TITLE ([more info](#))

SR-22 Sublimity Inter exchange Project

PROBLEM (Description of need) ([more info](#))

Highway construction at this inter exchange is progressing well and it is a long expected solution to the safety of drivers and traffic at this intersection; however, I deem it and oversight not being considered in the construction. SR-22 W at the Fern Ridge intersection has experienced some fatalities in the past; the problem is exacerbated today when vehicles are attempting to enter into the highway. As the construction has progressed, there have been several close-calls, some of which I have experienced, trying to enter the highway because the traffic has intensified.

PROPOSED RESEARCH, DEVELOPMENT OR TECHNOLOGY TRANSFER ACTIVITY ([more info](#))

Consider expanding the project to include an easy entrance to the highway at this intersection for easy flow and merging. This intersection is the only one not having this facility from this town into Salem. This expansion is further assisted by pre-engineering in place. Sometime ago shoulder leveling and landscaping was done; it easily lends itself to minimum investment.

BENEFITS ([more info](#))

A good safety feature.
