An earthquake of magnitude 7.3 struck off Japan's east coast on Saturday at 3:10 a.m. local time, near the Fukushima nuclear site, the U.S. Geological Survey said. The Japan Meteorological Agency issued a yellow-colored tsunami warning Saturday morning, meaning a small tsunami could reach the coast at Fukushima, site of Japan's 2011 nuclear power plant disaster.

There is no tsunami danger for the U.S. west coast, British Columbia, or Alaska according to the National Tsunami Warning Center, which bases their evaluation on earthquake information and historic tsunami records.
