

Activity 301 Sno-Park Maintenance

Activity 301 involves all work performed at designated Winter Recreation Parking Locations (Sno-Parks) areas, including:

- Removing snow, ice, or slush.
- Providing “Sno-Park Permit Required” Signs.

The Maintenance Services Coordinator in the Office of Maintenance coordinates, with the Winter Recreation Advisory Committee and the Oregon Transportation Commission, the designation of and negotiation of agreements for Sno-Park areas.

ODOT forces may perform the snow removal or other entities may perform that work on a contract basis.

Do not perform work or expend funds beyond the funding established in Activity 301, whether the work is done by ODOT or contract forces.

The District Manager and Transportation Maintenance Manager should include the scheduling and timing of this work in the Winter Operations Plan. Generally, work on the State Highway system will take priority over this work.

Measurement of Accomplishment, Expenditure Account, and Charge Activity

Measurement is number of worker hours involved. Expenditure account type is Sno-Park EA. Charge all work to TEAMS Activity 301. When snow removal is contracted out use object detail 310.
