August 4, 2011

TO: Land Conservation and Development Commission  
FROM: Paul Klarin, Marine Affairs Coordinator  
SUBJECT: **Agenda Item 2b, August 17 – 19, 2011, LCDC Meeting**

## **UPDATE APPOINTMENTS TO THE TERRITORIAL SEA PLAN ADVISORY COMMITTEE**

### **I. SUMMARY**

The department is currently working with the Ocean Policy Advisory Council (OPAC) to amend the Oregon Territorial Sea Plan (TSP). This is the second phase of an amendment process that resulted in the adoption of Part Five of the TSP by the commission in November of 2009. This phase will involve the adoption of maps that will designate specific areas for the development of marine renewable energy facilities, and the conditions for the use of those areas as needed. The commission has authorized the Territorial Sea Plan Advisory Committee (TSPAC) to produce recommendations for its consideration. The membership of the committee, approved by LCDC in December 2008, needs to be updated to replace persons who are no longer in service to several of the agencies, organizations or interests that are represented on the group.

#### **A. Type of Action or Commission Role**

The commission needs to replace TSPAC members by appointing new committee members.

#### **B. Staff Contact**

If you have any questions about the Territorial Sea Plan Advisory Committee, please contact Paul Klarin, Marine Affairs Coordinator at (503) 373-0050 ext. 249 or [paul.klarin@state.or.us](mailto:paul.klarin@state.or.us).

### **II. RECOMMENDED APPOINTMENTS**

The department recommends that the commission appoint the following members to the TSPAC: Robert Lurie to replace Herb Nock (Ocean Power Technologies); Jason Busch to replace Stephanie Thornton (Oregon Wave Energy Trust); Rebecca Sherman to replace Karen Chase

(ODOE); Laurel Hillmann to replace Jeff Farm (OPRD); Caren Braby to replace Cristin Don (ODFW); Rick Williams (Science Applications International Corp) to replace Justin Klure (Pacific Energy Ventures) as a technical consultant serving renewable energy companies; John Schaad to replace Melvin Rodrigues (BPA); and David Yamamoto to replace Neal Coenen as one of the public at large members.

### **III. BACKGROUND**

The Governor's March 26, 2008 Executive Order No. 08-07, Directing State Agencies to Protect Coastal Communities in Siting Marine Reserves and Wave Energy Projects, ordered the department to seek recommendations from the Ocean Policy Advisory Council (OPAC) concerning appropriate amendments to Oregon's Territorial Sea Plan, reflecting comprehensive plan provisions on wave energy projects. The order directed DLCD to provide final amendment recommendations to the commission on or before December 1, 2009. In October 2008, LCDC authorized the creation of the TSPAC, with Commissioner Tim Josi as chair, and approved the membership of the group at the December meeting that followed. TSPAC was created to consider and propose amendments to OAR 660, division 36 (Ocean Planning), to amend the Territorial Sea Plan for marine renewable energy generation facilities in state waters. This was initially achieved, in part, with the adoption by LCDC of TSP Part Five: Use of the Territorial Sea for the Development of Renewable Energy Facilities or Other Related Structures, Equipment or Facilities, in November 2009. Part Five provided the policies, procedures, standards and operational requirements for siting and developing renewable energy facilities. Part Five did not designate specific locations in the territorial sea for that type of new use, however Section B.1 (a) addresses the siting of areas designated for renewable energy facilities development in state waters by referencing the maps that will be incorporated into the TSP as appendix C. That will be achieved through the process now underway which will result in additional recommendations to LCDC from OPAC and TSPAC. ([http://www.oregon.gov/LCD/OCMP/Ocean\\_TSP.shtml](http://www.oregon.gov/LCD/OCMP/Ocean_TSP.shtml))

The process of spatial data collection, mapping and analysis, is currently being conducted through the OPAC and will result in a recommendation to LCDC to adopt maps that designate areas for renewable energy development, and provide special conditions for that use as necessary. This phase of the work, which is being conducted in conjunction with an extensive public involvement and review process, relies on the spatial analysis of existing ocean uses and ecological resources to identify specific areas within the territorial sea that may be appropriate for renewable energy development. The guidelines and criteria that are being used to conduct the spatial analysis are based on the implementation requirements of Goal 19: Ocean Resources.

The department, working with OPAC, recently concluded a series of work sessions held in Astoria, Garibaldi, Newport, Coos Bay, Port Orford, Brookings and Salem. These sessions were designed to increase public involvement and awareness in the process, and to get stakeholder feedback on the process and methods being applied to the spatial analysis. This public review process is being conducted with the use of the Oregon MarineMap system that enables the aggregation of digital spatial data to create map overlays, and the ability to do simple analysis of the summary overlays of mapped information. The initial step to this analysis is to map the

resources and uses that must be protected according to the requirements Goal 19 and the TSP, which are: areas that are important to the biological diversity and functional integrity of the marine ecosystem; important marine habitat; and areas important to fisheries, both recreational and commercial. In addition, existing beneficial uses such as navigation, food production, recreation, scientific research, aesthetic enjoyment and other uses of the seafloor need to be mapped and considered. The acquisition of data and analysis will continue through the summer of 2011, and will be used to delineate where ocean renewable energy sites might or might not be appropriate.

OPAC will use the feedback from these work sessions as it considers the results of the spatial analysis and prepares draft plan options that will go through a similar public review process this fall. OPAC will then forward its recommendation for the map plan amendment to the department and LCDC. TSPAC will use the spatial analysis, information gathered through the public review process, the OPAC recommendations, and other information it may consider pertinent, to develop its own set of recommendations or options. This is the same type of review and referral process that was used successfully in the development and adoption of the TSP Part Five amendment. All of the OPAC/TSPWG and LCDC/TSPAC meetings are open to the public and input from interested parties and citizens are being encouraged throughout the process. As with Part Five of the TSP, when this process is completed, the commission will be asked to consider an amendment to the Territorial Sea Plan that will adopt the maps by reference.

#### **IV. DEPARTMENT RECOMMENDATION**

The department recommends that the commission review the list of members on the Territorial Sea Plan Advisory Committee and appoint new members.

Proposed Motion: I move that the commission replace and appoint members to the Territorial Sea Plan Advisory Committee in accordance with the list provided above in Section II:  
Recommended Appointments.

#### **ATTACHMENTS**

- A. A Citizens Guide to the Territorial Sea Plan Amendment Process (August 2011)
- B. TSPAC membership list

## **A Citizen's Guide to the Territorial Sea Plan Amendment Process** Department of Land Conservation and Development Coastal Management Program August 1, 2011

The State of Oregon, with the assistance of a wide range of citizens, communities, and other organizations, is amending its Territorial Sea Plan. After several years of effort the process is at a crucial stage that requires even greater informed feedback from the public.

### **What is the Territorial Sea Plan?**

The 1991 Oregon Legislature amended ORS chapter 196 to establish the Ocean Policy Advisory Council (OPAC) made up of a variety of ocean stakeholders, local governments, and state agencies, and charged it with providing the Governor and state agencies with policy advice on ocean matters. The legislation gave the Department of Land Conservation and Development (DLCD), which includes the state's federally-approved coastal management program, primary responsibility for ocean planning and providing assistance to OPAC. One of OPAC's basic duties was to prepare a Territorial Sea Plan (TSP) for managing the resources and activities in the state's territorial sea from 0-3 nautical miles. The initial version of the TSP was completed in 1994, providing detailed guidance to state and federal agencies in managing uses within Oregon's territorial sea. OPAC did not address many ocean-resource management issues through the initial plan, but was given the ability to amend the TSP when necessary to deal with new concerns as they occurred. The plan can be found on the department's website at: [http://www.oregon.gov/LCD/OCMP/Ocean\\_TSP.shtml](http://www.oregon.gov/LCD/OCMP/Ocean_TSP.shtml).

### **Why is the Plan being amended?**

The need to amend the TSP arose in 2007 when a number of wave energy companies submitted preliminary permit applications to the Federal Energy Regulatory Commission (FERC) to develop energy production facilities within ocean fishing areas off the Oregon coast. At the same time, a system of marine reserves was being proposed for the territorial sea. The resulting high degree of concern in coastal communities and among the fishing industry culminated in a meeting between coastal legislators, fishing industry representatives and Governor Kulongoski. On March 26, 2008, the governor issued Executive Order No. 08-07 directing agencies to "Protect Coastal Communities in Siting Marine Reserves and Wave Energy Projects", and DLCD to "seek recommendations from OPAC concerning appropriate amendments to Oregon's Territorial Sea Plan, reflecting comprehensive plan provisions on wave energy siting projects."

On that same day, the State of Oregon and FERC signed a Memorandum of Understanding (MOU) to "coordinate the procedures and schedules for review of wave energy projects in the Territorial Sea of Oregon and to ensure that there is a coordinated review of proposed wave energy projects that is responsive to environmental, economic, and cultural concerns while

providing a timely, stable, and predictable means for developers of such projects to seek necessary approvals”. In the MOU, FERC agreed to “consider the extent to which the proposed project is consistent with the Oregon plan” when issuing a permit or license and to “consider any terms and conditions that are recommended by Oregon under section (10)(a)(3) of the FPA [Federal Power Act] to ensure consistency with the Oregon Plan”. So it became important for Oregon to complete the plan directed by the Governor.

### **What has been done so far?**

**Phase I:** The first step was to create a new chapter for the TSP for regulating and managing ocean renewable energy, and for collecting data and information for siting projects. Phase I of this new chapter, which includes policies, review and evaluation standards, coordination process, and operational plan requirements for ocean renewable energy development, was completed in November 2009 when the Oregon Land Conservation and Development Commission (LCDC) adopted Part Five of the Territorial Sea Plan for the Development of Renewable Energy Facilities or Other Related Structures, Equipment or Facilities. Phase I was accomplished through the recommendations of OPAC and LCDC’s Territorial Sea Plan Advisory Committee.

### **What is being done now?**

**Phase II:** The second phase is centered on a public process to conduct a spatial analysis of existing ocean uses and ecological resources to identify and designate specific areas within the territorial sea that may be appropriate for renewable energy development. This process will be aided by the use of digital data that can be used in a computer to create map overlays and analysis of different types of mapped information. The first step is to map the resources and uses that must be protected according to Goal 19 Ocean Resources and the Territorial Sea Plan, which are: areas that are important to the biological diversity and functional integrity of the marine ecosystem; important marine habitat; and areas important to fisheries, both recreational and commercial. In addition, existing beneficial uses such as navigation, food production, recreation, scientific research, aesthetic enjoyment and other uses of the seafloor need to be mapped and considered. Maps of resources and uses will be used in numerous community meetings to help to create new maps showing where ocean renewable energy sites might or might not be appropriate. In the end, these maps will be incorporated into the TSP.

### **Who is doing the work?**

DLCD is leading this effort along with the OPAC and other state agencies with authority to manage the state’s ocean resources but is doing so with a great deal of input and assistance from the general public, fishermen, coastal communities, and other interested parties. The Phase II process is being guided by the OPAC Territorial Sea Plan Working Group and the LCDC Territorial Sea Plan Advisory Committee, both of which will conduct a series of public meetings and workshops to review maps and analyze the various alternatives and options for specific areas. Information about those events will be posted on the OPAC website, and at <http://www.OregonOcean.info>.

### **What type of information is being used?**

DLCD has been working with fishermen, scientists, and others to collect a variety of data needed for the public spatial planning work of Phase II. Data projects include:

*Fishing Effort Maps:* The Territorial Sea Plan and Goal 19 Ocean Resources require state agencies to protect areas important to fisheries, including commercial, charter and recreational for different sectors and ports. To apply this protection through the planning process, the state must be able to locate these areas spatially using data derived and contributed by fishermen and fishing communities. These data are being acquired through a series of projects conducted by Ecotrust, a non-profit research and consulting organization, working with coastal port fisheries groups. This effort was initiated by DLCD in late 2008 through a pilot project with the Southern Oregon Ocean Resources Coalition (SOORC) in Coos Bay. This work was facilitated by the Oregon Coastal Zone Management Association (OCZMA) through a contract from DLCD using federal Coastal Zone Management §309 funds. Subsequent work with other fisheries groups was supported with funds from the Oregon Wave Energy Trust (OWET) and Packard Foundation. All the work with fishermen used the methodology and protocols prescribed by the DLCD based on the successful SOORC project. Those protocols were specifically designed to protect the confidentiality of the data from individual fishers while allowing that data to be compiled into aggregate map overlays representing the combined level of effort for each port.

The fishing industry has created a nonprofit organization, Fishermen's Information Service for Housing Confidential Release and Essential Distribution (FISHCRED), to serve as a central decision-making entity to guide, review, and approve of how fisheries data will be presented, utilized, or applied in the TSP and other planning processes. The organization is composed of a fifteen-member board of directors representing Oregon coastal ports and fishing sectors. The group seeks to ensure that the diversity of coastal commercial fishing interests are represented in Oregon's MSP efforts.

*Marine Ecosystem Maps:* The DLCD is working with Oregon Department of Fish and Wildlife (ODFW) and the National Oceanic and Atmospheric Administration (NOAA) to inventory and acquire the data about areas important for the protection of marine ecosystem function, diversity and marine habitat. This work is being funded by a federal Coastal Zone Management §309 grant from DLCD. ODFW will compile the relevant data from state and federal resource agencies and other sources such as regional research programs and universities. This work will be substantially completed and the products assimilated into MarineMap by the end of September 2011.

*Seafloor Mapping:* In 2009, the state legislature appropriated \$1 million in unused insurance settlement funds from the *New Carissa* shipwreck to the Department of State Lands to conduct seafloor mapping. That investment was matched by \$4 million from NOAA and the mapping work was conducted through a collaborative effort with Oregon State University. The seafloor mapping data will provide detailed information on the bathymetry and geologic makeup of the territorial sea. By the end of 2010, approximately 50% of the state's territorial sea had been mapped with current funds. Additional federal funds are being sought to complete the mapping.

*Recreational Use Survey:* The Oregon Chapter of the Surfrider Foundation worked with Ecotrust to conduct research to identify and locate non-fishing recreational activities, such as ocean sports, whale watching, and other beach related uses.

*Existing Beneficial Uses:* Technical staff at DLCDC are working with a variety of data providers to develop map overlays of existing uses in the territorial sea including navigation channels and aids, dredge material disposal sites, telecommunication cables, pipelines and outfalls. The DLCDC is also supporting a project to map the growing number of operational scientific instrumentation, such as transmission cables, data nodes, and other facilities, that have been placed in the ocean to support scientific research and monitoring programs.

*Multi Purpose Marine Cadastre:* A Bureau of Ocean Energy Management, Regulation and Enforcement (BOEMRE) and NOAA Coastal Services Center regional-scale spatial database that includes jurisdictional boundaries, marine habitat, seafloor, existing uses and other data layers for the outer continental shelf. See: <http://www.marinecadastre.gov/default.aspx>.

### **What are the standards that guide the process?**

Statewide Planning Goal 19 Ocean Resources establishes the basic policies and requirements that state agencies must follow when making decisions about the use of the state's territorial sea. The purpose of Goal 19 is "to conserve marine resources and ecological functions for the purpose of providing long-term ecological, economic, and social value and benefits to future generations". To achieve that objective, Goal 19 requires that state and federal agencies must take actions that give a higher priority to the protection of renewable marine resources – i.e., living marine organisms – than to the development of non-renewable ocean resources. The implementation requirements of Goal 19 direct state agencies to protect specific renewable marine resources, including the marine ecosystem and areas important to fisheries, and require a number of factors to be balanced when determining areas suitable for ocean renewable energy development.

### **How is the process being conducted and how can the public participate?**

In Phase I, OPAC created a Territorial Sea Plan Working Group (TSPWG) to develop recommendations for the TSP amendment. The TSPWG has designed a public involvement and review process for Phase II that will involve many public meetings in communities from Astoria to Brookings as well as some non-coastal locations. The first round of work sessions was conducted this spring. During those work sessions, the resource data and spatial overlays that the TSPWG will be considering, and the analytical and map display tools it will use, were presented to the public. The department set up online systems to collect public input and comments, along with those collected at the work sessions and by mail. Those comments are accessible on the website: <http://www.OregonOcean.info>.

The second round of public work sessions will begin in the fall of 2011, after which the TSPWG will present its findings, draft maps and other planning options to OPAC for consideration. OPAC will then prepare a draft plan amendment and submit it to the LCDC for their consideration. The LCDC will then ask its Territorial Sea Plan Advisory Committee (TSPAC), also formed during Phase I, to conduct public meetings to review the OPAC findings and draft plan amendment, and to develop a set of recommendations or options. The TSPAC meetings are likely to occur early in 2012. All of the OPAC /TSPWG and LCDC /TSPAC meetings will be open to the public and input from interested parties and citizens will be encouraged throughout the process.

**What will the outcome of the process be and when will it be concluded?**

The LCDC will use the OPAC and TSPAC recommendations to produce a series of maps and other information for inclusion in the TSP. Those maps will have two functions. First, they will identify resources, areas and uses that need to be protected or considered when state and federal agencies are making decisions to allow a new use of the territorial sea. Second they will designate areas where ocean renewable energy development may occur, and under what conditions.

**How to keep informed on the process and where to find more information:**

The DLCD has created a website to provide a calendar of events and meetings and provide information being used or produced at those meetings. See <http://www.OregonOcean.info>.

In addition, DLCD and Ecotrust have developed an interactive on-line mapping system called Oregon MarineMap for use during the public review process. It is an easy-to-use tool that allows anyone to visualize and analyze a variety of marine spatial data. See <http://www.OregonMarineMap.org>.

Contact: Paul Klarin at (503)373-0050 ext 249 or email [paul.klarin@state.or.us](mailto:paul.klarin@state.or.us)

## How you can participate in and track the progress of the Territorial Sea Plan process

*The purpose of the Ocean Policy Advisory Council (OPAC) Territorial Sea Plan Working Group sessions is to share information and collect public input that will be used by OPAC to develop a draft recommendation for locating renewable energy development in Oregon's territorial sea (0-3 nautical miles).*

There will be many opportunities for you to participate in this planning process and a variety of ways to submit your ideas, concerns, and responses about how the plan is being developed. All comments are welcome. You may be concerned with state policies used to guide the planning process. You may want to provide information or know more about a particular area or location. Or you may want to provide input on the various types of data and maps used in developing the plan. All of these comments will be useful in assisting OPAC and its Territorial Sea Plan (TSP) Working Group, and the Land Conservation and Development Commission (LCDC) and its TSP Advisory Committee, in their deliberations about planning options.

### **ATTEND AND PARTICIPATE IN A PUBLIC MEETING**

The most direct way to be involved is by attending and participating in any of the meetings listed below that will be held during the TSP planning process. At any and all of these meetings you will have an opportunity to provide comments, either verbally or in writing, to the working group, council, committee, or commission conducting the meeting.

- **OPAC TSP Working Group**

The OPAC TSP Working Group will be conducting a series of work sessions in coastal communities and some non-coastal locations over the next several months where the public is invited to learn about the TSP planning process and review the information that is being used to develop the draft plan. If you attend the work sessions, you will have an opportunity at each meeting to provide the working group with input about the policies, process, and information being used to develop the draft plan. The TSP Working Group will conduct the work sessions in two rounds. The first round was held in late spring at Coos Bay, Brookings, Port Orford, Newport, Garibaldi, Astoria and Salem. The second will be conducted when data products have been completed and integrated into MarineMap, beginning in early fall 2011. At the end of the work sessions, the TSP Working Group will forward a proposed draft plan to OPAC for its review. The meeting dates and locations for the second round of work sessions will be scheduled by the TSPWG to begin in October and will be available on the calendar at: <http://www.OregonOcean.info>.

- **Ocean Policy Advisory Council**

After the TSP Working Group concludes its work sessions, it will forward a proposed draft plan to OPAC, which will review the plan and send a draft recommendation to the LCDC. OPAC plays a key coordination role on behalf of local governments, with two elected county officials and one coastal city official as members. OPAC will take public comment during its meetings in order to prepare a draft recommendation to the LCDC. OPAC member and contact information, along with meeting materials, are posted on: [http://www.oregon.gov/LCD/OPAC/about\\_us.shtml](http://www.oregon.gov/LCD/OPAC/about_us.shtml) or <http://www.OregonOcean.info>

- **LCDC TSP Advisory Committee**

The LCDC is required to formally adopt the proposed amendment into the Territorial Sea Plan by administrative rule. Once the LCDC receives the draft recommendation from OPAC, in early 2012, it will convene the TSP Advisory Committee to hold public meetings, gather additional input from the public and all interested parties, and provide a recommendation on the proposed plan to the Commission. Meetings of the TSP Advisory Committee are open to the public. LCDC will ensure that local governments are included in the process. You can track the meetings at: [http://www.oregon.gov/LCD/OPAC/about\\_us.shtml](http://www.oregon.gov/LCD/OPAC/about_us.shtml) or <http://www.OregonOcean.info>

- **LCDC Rule Adoption**

By law, the LCDC is required to hold its own public hearings on the proposed plan, both on the coast and at the Commission meeting. These will be additional opportunities, likely in early 2012, for members of the public, local governments, and interested parties to provide input and comments on the proposed plan. The LCDC is required to adopt findings that specify the plan is compatible with Statewide Planning Goal 19 (Ocean Resources) and with local government comprehensive plans.

## **CONTACT US DIRECTLY**

To facilitate the collection of public input at any stage of the TSP planning process, the Department of Land Conservation and Development (DLCD) has set up a special public comment e-mail address at: [TSP.comments@state.or.us](mailto:TSP.comments@state.or.us)

In addition, you may contact the state agency staff that work with OPAC and the LCDC:

Paul Klarin (DLCD)	<a href="mailto:paul.klarin@state.or.us">paul.klarin@state.or.us</a>	(503) 373-0050 ext. 249
Andy Lanier (DLCD)	<a href="mailto:andy.lanier@state.or.us">andy.lanier@state.or.us</a>	
Todd Hallenbeck (DLCD)	<a href="mailto:todd.r.hallenbeck@state.or.us">todd.r.hallenbeck@state.or.us</a>	
Dave Fox (ODFW)	<a href="mailto:david.s.fox@state.or.us">david.s.fox@state.or.us</a>	

## **GO ONLINE**

We are taking advantage of the Internet to help you stay abreast of information and provide comments on the TSP planning process.

- We post meeting schedules, locations, and background information on <http://www.OregonOcean.info>. A simple map function on this site allows you to find the planning grid cell number for any location.
- For maps and information about specific ocean areas go to Oregon MarineMap at <http://oregon.marinemap.org> where you will find a wide variety of mapped information available for viewing and analyzing via a grid system of one-mile-square cells, each with a unique number.
- You can send an e-mail to [TSP.comments@state.or.us](mailto:TSP.comments@state.or.us) with any general comments, or with the grid cell number and information you want to submit about a particular location.

## **Local Governments and Ocean Renewable Energy Development**

In addition to participating in the upcoming TSP planning process, coastal local governments may also want to review their comprehensive plans and ordinances, with an eye toward the time when an ocean renewable energy developer may seek approval for siting part of its operation on-shore, thereby requiring local land use approvals.

Local government land use regulations are an important part of the state's approval process for projects in the coastal zone that require a state or federal permit. An applicant for a state or federal permit is required to certify that the project is consistent with local land use regulations. This will be the case for on-shore portions of ocean renewable energy projects.

DLCD Coastal Field Services representatives Dave Perry (south coast: [dave.perry@state.or.us](mailto:dave.perry@state.or.us)) and Matt Spangler (north coast: [matt.spangler@state.or.us](mailto:matt.spangler@state.or.us)) are available to assist local governments in assessing their situation to determine what amendments may be needed to their comprehensive plans and ordinances to better account for ocean renewable energy development.
