

CARBON ALLOCATION TASK FORCE SUBCOMMITTEE
REVISED AGENDAS FOR UNRESOLVED ISSUES

July 27

1. **Finish offset issues and any other July 6 issues**
2. **Borrowing**
 - None
3. **Circuit breaker/accelerator**
 - Allow circuit breaker that delays the decline in the cap and an **accelerator** that tightens it?
4. **Adjustments and updates**
 - Allocated (free) allowances would transfer with load that **shifts** between two load-serving entities (LSEs).
 - **New large single loads**
 - **New large self generators**
 - Provide for **hydro mechanism** that extends the compliance period (for example add one year for each year of "exceptionally bad hydro generation" (to be defined), e.g. it would allow averaging over four years instead of three. This does not change the annual allocation or cap. (Provide authority for rulemaking?).
 - **Index** for updating allocations based on unusual socio-economic driven changes in load, still zero sum. (Provide authority for rulemaking?)
