Applicant seeks micrositing flexibility within the permitting corridors, as the exact project layout will vary depending on turbine make and model available prior to construction. A representative generic project layout will be submitted in the ASC for the purposes of noise and visual studies representing “worst-case” scenarios, including turbines, roads, collector systems, transmission lines and other project facilities. The site is approximately 50,000 acres and corridors are approximately 10,000 acres. The corridors are zoned for agricultural and forest use.
