PROJECT DESCRIPTION:

Design and construct a 1,400 lineal foot multi-modal trail segment of the Fanno Creek Trail between Woodward Park and Grant Avenue

PURPOSE/NEED:

Lack of connectivity is a significant problem with the eight-mile Fanno Creek regional trail due to a gap in the trail between Woodard Park and Grant Avenue. Trail users are

required to detour onto a street without sidewalks or bike lanes to traverse the current gap in the trail. The project will address the connectivity issues by constructing a 1/4-mile gap of the trail to provide an 8-mile continuous trail connecting Tigard, Beaverton, and Portland.

BENEFITS:

- Connects parks, open spaces, schools, and alternative access to major urban activity centers for residents and neighboring communities
- Provides access to Tigard Transit Center and indirect access via local street connections to the Beaverton Transit Center
- Provides an opportunity for active transportation and trail enthusiasts to enjoy the natural settings of Fanno Creek in an urban environment
- Eliminates a gap that forces pedestrians and bicyclists onto streets without sidewalks and bike lanes
- Minimizes impacts to sensitive lands within the floodplain with the construction of an elevated section of the trail

ASSUMPTIONS:

- 1,400 feet of trail with 500 to 600 feet of hard paved surface
 - » Trail will be 12-feet wide in most areas
- 60-foot elevated boardwalk over Fanno Creek
- Vegetated corridor mitigation and enhancement
- Tree elimination and replanting to avoid angle issues and placement of bridge
- Temporary construction easements may be required
- All cost over-runs are the responsibility of the applicant

RISKS:

- Potential floodplain mitigation needs to be addressed in design

LEGEND

- Existing Trail
- Proposed Trail
- Fanno Creek
