STATEMENTS OF INTENT

STATEMENTS OF INTENT FOR THE JANUARY 1, 2010 PRIORITIZED LIST OF HEALTH SERVICES

STATEMENT OF INTENT 1: PALLIATIVE CARE

It is the intent of the Commission that palliative care services be covered for patients with a life-threatening illness or severe advanced illness expected to progress toward dying, regardless of the goals for medical treatment and with services available according to the patient's expected length of life (see examples below).

Palliative care is comprehensive, specialized care ideally provided by an interdisciplinary team (which may include but is not limited to physicians, nurses, social workers, etc.) where care is particularly focused on alleviating suffering and promoting quality of life. Such interdisciplinary care should include assessment, care planning, and care coordination, emotional and psychosocial counseling for patients and families, assistance accessing services from other needed community resources, and should reflect the patient and family's values and goals.

Some examples of palliative care services that should be available to patients with a life-threatening/limiting illness,

- 1) without regard to a patient's expected length of life:
 - Inpatient palliative care consultation; and,
 - Outpatient palliative care consultation, office visits.
- 2) with an expected median survival of less than one year, as supported by the best available published evidence:
 - Home-based palliative care services (to be defined by DMAP), with the expectation that the patient will move to home hospice care.
- 3) with an expected median survival of six months or less, as supported by peer-reviewed literature:
 - Home hospice care, where the primary goal of care is quality of life (hospice services to be defined by DMAP).

It is the intent of the Commission that certain palliative care treatments be covered when these treatments carry the primary goal to alleviate symptoms and improve quality of life, without intending to alter the trajectory of the underlying disease.

Some examples of covered palliative care treatments include:

- 1) Radiation therapy for painful bone metastases with the intent to relieve pain and improve quality of life.
- 2) Surgical decompression for malignant bowel obstruction.
- 3) Medication therapy such as chemotherapy with low toxicity/low side effect agents with the goal to decrease pain from bulky disease or other identified complications. Cost of chemotherapy and alternative medication(s) should also be considered.
- 4) Medical equipment and supplies (such as non-motorized wheelchairs, walkers, bandages, and catheters) determined to be medically appropriate for completion of basic activities of daily living, for management of symptomatic complications or as required for symptom control.
- 5) Acupuncture with intent to relieve nausea.

Cancer treatment with intent to palliate is not a covered service when the same palliation can be achieved with pain medications or other non-chemotherapy agents.

It is NOT the intent of the Commission that coverage for palliative care encompasses those treatments that seek to prolong life despite substantial burdens of treatment and limited chance of benefit. See Statement of Intent on Treatment of Cancer with Little or No Benefit Provided Near the End of Life.

STATEMENT OF INTENT 2: DEATH WITH DIGNITY ACT

It is the intent of the Commission that services under ORS 127.800-127.897 (Oregon Death with Dignity Act) be covered for those that wish to avail themselves to those services. Such services include but are not limited to attending physician visits, consulting physician confirmation, mental health evaluation and counseling, and prescription medications.

PREVENTION TABLES

GUIDELINE NOTE D1, NON-PRENATAL GENETIC TESTING GUIDELINE

- I. Coverage of genetic testing in a non-prenatal setting shall be determined the algorithm shown in Figure C.1 unless otherwise specified below.
- II. Related to genetic testing for patients with breast/ovarian and colon/endometrial cancer suspected to be hereditary, or patients at increased risk to due to family history.
 - A. Services are provided according to the Comprehensive Cancer Network Guidelines.
 1. NCCN Clinical Practice Guidelines in Oncology. Colorectal Cancer Screening. V.1.2006 (1/3/06). www.nccn.org
 2. BRCA1/BRCA2 testing services for women without a personal history of breast and/or ovarian cancer should be provided to high risk women as defined by the US Preventive Services Task Force definition given in the Prevention Tables (see "Interventions for High Risk Populations" in the tables for ages 11 and above).
 3. BRCA1/BRCA2 testing services for women with a personal history of breast and/or ovarian cancer and for men with breast cancer should be provided according to the NCCN Clinical Practice Guidelines in Oncology. Genetic/Familial High-Risk Assessment: Breast and Ovarian. V.1.2006 (12/14/05). www.nccn.org
 - B. Genetic counseling should precede genetic testing for hereditary cancer. Very rarely, it may be appropriate for a genetic test to be performed prior to genetic counseling for a patient with cancer. If this is done, genetic counseling should be provided as soon as practical.
 1. Pre and post-test genetic counseling by the following providers should be covered.
 - i. Medical Geneticist (M.D.) - Board Certified or Active Candidate Status from the American Board of Medical Genetics
 - ii. Clinical Geneticist (Ph.D.) - Board Certified or Active Candidate Status from the American Board of Medical Genetics.
 - iii. Genetic Counselor - Board Certified or Active Candidate Status from the American Board of Genetic Counseling, or Board Certified by the American Board of Medical Genetics.
 - iv. Advance Practice Nurse in Genetics - Credential from the Genetic Nursing Credentialing Commission.
 - C. If the mutation in the family is known, only the test for that mutation is covered. For example, if a mutation for BRCA 1 or 2 has been identified in a family, a single site mutation analysis for that mutation is covered, while a full sequence BRCA 1 and 2 analyses is not.
 - D. Costs for rush genetic testing for hereditary breast/ovarian and colon/endometrial cancer is not covered.
- III. Related to genetic testing for infants and children with developmental delay:
 - A. Chromosome studies and Fragile X testing is covered without a visit or consultation with a specialist.
 - B. A visit with the appropriate specialist (often genetics, developmental pediatrics, or child neurology), including physical exam, medical history, and family history is covered. Physical exam, medical history, and family history by the appropriate specialist, prior to any genetic testing is often the most cost-effective strategy and is encouraged.
 - C. Coverage for genetic testing for other conditions should continue to be made on a case-by-case basis according to the algorithm in Figure C.1.

GUIDELINE NOTE D2, TUBERCULOSIS TESTING GUIDELINE

- I. Quanti-FERON TB Gold (QFT-G), a blood test for detecting infection with *Mycobacterium tuberculosis*, may be used in the following circumstances:
 - A. Instead of Tuberculin Skin Test (TST) for investigation of contacts to confirmed cases of active tuberculosis (TB) disease.
 - B. Instead of TST for screening for latent TB in persons with definitive history or BCG or who have immigrated from countries with high prevalence (>10%) of latent TB where BCG is commonly given.
 - C. As a supplementary test to TST in foreign-born persons with a positive TST, history of BCG vaccination against tuberculosis, and no clinical evidence of current TB disease.
 - D. As a supplementary test in persons with a positive TST who are members of otherwise low-risk populations (e.g., U.S.-born persons and others who have immigrated to the U.S. > 5 years previously or more recently from low TB prevalence countries; absence of immunosuppressive conditions such as HIV infection, renal failure, diabetes mellitus or alcoholism; homelessness; known exposure to someone with active TB), and no clinical evidence of current TB disease.
 - E. In populations that need rapid (within 24 hours) diagnosis in order to guide appropriate public health interventions such as isolation for infectious tuberculosis or contact evaluation.
 - F. In a high-risk patient (e.g. homelessness, immune suppression or deficiency, recent immigrant) who the treating clinician believes is unlikely to return on time for the TST reading.

GUIDELINE NOTE D3, ECHOCARDIOGRAMS WITH CONTRAST FOR CARDIAC CONDITIONS OTHER THAN CARDIAC ANOMALIES

Need for contrast with an echocardiogram should be assessed and, if indicated, implemented at the time of the original ECHO and not as a separate procedure.

**FIGURE C.1
NON-PRENATAL GENETIC TESTING ALGORITHM (See Guideline Note D1)**

* Greater than a 1% chance of death within five years due to the condition, in the absence of treatment

Lines 78,101,102,105,123-125,131,144,159,166-168,170,181,197,198,206-208,219,221,222,229,230, 232,243,249,252,275-278,280,286,291,309-311,313,319,337-339,354,452,611

1. CSF are not indicated for primary prophylaxis of febrile neutropenia unless the primary chemotherapeutic regimen is potentially curative, and is known to produce febrile neutropenia at least 40% of the time. Even for these regimens, dose reduction should be considered instead of using CSF, as no improvement in survival has been documented by use of CSF.
2. For secondary prophylaxis, dose reduction should be considered the primary therapeutic option after an episode of severe or febrile neutropenia except in the setting of curable tumors (e.g., germ cell), as no disease free or overall survival benefits have been documented using dose maintenance and CSF.
3. CSF are not indicated in patients who are acutely neutropenic but afebrile.
4. CSF are not indicated in the treatment of febrile neutropenia except in high-risk patients, as no overall clinical benefit has been documented. High-risk patients include those with ANC < 100, uncontrolled primary disease, pneumonia, hypotension, multi-organ dysfunction and invasive fungal infection.
5. CSF are not indicated to increase chemotherapy dose-intensity or schedule, except in cases where improved outcome from such increased intensity has been documented in a clinical trial.
6. CSF are indicated in the setting of progenitor cell transplantation, to mobilize peripheral blood progenitor cells, and after their infusion.
7. CSF are NOT indicated in patients receiving concomitant chemotherapy and radiation therapy.
8. There is no evidence of clinical benefit in the routine, continuous use of CSF in myelodysplastic syndromes. CSF may be indicated for some patients with severe neutropenia and recurrent infections, but should be used only if significant response is documented.

GUIDELINE NOTE 12, TREATMENT OF CANCER WITH LITTLE OR NO BENEFIT PROVIDED NEAR THE END OF LIFE

Lines 101,102,123-125,144,159,166,167,170,181,197,198,207,208,219,221,222,229,230,232,243,249, 252,275-278,280,286,291,309-311,319,337-339,354,452,574,611

- Eastern Co-operative Oncology Group (ECOG) performance score of 3 or higher

GUIDELINE NOTES FOR THE JANUARY 1, 2010 PRIORITIZED LIST OF HEALTH SERVICES

GUIDELINE NOTE 12, TREATMENT OF CANCER WITH LITTLE OR NO BENEFIT PROVIDED NEAR THE END OF LIFE (CONT'D)

The Health Services Commission is reluctant to place a strict \$/QALY (quality adjusted life-year) or \$/LYS (life-year saved) requirement on end-of-life treatments, as such measurements are only approximations and cannot take into account all of the merits of an individual case. However, cost must be taken into consideration when considering treatment options near the end of life. For example, in no instance can it be justified to spend \$100,000 in public resources to increase an individual's expected survival by three months when hundreds of thousands of Oregonians are without any form of health insurance.

Treatment with the goal to palliate is addressed in Statement of Intent 1, Palliative Care.

GUIDELINE NOTE 13, MINIMALLY INVASIVE CORONARY ARTERY BYPASS SURGERY

- Colon cancer

PET scan is covered only for the initial staging of cervical cancer and only when initial MRI or CT is negative for extra-pelvic metastasis.

PET scan of head and neck cancer is only covered for 1) initial staging when initial MRI or CT is equivocal, 2) evaluation of cervical lymph node metastases when CT or MRI do not demonstrate an obvious primary tumor, and 3) evaluation of suspected recurrence of head and neck cancer when CT or MRI does not demonstrate a clear cut recurrence.

For diagnosis, PET is covered only when it will avoid an invasive diagnostic procedure, or will assist in determining the optimal anatomic location to perform an invasive diagnostic procedure.

For staging, PET is covered in the following situations:

- Clinical management of the patient will differ depending on the stage of the cancer identified and either: 1) the stage of the cancer remains in doubt after standard diagnostic work up OR 2) PET replaces one or more conventional imaging studies when they are insufficient for clinical management of the patient.

Restaging is covered only for cancers for which staging is covered, and for testicular cancer. Restaging is not covered for cervical cancer. For restaging, PET is covered after completion of treatment for the purpose of detecting residual disease, for detecting suspected recurrence or to determine the extent of a known recurrence. PET is not covered to monitor tumor response during the planned course of therapy. PET scans are NOT indicated for routine follow up of cancer treatment or routine surveillance in asymptomatic patients.

PET scans are also indicated for preoperative evaluation of the brain in patients who have intractable seizures and are candidates for focal surgery. PET scans are NOT indicated for cardiac evaluation.

For children age 3 and under, it is especially important that psychosocial interventions, including parent skills training and/or parent-child therapy, and environmental modifications, be tried prior to medication. For children over the age of 3, psychosocial interventions are important, whether the child is on medications or not.

GUIDELINE NOTE 61, HOSPITALIZATION FOR ACUTE VIRAL INFECTIONS

Lines 540,547,561,633

Most acute viral infections are self-limited (e.g. colds, infectious mononucleosis, gastroenteritis). However, some viral infections such as viral pneumonia, aseptic meningitis, or severe gastroenteritis may require hospitalization to treat the complications of the primary disease.

Accepted coding practices insist that the underlying condition in these cases be the principle diagnosis. For example, complicated viral pneumonia requiring respiratory support with a ventilator would have a principle diagnosis of viral pneumonia and a secondary diagnosis of respiratory failure. Since the ICD-9-CM code for viral pneumonia has historically appeared only on a non-funded line, treatment has not been reimbursable regardless of the severity of the disease. In contrast, the code for viral gastroenteritis appears on line 156 and any necessary outpatient or inpatient services would be covered.

Reimbursement for the treatment of certain conditions appearing low on the Prioritized List should be provided in severe cases of the diseases identified on the following four lines.

Condition: OTHER NONINFECTIOUS GASTROENTERITIS AND COLITIS

Treatment: MEDICAL THERAPY

Line: 540

Treatment of non-infectious gastroenteritis of significant severity that is associated with dehydration should be a covered service if the case fulfills the requirement of hospital admission guidelines using an index of severity of illness.

Condition: VIRAL, SELF-LIMITING ENCEPHALITIS, MYELITIS AND ENCEPHALOMYELITIS

Treatment: MEDICAL THERAPY

Line: 547

Treatment of viral encephalitis, myelitis and encephalomyelitis of significant severity that is associated with either obtundation or dehydration should be a covered service if the case fulfills the requirement of hospital admission guidelines using an index of severity of illness.

There is limited evidence of the effectiveness of treatment (e.g., Applied Behavioral Analysis) for Autism Spectrum Disorders (ASD). However, effective treatments may be available for co-morbid conditions such as mood disorders. When treating co-morbid conditions, that condition, not an ASD diagnosis, should be the primary diagnosis for billing purposes. The treatment of co-morbid mental health conditions should be consistent with the treatment methods, frequency, and duration normally applied to those diagnoses. Treatment of neurologic dysfunctions that may be seen in individuals with an ASD diagnosis are prioritized according to the four dysfunction lines found on the Prioritized List (Lines 77, 317, 372, 404). Treatment for associated behaviors, such as agitation, that do not meet the criteria for co-morbid mental health diagnoses should be limited in frequency to a maximum of 8 hours of behavioral health service per month, subject to utilization management review by the mental health organization (MHO) or other relevant payer.
