as long as speeds do not create excessive water spray, which could lead to inhalation risk.

For local information contact the Diamond Lake Ranger District office at 541-498-2531 or 541-793-3310 weekends, or [www.fs.fed.us/r6/umpqua/](http://www.fs.fed.us/r6/umpqua/). For health information, contact Curtis Cude, hazardous incident tracking program manager, 971-673-0975 or [www.oregon.gov/DHS/ph/hab/](http://www.oregon.gov/DHS/ph/hab/); also the DHS toll-free information line at 1-877-290-6767, or Terry Westfall, Douglas County Health Department at 541-440-3569.
