

Influenza Vaccine and the ALERT Immunization Information System

Flu Season 2008-2009

- ✓ For the 2008-2009 influenza season, ALERT will be forecasting influenza shots due for children age 1 month --14 years on its Web site: www.immalert.org
- ✓ Remember to submit **all** of your clinic's influenza immunizations for patients of all ages to the ALERT registry. ALERT would like to receive all immunization data for clinical visits as well as for mass vaccination clinics. Public clinics are required to submit for all ages!
- ✓ If you have questions about ALERT, or would like to discuss strategies for tracking influenza vaccine administered at evening, weekend, or off-site flu clinics, please contact:
