Project Description: **The project is the \$70M modernisation project consisting of reconstruction of the interchange at exit 25 on I-5. The project will include the construction of two new bridges. One, the replacment of the bridge over the interstate and the associated ramp connections to the interstate. The second bridge is the replacement of the existing bridge over Bear Creek to the west. The project will also include widening of a portion of OR 99 to the west as well reconstruction of the roadways from OR 99 over the interstate to and including realignment and new construction of several roadways on the east side of the interstate.**

Focus of Meeting: **One of the main concerns is the staging of the work. The work is in and around numerous business and residences and the work must be completed with minimun disturbance to those businesss and residences. The east west connection over I-5 provides the main connection for people travelling to and from work as well as emergency services to access the east side residences and business. This interchange is the most southerly of the regional interchanges that serve the Medford area and provides access for those residents traveling to an from the southern portion of the Rogue Valley to east Medford. I-5 provides the main north-south route for freight trafic up and down the west coast. Minimum interuption of that traffic is imperative.**
