

Introduction

It can often be useful to be able to visualize data in graphic, rather than tabular form.

For example, the P&P Constituent group is highly diverse. It is a heterogeneous, rather than homogeneous aggregate of organizations that approach the Parole and Probation function quite differently (some departments require their P&P officers to carry firearms, others prohibit it, etc.).

Because of this, it is reasonable to expect that the distribution of responses within a survey such as this, will also be more “diverse.”

The extent of this “diversity” is a factor in setting cut-off rules for determining what will, and will not be considered critical and essential tasks.

It is interesting to be able to see, at a glance, the range of responses to the survey questions, especially when examining CIP.

Frequency is represented in bar graphs and CIP in line graphs.

The complete survey list is represented in the following pages for both FREQUENCY distribution and CIP.
