LUBA No. 86-025

FINAL OPINION  
AND ORDER

12 Appeal from Clatsop County.

13 Steven L. Pfeiffer, Portland, filed the petition for review  
14 and argued on behalf of petitioners. With him on the brief  
were Sullivan, Sherton, Pfeiffer, Johnson and Kloos.

15 Dan Van Thiel, Astoria, filed a response brief and argued  
16 on behalf of Respondent-Participant Bayview Transit, Inc.

17 No appearance by Clatsop County.

18 DuBAY, Referee; KRESSEL, Chief Referee; BAGG, Referee,  
participated in the decision.

19 REMANDED

08/08/86

20 You are entitled to judicial review of this Order.  
21 Judicial review is governed by the provisions of ORS 197.850.  
22

1 Opinion by DuBay.

2 NATURE OF THE DECISION

3 This is an appeal of the county's decision to amend its  
4 comprehensive plan and zoning map designation of two parcels.  
5 The decision changed the plan map designation from Conservation  
6 Forest Lands to Conservation Other Resources. The zoning  
7 designation was changed from Forest-80 (F-80) to Quarry and  
8 Mining (QM). To make these changes, the county also took an  
9 exception to Statewide Goal 4.

10 FACTS

11 The applicant, Bayview Transit, Inc. (Bayview), seeks  
12 approval of the plan and zone changes to allow quarrying,  
13 crushing and stockpiling of aggregate materials for nonforest  
14 uses. Mining would take place on 20 acres owned by Crown  
15 Zellerbach. Another 10 acre tract, also owned by Crown  
16 Zellerbach, would be used for stockpiling. The stockpile tract  
17 is near the quarry. Both tracts are forest lands subject to  
18 Statewide Goal 4. Although the site had been used by the owner  
19 as a source of material for logging roads, the applicant  
20 proposes to use rock for nonforest roads.

21 The operation would be year-round, most intensively during  
22 the summer. Approximately 10,000 to 50,000 cubic yards of rock  
23 are expected to be mined each year. The operation will include  
24 rock crushing and blasting. The applicant also expects to  
25 construct an asphalt mixing plant on the site.

1 FIRST ASSIGNMENT OF ERROR

2 Petitioners challenge the county's exception to Goal 4.  
3 The county found an exception is warranted under the four  
4 criteria in ORS 197.732(1)(c). This is commonly called a  
5 "reasons" exception. A reasons exception requires compliance  
6 with four criteria:

7 "(A) Reasons justify why the state policy embodied in  
8 the applicable goals should not apply;

9 "(B) Areas which do not require a new exception cannot  
reasonably accommodate the use;

10 (C) The long term environmental, economic, social and  
11 energy consequences resulting from the use at the  
12 proposed site with measures designed to reduce  
13 adverse impacts are not significantly more  
adverse than would typically result from the same  
proposal being located in areas requiring a goal  
exception other than the proposed site; and

14 (D) The proposed uses are compatible with other  
15 adjacent uses or will be so rendered through  
measures designed to reduce adverse impacts."

16 Respondent argues that, even though the county granted an  
17 exception, no Goal 4 exception is necessary to rezone the land  
18 QM. It alleges that quarrying aggregate is allowed by ORS  
19 215.213. Citing SEPA v. Washington County, 4 Or LUBA 236  
20 (1981) and Westerberg v. Linn County, 7 Or LUBA 7 (1982),  
21 respondent says no exception is required for uses described in  
22 ORS 215.213 on resource lands.

23 Respondent is wrong. In SEPA, a quarry was proposed for  
24 lands subject to both Goals 3 and 4. We held the findings were  
25 inadequate to show no exception was required. In addition, the  
26 opinion noted that the Land Conservation and Development

1 Commission (LCDC) determined an exception to Goal 4 is not  
2 required if the use is consistent with forest uses or if farm  
3 and nonfarm uses described in ORS 215.203-215.213 will retain  
4 and protect the existing and potential forest uses.<sup>1</sup> Mining  
5 and processing aggregate is listed as a nonfarm use in ORS  
6 215.213 (now ORS 215.283). We note, however, that after SEPA,  
7 supra, was decided, LCDC adopted an administrative rule that  
8 states:

9 "...an exception to Goal 4 'forest lands' is not  
10 required for farm uses allowed under ORS 215.203."  
11 OAR 660-04-010(1)(b). (Emphasis supplied.)

12 This rule does not eliminate the need for an exception to  
13 Goal 4 to accommodate nonfarm uses described in ORS 215.213  
14 (now ORS 215.283). We follow the agency's current rule rather  
15 than the earlier statement in SEPA. An exception from Goal 4  
16 is required for nonfarm or nonforest uses on forest lands.  
17 Accordingly, an exception to Goal 4 is required for this quarry.

18 Petitioners first challenge the county's compliance with  
19 the alternative site criterion in ORS 197.732(1)(c)(B) as  
20 interpreted by LCDC in OAR 660-04-020. Generally, the rule  
21 phrases the critical question to be whether the proposed use  
22 can reasonably be accommodated on nonresource land that would  
23 not require an exception. In addition, OAR 660-04-020 states  
24 an exception may be justifiable in order to take advantage of  
25 needed resources available only at a specific location. Under  
26 the rule, the findings must show:

"...a resource upon which the proposed use or activity

1 is dependent can be reasonably obtained only at the  
2 proposed exception site and the use or activity  
3 requires a location near the resource. An exception  
4 based on this subsection must include an analysis of  
5 the market area to be served by the proposed use or  
6 activity. That analysis must demonstrate that the  
7 proposed exception site is the only one within that  
8 market area at which the resource depended upon can  
9 reasonably be obtained." OAR 660-04-022(1)(b).

6 Petitioners allege the findings are both inadequate and  
7 lack evidentiary support to demonstrate that the needed mineral  
8 resource cannot reasonably be obtained elsewhere. Three quarry  
9 sites are discussed by petitioners to make their point, the  
10 Johnson, Darling and Ordway quarries.

11 The Johnson Quarry

12 Petitioners challenge the county's basis for rejecting the  
13 Johnson quarry as a suitable alternative site. The county's  
14 reasons are:

- 15 (1) The smaller crushed aggregate material needed for  
16 asphalt has not been produced at the Johnson  
quarry and is not stockpiled there.<sup>2</sup>
- 17 (2) The applicant desires to mine and crush the  
18 required grades of rock to have complete quality  
control.
- 19 (3) The applicant can produce crushed rock at less  
20 cost than the cost of purchasing crushed rock  
from other suppliers.

21 Petitioners contradict the first reason. They say  
22 aggregate material from the Johnson quarry has been used to  
23 produce the finer grades of rock necessary for asphalt and that  
24 the product met State of Oregon Highway Department  
25 specifications.<sup>3</sup> Because demand for these grades is small,  
26 petitioners say the fine grades are not stockpiled at the

1 quarry.

2 The record supports petitioners' allegations. The record  
3 includes laboratory test reports on Oregon State Highway  
4 Division forms indicating aggregate samples from the Johnson  
5 quarry met Highway Division specifications for the critical  
6 finer grades. Record at 46-48. The only evidence supporting  
7 the challenged finding relates to stocking fine grades; it does  
8 not address the suitability of the aggregate resource for fine  
9 grade crushed rock. In sum, the only evidence about whether  
10 the fine grades can be produced from the aggregate found at the  
11 Johnson quarry site is the laboratory test reports showing that  
12 the crushed rock from the Johnson Pit met state standards for  
13 the critical grades. Under these circumstances, we conclude no  
14 substantial evidence supports the finding that the grades of  
15 rock necessary for asphalt on state highways cannot be produced  
16 from the Johnson quarry.

17 The county's findings concerning the stockpiling of fine  
18 grades of crushed rock and the applicant's desire to control  
19 quality do not address whether the resource, i.e., a suitable  
20 rock deposit, is available at the Johnson quarry. Instead they  
21 address concerns about the characteristics of the product,  
22 i.e., crushed rock, and the efficiency of the crushing  
23 operations. These factors are not relevant to the inquiry  
24 whether aggregate deposits suitable for production of fine  
25 grade crushed rock is reasonably available at a site not  
26 requiring an exception.

1 The county's findings compare the estimated cost of crushed  
2 rock produced at the proposed site and at the Johnson quarry.  
3 This is an appropriate consideration. Economic factors can be  
4 considered in determining that the proposed use cannot be  
5 accommodated in other areas. OAR 660-04-020(2)(b)(B).  
6 Petitioners claim no substantial evidence supports the finding  
7 that the applicant can produce crushed rock for \$4.20 per cubic  
8 yard at the proposal site. We agree.

9 Respondent does not cite to any evidence in the record  
10 supporting the challenged finding. When findings critical to  
11 the decision are challenged for lack of evidentiary support,  
12 the defenders of the decision must point out where the  
13 supporting evidence may be located in the record.<sup>4</sup> 1000  
14 Friends of Oregon v. Washington Co., 13 Or LUBA 65, 67-68  
15 (1985). See also City of Salem v. Families for Responsible  
16 Government, 298 Or 574, 684 P2d 965 (1985). Accordingly, we  
17 sustain the evidentiary challenge to this finding.

18 Darling and Ordway Quarries

19 Petitioners allege the county's findings regarding the  
20 Darling and Ordway quarries are not supported by substantial  
21 evidence. The county concluded neither quarry contained rock  
22 deposits comparable in quality and quantity to the proposed  
23 quarry site. In addition, the county found the Darling quarry  
24 is a pre-existing, nonconforming use, and the Ordway quarry is  
25 operating under a conditional use permit restricting operation  
26 to certain months of the year. The county concluded these

1 quarries are not suitable alternatives to the proposed quarry  
2 site on two grounds:

3 (1) The rock deposits are inadequate compared to the  
4 proposed site, and

5 (2) One site would require an exception and the other  
6 a conditional use permit modification to expand  
the use at these two quarries to accommodate the  
applicant's requirements.

7 We agree with petitioners that no substantial evidence  
8 supports these conclusions. Respondent cites no evidence  
9 shedding any light on the quantity or quality of rock deposits  
10 available at the Darling and Ordway quarries, nor any  
11 comparison of production volumes at these quarries with volumes  
12 of rock required by the applicant. See Zusman v. Clackamas  
13 County Board of Commissioners, 13 Or LUBA 39 (1985). Without  
14 evidence in the record on which a reasonable person could base  
15 a conclusion that Darling and Ordway quarries do not have rock  
16 deposits in the quantity and quality needed by the applicant  
17 and evidence demonstrating why an exception would be necessary  
18 to allow applicant's proposed use at these sites, the findings  
19 do not meet the substantial evidence test. Braidwood v.  
20 Portland, 24 Or App 477, 546 P2d 777 (1976).

21 The lack of evidentiary support for the county's findings  
22 addressing the alternative sites criteria in ORS  
23 197.732(1)(c)(B) is grounds for a remand.

24 Petitioners next argue the county's findings are not  
25 adequate to show compliance with ORS 197.732(1)(c)(C). This  
26 provision states:

1 "The long term environmental, economic, social and  
2 energy consequences resulting from the use at the  
3 proposed site with measures designed to reduce adverse  
4 impacts are not significantly more adverse than would  
5 typically result from the same proposal being located  
6 in areas requiring a goal exception other than the  
7 proposed site;"

8 This criterion requires comparison of the consequences of  
9 use at the proposed site vis-a-vis the consequences of locating  
10 the use in other suitable areas which would also require an  
11 exception. Petitioners claim the county failed to satisfy this  
12 criterion because the characteristics of other quarries in the  
13 vicinity were not described, and the environmental, economic,  
14 social and energy (ESEE) consequences of the proposed use at  
15 these other quarry sites were not compared with the proposed  
16 site.

17 The county found five other quarry sites are in the  
18 vicinity in addition to the Johnson, Darling and Ordway  
19 quarries. All five are in the F-80 zone and would require an  
20 exception for rock quarrying for nonforest purposes. The  
21 findings neither describe these five quarries nor analyze their  
22 suitability for the proposed use.

23 The decision addresses this criterion with several findings  
24 regarding the ESEE consequences of the proposed quarry  
25 operation at the site selected by the applicant. Record at  
26 248-253. However, no findings compare the ESEE consequences  
resulting from use at the proposed site with the ESEE  
consequences which "would typically result from the same  
proposal being located in areas requiring a goal exception

1 other than the proposed site" as required by ORS  
2 197.732(1)(c)(C).

3 Respondent advances two bases for the county's position.  
4 We reject both, and, as set forth below, hold the county's  
5 findings do not show compliance with the "consequences"  
6 criterion.

7 First, respondent claims the ramifications of quarry use at  
8 the five sites in the F-80 zone need not be considered because  
9 suitable quantity and quality rock deposits are not available  
10 at the five sites. If the other sites are not suitable for the  
11 proposed use because the needed resource is not available,  
12 respondent's defense to this challenge might have merit.  
13 However, as discussed above in connection with the Darling and  
14 Ordway quarries, no evidence in the record supports the  
15 county's conclusion about the quantity or quality of rock at  
16 the five other locations. Without evidence supporting the  
17 county's conclusion about these other rock deposits, there is  
18 no basis for the county's conclusion about the quantity and  
19 quality of rock at the five alternate sites.

20 Respondent also contends analysis of the consequences  
21 resulting from quarry use at the other sites is excused under  
22 OAR 660-04-020(2)(c). The portion of the rule relied on by  
23 respondent states:

24 "A detailed evaluation of specific alternative sites  
25 is not required unless such sites are specifically  
26 described with facts to support the assertion that the  
sites have significantly fewer adverse impacts during  
the local exceptions proceeding."

1  
2 Respondent argues this rule prevents opponents from raising  
3 questions on appeal about specific alternative sites without  
4 first identifying the alternative sites and describing their  
5 characteristics in the local proceedings.

6 We agree that the rule has the effect respondent  
7 describes. We do not agree the rule excuses a jurisdiction  
8 from making findings that show compliance with ORS  
9 197.732(1)(c)(C). The statute requires consideration of  
10 impacts that would "typically result" from the proposed use in  
11 other areas requiring an exception. Although detailed analysis  
12 of specific alternative sites may be excused in the  
13 circumstances described in OAR 660-04-020(2)(c), the statute  
14 and the rule require a description of the characteristics of  
15 alternative areas and reasons why the consequences from use at  
16 one site are preferred.<sup>5</sup>

17 The county identified five quarry sites but did not  
18 describe their characteristics other than stating they are  
19 located in the F-80 zone. The county did not even generally  
20 describe the consequences that would typically result from the  
21 proposed use at these five quarries or any other land in the  
22 F-80 zone. For these reasons, we sustain petitioners' claim on  
23 this issue.

24 Petitioners next argue the county failed to show compliance  
25 with ORS 197.732(1)(c)(D). Petitioners allege that the county  
26 failed to assess the compatibility of the proposed use with

1 nearby residential uses. Petitioners note there are five  
2 residences within 3,000 feet of the proposed quarry and one  
3 home is within 2,000 feet of the quarry and within 800 feet of  
4 the stockpile. According to petitioners, the county's findings  
5 address the compatibility of the proposed quarry use with  
6 adjacent forest uses while ignoring these residences on  
7 adjacent tracts. They say the findings are not adequate to  
8 satisfy the compatibility criterion.

9 The findings describe nearby residential use as follows:

10 "There are five residences within 3,000 feet of a  
11 proposed quarry. Four of these are located within the  
12 AF-20 zone and the other is within a GC General  
Commercial zone. All of these residences are within  
150 feet of Highway 26/101 Intersection."

13 "The nearest residence, Otto and Pat Jensen's mobile  
14 home, is approximately 2,000 feet from the proposed  
quarry site and 800 feet from the proposed stockpile  
15 site. The Jensens have a conditional use permit to  
allow a nonforest dwelling within an AF-20 Forest  
16 zone." Record at 350.

17 The county made no findings about the compatibility of the  
18 proposed use with these homes. The county did make findings  
19 concerning compatibility with adjacent forest land uses.

20 Respondent claims the exception criteria require only that  
21 compatibility with adjacent resource uses must be addressed.

22 We disagree with such a narrow interpretation.

23 The statute, ORS 197.732(1)(c)(D), refers only to "adjacent  
24 uses." The agency interpretive rule is ambiguous. It states  
25 in part:

26 "The exception shall describe how the proposed use  
will be rendered compatible with adjacent land uses."

1 The exception shall demonstrate that the proposed use  
2 is situated in such a manner as to be compatible with  
3 surrounding natural resources and resource management  
4 or production practices." (Emphasis added) OAR  
5 660-04-020(2)(d).

6 We do not, as respondent apparently does, read the second  
7 sentence quoted above as modifying the first sentence by  
8 restricting the scope of "adjacent land uses" to "surrounding  
9 natural resource uses and practices." Rather, the rule  
10 requires consideration of compatibility with both adjacent uses  
11 and surrounding natural resources and practices.

12 We also reject respondent's claim that the compatibility  
13 criterion is satisfied because the county "received and  
14 reviewed a substantial amount of testimony upon potential noise  
15 and dust impacts before reaching conclusions outlined (in) the  
16 record." Respondent's Brief at 11. ORS 197.732(4) clearly  
17 requires findings of fact and a statement of reasons  
18 demonstrating the exception standards have been met.<sup>6</sup> Unless  
19 the county makes such findings, we are unable to determine  
20 whether the decision meets the applicable criteria.<sup>7</sup>

21 Sunnyside Neighborhood v. Clackamas Co. Comm., 280 Or 3, 569  
22 P2d 1063 (1977).

23 Petitioners' claim about failure to address compatibility  
24 with the residences is sustained.

25 This assignment of error is sustained. To approve the  
26 application the county must make findings supported by  
substantial evidence that the rock deposits suitable for making  
the grades of crushed rock in asphalt production are not

1 available at the Johnson, Darling and Ordway quarries. In  
2 addition, the county should make findings demonstrating  
3 compliance with ORS 197.732(1)(c)(C) and (D) to correct the  
4 errors identified above.

5 SECOND ASSIGNMENT OF ERROR

6 Petitioners allege that QM zoning will allow uses that were  
7 not authorized by the exception to Goal 4. They say the  
8 county's exception justified nonforest quarry, crushing,  
9 stockpiling and asphalt plant uses. In addition to those uses,  
10 the QM zone also authorizes concrete and ready mix-plants, as  
11 well as offices and warehouses appropriate for all uses  
12 permitted in the district. Petitioners rely on OAR  
13 660-04-018(3)(a). When a local government takes an exception  
14 under ORS 197.732(1)(c), this rule requires that plan and zone  
15 designations "must limit the uses and activities to only those  
16 uses and activities which are justified in the exception."<sup>8</sup>

17 The rule reflects the statutory language that reasons  
18 exceptions under ORS 197.732(1)(c) take account of the  
19 consequences and compatibility of the "proposed use." However,  
20 we do not read the statute or the rule to mean that a reasons  
21 exception for the zone change is not valid unless findings  
22 measure each specific use allowed in the zone against the  
23 criterion in ORS 197.732(1)(c). The purpose of the rule is to  
24 prevent development which is more inconsistent with adjacent  
25 uses than development contemplated when a reasons exception is  
26 originally taken. This interpretation would permit other uses

1 of the same type which are not more inconsistent with adjacent  
2 uses than the uses contemplated in the exception process.

3 The uses allowed in the QM zone claimed by petitioners to  
4 violate the rule are uses either accessory to or associated  
5 with aggregate mining and processing. Petitioners do not  
6 allege these uses are more intensive, inconsistent or  
7 incompatible with adjacent uses than the rock quarrying,  
8 crushing and processing into asphalt proposed by the  
9 applicant. In sum, the uses allowed in the QM zone are not  
10 beyond the scope of uses contemplated in the county's exception  
11 to Goal 4. This assignment of error is denied.

12 THIRD ASSIGNMENT OF ERROR

13 Petitioners allege the decision violates Statewide Planning  
14 Goal 5, Open Space, Scenic and Historic Areas and Natural  
15 Resources. According to petitioners, the county neither made  
16 findings addressing Goal 5 nor analyzed whether the proposed  
17 use conflicts with fish habitat protected by Goal 5.

18 Petitioners say that although evidence in the record shows  
19 Circle and Square Creeks in the area of the proposed use are  
20 anadromous fish habitat, the county did not apply the criteria  
21 and procedures in Statewide Goal 5 and the Land Conservation  
22 and Development Commission's Goal 5 rules.

23 Whether Goal 5 should be applied depends upon whether the  
24 county's acknowledged plan inventory lists resources subject to  
25 Goal 5 that may be affected by the zone and plan change under  
26 consideration.<sup>9</sup>

1           Petitioners argue that the county's plan is ambiguous and  
2 does not identify Square and Circle Creeks as fish habitat  
3 streams subject to Goal 5. Respondent does not contend the two  
4 creeks are not in the inventory of Goal 5 resources. Indeed,  
5 it contends the county satisfied Goal 5's requirements.

6           We agree that the county satisfied some requirements of the  
7 goal. It did not satisfy all.

8           We first note that LCDC's administrative rule interpreting  
9 Goal 5 sets forth procedures to be used in the formulation of  
10 comprehensive plans rather than later plan implementation or  
11 plan amendment stages. When a plan is amended, however, new  
12 uses may be authorized that conflict with protected resources.  
13 The rules does not describe a specific procedure for assessing  
14 and resolving these later arising conflicts. However, we  
15 conclude the procedures described in OAR 660-16-005 et seq  
16 apply both at the plan inception and at the plan amendment  
17 phases of plan development.

18           When resources protected by Goal 5 have been inventoried,  
19 the goal and LCDC's rules require (1) identification of  
20 conflicting uses; (2) determination of the economic, social,  
21 environmental and energy (ESEE) consequences of conflicting  
22 use; and (3) development of programs to achieve the goal. OAR  
23 660-16-005, 660-16-010. The county complied only with the  
24 first requirement.

25           The conflicting use identified by the county is the quarry  
26 and processing of crushed rock. The findings quote the

1 district fish biologist of the Oregon Department of Fish and  
2 Wildlife who testified about the risk of creating turbid water  
3 conditions in Circle Creek. This creek produces salmon,  
4 steelhead and cut-throat trout. Record at 249. He recommends  
5 settling basins and disposal sites for non-usable material as  
6 stream protection measures. The county found the risk of  
7 sedimentation of Square and Circle Creeks to be the major  
8 concern about fish habitat. The county thereby identified the  
9 conflicting use.

10 Having identified the conflicting use, the ~~next~~ step  
11 required by the rule is to consider the impacts on the resource  
12 site and on the conflicting use and to determine the ESEE  
13 consequences of allowing the conflicting use. OAR  
14 660-16-005(2). Here, the county failed. The findings do not  
15 disclose what the ESEE consequences could be from the quarry  
16 operations. Without a determination of the consequences, the  
17 county is ill equipped to justify placing limitations on the  
18 quarry operation or to determine the efficacy of any conflict  
19 reduction measures. Also, without findings showing what the  
20 county considered the ESEE consequences to be, we are not in a  
21 position to review whether the county satisfied the  
22 requirements of OAR 660-10-005(2). Sunnyside Neighborhood,  
23 supra.

24 Petitioners also allege the county failed to develop a  
25 program to achieve the goal as required by OAR 660-16-010.  
26 Petitioners argue that the conditions to the approval were not

1 adopted by the county commission. The ordinance incorporated  
2 findings and conclusions but made no specific mention of the  
3 conditions.

4 Given our previous discussion about the failure to analyze  
5 the ESEE consequences to the fish habitat, an analysis of the  
6 county's program to resolve the conflicts is premature. We  
7 note, however, that we believe the conditions were incorporated  
8 into the decision as discussed in the Fourth Assignment of  
9 Error, infra.

10 Because we find the county's decision does ~~not~~ include a  
11 full analysis of the ESEE consequences which would result from  
12 allowance of the quarry operations as required by OAR  
13 660-16-005(2), we sustain this assignment of error.

14 FOURTH ASSIGNMENT OF ERROR

15 Petitioners allege the decision fails to show compliance  
16 with two comprehensive plan provisions. First, petitioners say  
17 the decision does not comply with the following Goal 5 policy  
18 concerning aggregate sources:

19 "Preventive measures shall be taken to assure that  
20 excessive noise, dust, vibrations and other nuisances  
21 associated with mining activities are avoided."  
22 Policy 6, Goal 5, Clackamas County Comprehensive Plan.

23 Petitioners contend the county made no findings either  
24 assessing the extent of "noise, dust, vibrations and other  
25 nuisances" or discussing what mitigation measures will be  
26 necessary. Petitioners point to the testimony by residents in  
the area who oppose the application. The residents were

1 concerned about degradation of the rural character of the area  
2 by noise, dust and stream siltation. Petitioners allege this  
3 testimony about dust and noise was not adequately addressed,  
4 and the findings do not explain what facts about the dust and  
5 noise the county believes to be true or how the plan criterion  
6 is satisfied. Petitioners cite Spalding v. Josephine County,  
7 14 Or LUBA 143 (1985) as authority for their claim.

8 In Spalding, supra, the county referred to testimony of  
9 certain witnesses explaining that the applicant's intentions  
10 for a sewage disposal system were adequate to support the  
11 development. The county also found that plans for the system  
12 must be approved by the Department of Environmental Quality.  
13 We held the findings inadequate. Although the findings here  
14 lack detail, they do address the complaints of dust and noise  
15 with more specificity than was evident in Spalding, supra.

16 Summarized, the county's findings are:

- 17 (1) Five residences are within 3,000 feet of the  
18 quarry, the closest being approximately 2,000  
feet away.
- 19 (2) The zoning ordinance requires all access roads to  
20 be maintained dust-free.
- 21 (3) The closest resident has heard noise from the  
22 quarry site. (He also has heard noise from other  
quarries and traffic noise from Highway 101.)
- 23 (4) A noise study by a consulting engineer shows  
24 quarry and batch plant operations can be  
conducted within state noise regulation limits.
- 25 (5) Noise from the quarry will be no greater than  
from normal logging activities in the area.
- 26 (6) "Measures have been taken to reduce potential

1 fish habitat, noise and dust impacts to  
2 acceptable levels." Record at 257.

3 The findings are adequate to show what facts the county  
4 believed about the noise and dust from quarry operations.

5 The critical issue, however, is whether the decision meets  
6 the plan policy requiring that preventive measures be taken to  
7 avoid "excessive noise, dust, vibrations and other nuisances  
8 associated with mining." Petitioners contend the policy is not  
9 satisfied because the county did not attach any conditions to  
10 the approvals. Petitioners base this claim on certain language  
11 in the challenged ordinance, which specifically adopts the  
12 findings and conclusions in an "Exhibit A" but fails to adopt,  
13 or even mention, conditions. Petitioners are correct that the  
14 adopting ordinance mentions only findings and conclusions in  
15 the exhibit. However, for reasons set forth below, we do not  
16 agree the conditions were not adopted.

17 The minutes of the commissioners' meeting of April 2, 1985,  
18 described the commissioners' debate whether to include a  
19 condition limiting blasting. The planning staff presented two  
20 alternative sets of conditions. One set included a condition  
21 regarding blasting, and one did not. Record at 234. After  
22 receiving testimony and discussing the matter, the commission  
23 made the following motion:

24 "Motion made and passed unanimously to proceed with  
25 the first reading of the ordinance, Alternative No. 2,  
allowing the blasting." Minutes of Commissioners'  
Meeting dated April 2, 1985, Record at 235.

26 We take this language to mean the ordinance adoption

1 proceedings went forward with conditions as part of the  
2 approval. The conditions were those in the second alternative  
3 reviewed by the commission at its April 2 meeting. We also  
4 observe that the record includes 14 conditions immediately  
5 following the findings. The conditions are marked "Exhibit A,  
6 Part 3, Alternative 2." Record at 260. We hold the conditions  
7 were adopted.

8 Our inquiry is not ended because petitioners also contend  
9 these conditions are not adequate preventive measures to avoid  
10 excessive noise, dust, and vibrations. The pertinent  
11 conditions state:

12 "1. Preventive measures shall be taken to assure that  
13 excessive noise, dust, vibrations, and other  
14 nuisances associated with mining activities are  
15 avoided. The applicant shall coordinate with the  
16 noise pollution control section of the Department  
17 of Environmental Quality to mitigate possible  
18 excessive noise emissions from rock extraction  
19 and sorting operations. Steps to lessen noise  
20 pollution impacts on nearby residential/commercial  
21 properties should include time of operations.

18 \* \* \*

19 "2. The proposed use will require protection of water  
20 quality in nearby Circle Creek and its tributary  
21 creeks. The applicant shall coordinate with the  
22 Oregon Department of Fish and Wildlife for proper  
23 drainage design from the pit so water turbidity  
24 levels are not increased in Circle Creek and  
25 Square Creek. Settling basins as well as an  
26 upland site to dispose of non-usable material  
shall be required if pit drainage is directed to  
Circle Creek.

"4. Rock crushing operation shall comply with Air  
Contaminant Discharge Permit issued by the State  
Department of Environmental Quality and Section  
3.470 of Clatsop County Ordinance 80.14.

1  
2 \* \* \*

3 6. All private access and service roads shall be  
4 maintained dust-free condition during intensive  
5 operations.

6 \* \* \*

7 "12. Obtain a Clatsop County Land and Water  
8 Development and Use permit to validate that  
9 conditions 1, 2, 3, 4, 5, 6, 7, 8, and 11 have  
10 been completed prior to rock extraction and stock  
11 pile operations." Record at 260-261.

12 We agree with petitioners that Condition No. 1 does not  
13 specify what preventive measures must be taken to avoid  
14 excessive noise, dust, vibrations and the other adverse affects  
15 of mining. However, the comprehensive plan and zone change  
16 under review is not the final decision to assure implementation  
17 of preventive measures. Condition No. 12 requires that a use  
18 permit must be obtained "to validate that Conditions 1, 2, 3,  
19 4, 5, 6, 7, 8, and 11 have been completed prior to rock  
20 extraction and stockpile operations." Based on the noise study  
21 submitted by the applicant, the county found compliance with  
22 DEQ noise regulations is feasible. The measures to be taken to  
23 obtain compliance with DEQ standards and with standards in  
24 Policy 6 in the Goal 5 element of the county's plan, will be  
25 scrutinized in the use permit proceedings required by Condition  
26 No. 12. Since the permit must be measured against the  
discretionary standards in the plan policy, the permit granting  
procedure will be subject to the requirements of notice and  
hearing set forth in ORS 215.416. This two step process to

1 approve compliance with applicable standards is adequate.

2 Margulis v. City of Portland, 4 Or LUBA 89 (1981).

3 Similarly, the adequacy of siltation prevention measures  
4 required by Condition No. 2. will be reviewed in the use permit  
5 procedure.

6 Measures to prevent air contamination consist of ordinance  
7 provisions requiring dust-free maintenance of access roads and  
8 the air contaminant discharge regulations by DEQ. Both  
9 measures are incorporated into the conditions. The plan policy  
10 at issue is sufficiently open-ended to allow this method of  
11 taking preventive measures. We therefore conclude the decision  
12 does not violate Policy 6 of the Goal 5 element of the plan as  
13 petitioners contend. This subassignment of error is denied.

14 Petitioners next allege the Goal 6 element of the county's  
15 plan imposes a stricter procedural standard than the two step  
16 approval process. The policy states:

17 "Any development of land, or change in a designation  
18 of use of land, shall not occur until it is assured  
19 that such change or development complies with  
20 applicable state and federal environmental standards."

21 Petitioners say this policy requires findings showing that  
22 each use allowed in the QM zone will meet all environmental  
23 standards before the QM designation may be applied to the  
24 land. Under this view, review of compliance with environmental  
25 regulations may not be deferred to later permit proceedings.

26 We do not agree with petitioners' contention that the  
county's only available method to obtain assurance of

1 compliance with environmental regulations is to find compliance  
2 at the time of the zone change. The county's zoning ordinance  
3 requires that all uses in the QM zone comply with state and  
4 federal standards regarding air, noise, water and noise  
5 decisions. The zoning standard and the two-step process  
6 invoked by the county will insure these standards will be met  
7 prior to authorization of any proposed uses allowed in the QM  
8 zone. Margulis v. Portland, supra. These assurances are  
9 sufficient to comply with the plan policy.

10 This subassignment of error is denied.

11 FIFTH ASSIGNMENT OF ERROR

12 Petitioners claim the county's hearing procedure denied  
13 opponents an adequate opportunity to rebut evidence.

14 The application was approved by the county planning  
15 commission at its meeting on February 11, 1985. At that  
16 meeting, the applicant submitted a noise study report prepared  
17 by a registered engineer. Petitioners' attorney requested 7-10  
18 days to review the report, but the request was denied. The  
19 commission then voted to approve the plan and zone changes.  
20 The county board of commissioners took up the application and  
21 the planning commission's recommendation of approval the next  
22 day, February 12. At the February 12 meeting, the  
23 commissioners received additional testimony and set February 26  
24 as the date of the first reading of the ordinance.

25 Petitioners argue that due process requires a meaningful  
26 opportunity to rebut opposing evidence, particularly expert

1 technical evidence. According to petitioners, their  
2 substantial rights have been prejudiced by the county's refusal  
3 to allow sufficient time to review and respond to the technical  
4 report.

5 A similar claim of error was considered in Greenwood v.  
6 Polk County, 11 Or LUBA 230 (1984). There, a request was made  
7 to keep the record open for 15 days to allow petitioners an  
8 opportunity for rebuttal of evidence submitted by the  
9 applicant. The applicant's evidence was a letter with  
10 financial data and gross profit projections. Petitioners had  
11 the opportunity to present contradictory evidence at the same  
12 hearing at which the letter was submitted. We said that we do  
13 not consider further opportunity to review the evidence and  
14 submit further evidence to be a constitutionally protected  
15 right in those circumstances. Greenwood v. Polk County, supra  
16 at 238.

17 Petitioners here had the opportunity to submit rebuttal  
18 evidence at the planning commission meeting of February 11 and  
19 at the board of commissioners meeting on February 12.  
20 Petitioners did not allege they were prevented from presenting  
21 rebuttal evidence at the first reading of the ordinance  
22 scheduled for February 26.<sup>10</sup> Under these circumstances, we  
23 decline to depart from Greenwood, supra. The assignment of  
24 error is denied.

25 The decision is remanded.  
26

FOOTNOTES

1  
2  
3 1

An exception to Goal 4 was not at issue in Westerberg v. Linn County, 7 Or LUBA 7 (1982). The opinion discussed the need for Goal 2 exception to Goal 2 to allow mineral extraction and processing on agricultural land.

6  
7 2

The applicant's asphalt-making process requires three fine grades of crushed rock: one half inch to one quarter inch, one quarter inch to ten, and ten minus rock. One quarter inch to ten refers to rock between one quarter inch and one tenth inch in size. Ten minus refers to rock less than one tenth inch in size.

10  
11 3

The fine grades of crushed rock were required for a previous state highway project. The screening equipment to produce these grades was provided by the contractor for the job. A letter from the contractor explains the Johnson quarry owner lacked experience producing fine grades at the time. Now the owner has confidence to produce the three sizes of asphalt rock. Record at 117. However, the owner needs to acquire additional equipment to produce the finer grades.

16  
17 4

The only reference to the cost of crushed rock that we observed in the record is in proposed findings submitted by the applicant. Record at 65. This proposed finding was included as the challenged Finding No. 19 in the final order. Findings may not be bootstrapped in this fashion. That is, findings supported only by unadopted drafts of findings are not supported by substantial evidence.

21  
22 5

In significant part, OAR 660-04-020(2)(c) states:

"(c) The exception shall describe the characteristics of alternative areas considered by the jurisdiction for which an exception might be taken, the typical advantages and disadvantages of using the area for a use not allowed by the Goal, and the typical positive and negative consequences resulting from the use at the

1 proposed site with measures designed to reduce  
2 adverse impacts. A detailed evaluation of  
3 specific alternative sites is not required unless  
4 such sites are specifically described with facts  
5 to support the assertion that the sites have  
6 significantly fewer adverse impacts during the  
7 local exceptions proceeding. The exception shall  
8 include the reasons why the consequences of the  
9 use at the chosen site are not significantly more  
10 adverse than would typically result from the same  
11 proposal being located in areas requiring a goal  
12 exception other than the proposed site. Such  
13 reasons shall include, but are not limited to,  
14 the facts used to determine which resource land  
15 is least productive; the ability to sustain  
16 resource uses near the proposed use; and the  
17 long-term economic impact on the general area  
18 caused by irreversible removal of the land from  
19 the resource base. Other possible impacts  
20 include the effects of the proposed use on the  
21 water table, on the costs of improving roads and  
22 on the increase cost to special service  
23 districts."

---

6

14 ORS 197.732(4) states:

15 "(4) A local government approving or denying a  
16 proposed exception shall set forth findings of  
17 fact and a statement of reasons which demonstrate  
18 that the standards of subsection (1) of this  
19 section have or have not been met."

---

7

19 The county may have concluded the residences are too  
20 distant from the proposed use to be affected by it. However,  
21 without findings on the matter, we are unable to review what  
22 the county determined, or even if any determination was made,  
23 about compatibility with these residences.

---

8

23 OAR 60-04-018(3)(a) applies to exceptions taken after  
24 March 20, 1986, the effective date of the rule in OAR  
25 660-04-018(4). The county's decision was adopted April 2, 1986.

---

9

26 Petitioners contend that fish habitat is subject to Goal 5

1 protection even if the habitat was not included in the  
2 acknowledged inventory. However, in Urquhart v. Lane Council  
3 of Governments, \_\_\_ Or App \_\_\_ (1986) (Slip Op. dated July 2,  
4 1986), the Court held that in plan amendment proceedings we may  
5 not review defects in the inventory which are not directly or  
6 indirectly attributable to the amendment. The periodic review  
7 proceedings in ORS 197.640 - 197.647 are the forum to make  
8 corrections of this kind. The changes under review here do not  
9 alter the comprehensive plan inventories of fish habitat. We  
10 must reject petitioners' claim that fish habitat should be  
11 subject to Goal 5 procedures even if habitat is not included in  
12 the county's acknowledged inventory of Goal 5 resources.

13 \_\_\_\_\_  
14 10

15 No minutes of a meeting of the board of commissioners on  
16 February 26 appear in the record. The record does include  
17 minutes of a second reading of the ordinance on March 12.

1 CERTIFICATE OF MAILING

2 I hereby certify that I served the foregoing Final Opinion  
3 and Order for LUBA No. 86-025, on August 8, 1986, by mailing to  
4 said parties or their attorney a true copy thereof contained in  
5 a sealed envelope with postage prepaid addressed to said  
6 parties or their attorney as follows:

7 Steven L. Pfeiffer  
8 Sullivan, Sherton, Pfeiffer,  
9 Johnson & Kloos  
10 53 SW Yamhill  
11 Portland, OR 97204

12 Kenneth S. Eiler  
13 Bauske & Eiler  
14 930 N. Holladay  
15 PO Box 53  
16 Seaside, OR 97138

17 Dan Van Thiel  
18 Attorney at Law  
19 No. 10, Sixth Street  
20 Suite 204  
21 Astoria, OR 97103

22 Dated this 8th day of August, 1986.
