Road Safety Audit Project Boundary

Road Safety Audit

A road safety audit (RSA) is a formal safety performance examination of all transportation modes of an existing or future road or intersection by an independent, multi-disciplined audit team.

It seeks to identify opportunities to improve safety:

- It considers the safety of all road users, a multi-modal approach.
- Examines the interaction of project elements.
- Considers interactions at the borders or limits of the project.
- Proactively considers mitigation measures, both short and long-term.
