Project Name: **Runway 9/27 - Environ/Lighting/Signing** CIP Program Year: **2016**

Project Type: **Environ. / Planning (Design)** Project Number:

Description: Runway 9/27 rehabilitation was last overlaid in 1997 and had a Critical PCI of 69 in 2012, projected to be 61 in 2017. The project would include the realignment of the non-standard connector taxiway alignments with Twy A (in current AMP) and an evaluate the mid-runway connection to Twy C which are not in compliance with the new FAA standards. Additionally, the project would include rewiring and replacement of the Airfield Lighting which is over 20 years old.

Where is the Project?

Figure CR-1A. Airport Layout, Dimensions and Pavement Cross-Sections.
Corvallis Municipal Airport

PCI Site Plan

Figure CR-3. Pavement Condition in July 2012.
Corvallis Municipal Airport

Drawing Date: August 2012

What's the PCI??

PCI Data Report

RESULTS

Using the data collected during the visual inspection, the Micro PAVER software was used to calculate an area-weighted average Pavement Condition Index (PCI) for each pavement section inspected using the sample units evaluated. Using each section's PCI, a Pavement Condition Rating (PCR) was assigned. The PCIs measured during this inspection are shown in Table 1. The table also contains PCIs from past inspections as well as projected PCIs for 2017 and 2022. The projections were based on pavement deterioration models developed by Micro PAVER using the inspection data from other pavements in the same airport category as your airport, located in the same climatic region, and with the same surface type and use.

The ASTM Standard which governs the methodology for conducting the visual inspections was modified in 2010 and could result in changes to the Pavement Condition Index for the current inspection relative to that from the previous inspections. So a slight increase in the PCI value over the PCI values from previous inspections is possible, even if no work has been completed on the pavement.

The Branch Condition Report in Appendix 1 summarizes current pavement condition by branch while the Section Condition Report in Appendix 2 lists pavement condition by section. The current PCR is shown graphically in Figure CR-3.

Table 1. Past, Present and Future Pavement Condition Indices.

Branch	Section	Inspections			Forecast
