

U.S. 26: Glencoe Road Interchange Project - Update

***Crews to perform tree and brush removal in February and March
in preparation for construction work this summer***

Construction on the U.S. 26: Glencoe Road Interchange Project will begin this summer. To get ready for construction, ODOT needs to remove trees and brush in the area before the bird nesting season. ODOT's contractor will perform tree and brush removal during the months of February and March. Clearing will take place in all four quadrants of the interchange; however, the majority will take place in the southwest and northeast quadrants.

Tree felling work will take place during the day between sunrise and sunset and will not directly impact traffic (although travelers can expect some shoulder closures). Travelers should use caution when moving through the area while this work is happening adjacent to the roadways.

As part of the final work on the U.S. 26: Glencoe Road Interchange Project, ODOT will re-plant the area densely with native riparian trees and shrubs, and wetland species. ODOT will host an open house later this spring prior to major construction activities with more information on landscape plans, construction staging and traffic impacts.

For more information, please contact Elizabeth Craig with ODOT Community Affairs at (503) 731-8237 or elizabeth.craig@odot.state.or.us.
