Service Delivery Data Report

District 3, Yamhill Child Welfare

Presented by:

Jennifer Ricks, CQI Program Manager Karly DeWitt, CQI Analyst

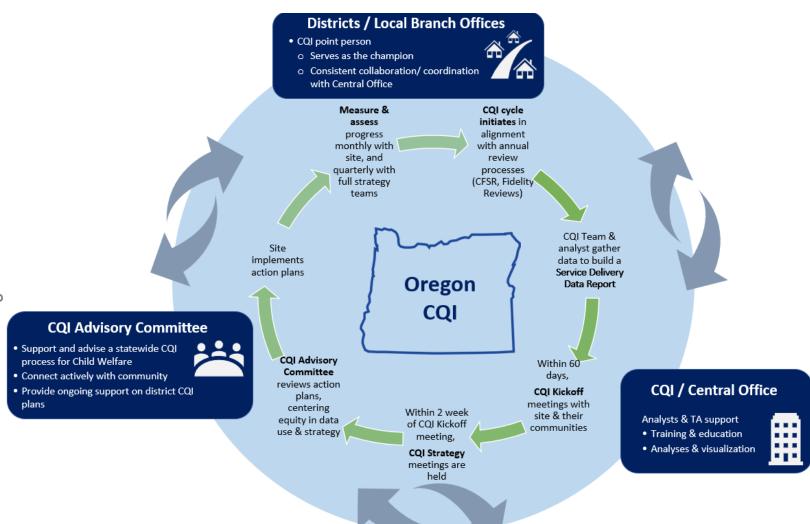

Child Welfare Service Delivery Data Report

The purpose of the Service Delivery Data Report is to understand how Oregon Department of Human Services (ODHS) Child Welfare Division and the child caring community are serving our children and families. This report is tailored for Yamhill County so that you can understand how your county is serving children and families. This report includes information about services to keep children together with their families. It also includes important information about how well children are served when they are separated from their families and how quickly they are reunified.

The Child Welfare Continuous Quality Improvement (CQI) program curates this report as part of the effort to improve the experience of children and families when they have to engage with the Child Welfare system. The CQI program uses research and data to track trends and areas for growth. ODHS Child Welfare cannot identify and solve problems in our service delivery alone and must include insight and involvement from Tribes in Oregon, community partners, and people with lived experience.

Our CQI work centers equity, not only in our service delivery but also in our use of data. The CQI process and system are rooted in the <u>Child Welfare Vision for Transformation</u>. We are committed to the following Data Equity Vision Statement in our improvement approach.

In collaboration with our community, ODHS Child Welfare is committed to cultural respect, community representation, accountability, integrity, privacy, responsibility and transparency in the collection and utilization of data in child welfare. ODHS Child Welfare will advance and embed equity through the use of racial equity and social justice tools. ODHS Child Welfare is accountable to children and families and the communities that serve them to ensure consistent, accurate, inclusive, and transparent data reporting and analysis. We invite our communities to join in this commitment.

> > Placed in Substitute Care: 51

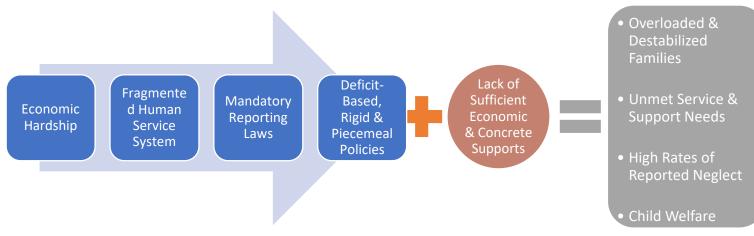

Source, descending: April 1,2022-April 1, 2023 ROM RD.01, ROM CPS.02, ROM CPS.01, ROM CM.18

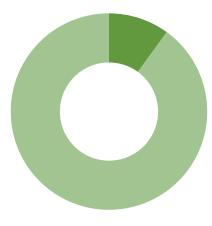

The community child population of Yamhill County, broken down by racial and ethnic demographics is displayed in the graph to the left above. In Yamhill County 69% of population is white. The graph above to the right displays the percent of children who entered substitute care during the period under review broken down racial and ethnic demographics.

Disproportionality can include both overrepresentation and underrepresentation of children in substitute care. There can be multiple factors that contribute to underrepresentation. Additionally in Yamhill County 33% of children who entered substitute care during the period under review were classified as "Unknown/Decline to Answer" in the Child Welfare computer database. This means critical information is missing from the picture that impacts Child Welfare's ability to correct practice that impacts disproportionality.

Understanding the overrepresentation, or underrepresentation, of children of color, or disproportionality, is important because it is based on several other factors that make children and families more likely to be reported to Child Welfare Services. "Things like economic hardship, fragmented human service systems, mandatory reporting laws, and historically racist policies combined with the lack of sufficient economic and concrete supports leads to overloaded families, unmet service and support needs, high rates of perceived neglect – all placing families at risk for Child Welfare involvement." -Chapin Hall, 2021

Poverty Rate:

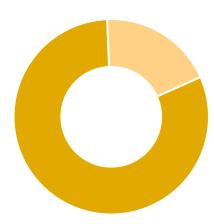

12%

Poverty in the US is measured in terms of the federal poverty line. The poverty line is a threshold level. In other words, a level of income which you are either above (out of poverty) or below (in poverty). The poverty line varies for how many people are in a household. For example, the federal standard for a family of four is \$27,750/year.

of Hours Worked/Week to Afford a 2Bdrm Apt at Minimum Wage **92.7 Hrs**

This means that a person in Yamhill County would need to work more than 2 full-time jobs at minimum wage to afford a 2-bedroom apartment or have two adults working full-time at minimum wage. This does not factor in the cost of childcare, utilities, food, and other necessities.

% of families accessing SNAP benefits **17%** The Supplemental Nutrition Assistance Program (SNAP), is designed to support families, by supplementing their food budget so they can purchase healthy food and move towards self-sufficiency. It is a concrete support that research has shown can help stabilize families and reduces concerns of neglect. In Yamhill County, 17% of the residents are receiving SNAP benefits. As an entire state, Oregon's rate of people accessing SNAP benefits is 17%

Service Delivery Data Report Reader & Metric Context

Data and metrics outlined in this report are gathered from multiple sources that look at quality of case practice (Child and Family Service Review (CFSR), Child Protective Services Fidelity Reviews, Permanency Fidelity Reviews, and Certification Reviews) as well as quantitative data counts based on information entered into ODHS' Management Information System (reported by ORKIDS, ROM (Results Oriented Management), ORRAI (Office of Reporting, Research, Analytics and Implementation), and Oregon Circuit Courts Juvenile Dependency Statistics. All reports represent a time period of April 2022-April 2023, unless otherwise noted. Qualitative metric data visuals each include a specific *n* to indicated the number of cases reviews included in the evaluation of case practice. CFSR measure's sample sizes may include additional ICWA cases.

The metrics are broken into three categories, listed and defined below. Metric categories can be identified in the color of the header for the measurement, as well as by category name.

Federal (Lag) Measures

Lag measures are data points that have already happened. They are long-term and show the change that occurs over a long period of time. There are seven measures that are tracked and reported by Oregon Child Welfare to the federal government; they are available to view via a public dashboard, https://www.oregon.gov/dhs/Data/Pages/CW-FPMs.aspx. All states and Child Welfare jurisdictions work to meet the federal standards. Lag measures are impacted by lead measures. In this report, lag graphs contain colored boxes that indicate if the goal is to stay below a standard (green) or above the standard

Practice (Lead) Measures

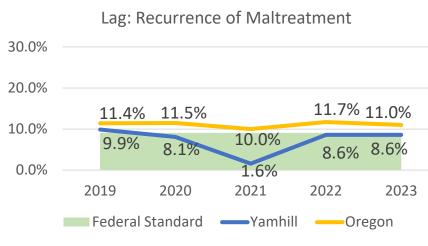

Lead measures are metrics that impact lag measures over time and can be tracked in the short term. Based on research, we know that lead measure directly impacts lag measures; in order to make changes to the lag measures, lead measures, or practice measures, can be used as a lever – by focusing on supporting and enhancing practice, the adjustment to the lead measure moves the lag measure over time. Lead measures can be tracked with a shorter lens and plan to impact them can be adjusted as needed.

This report outlines many lead measures and identifies the lag measure(s) they impact. There is a row with the seven lag measures listed for each lag below the heading of the metric, highlighting which of the lags are impacted. As a lead measure may impact more than one lag measure, some lead measures have more than one lag measure highlighted to note the various impacts.

Service Delivery Points

Service delivery points are included in this report to provide supplemental information and metrics related to how families and children are experiencing Child Welfare. These metrics do not impact the lag measures, but instead, help tell the story of service delivery during the period under review.

Recurrence of Maltreatment measures the rate at which children who were victims of a founded investigations were then named as victims of a subsequent founded abuse report within a 12-month timeframe.

The expectation is to not exceed the Federal Standard of 9.1%, represented by the green box in the graph to the left.

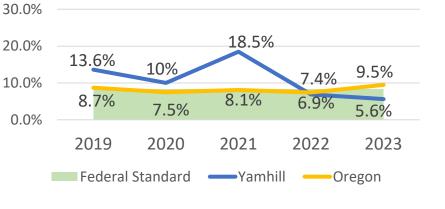

Source: ROM SA.02

Lag Measure: Reentry into Foster Care (Substitute Care)

Re-entry to Substitute Care measures the percentage at which children who have already been placed in substitute care and were returned home within a 12mo timeframe are placed in substitute care again within a subsequent 12mo timeframe of that initial return.

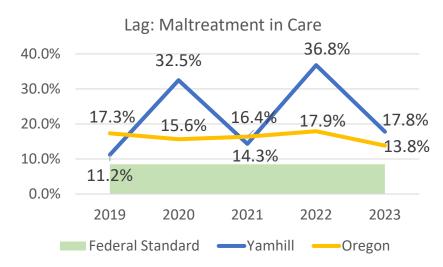

The expectation is to not exceed the Federal Standard of 8.3%, represented by the green box in the graph to the right.

Lag: ReEntry to Substitute Care

Source: ROM PA.04

Lag Measure: Maltreatment in Substitute Care

Maltreatment in Substitute Care measures the rate at which there are founded investigations of abuse once a child is in a substitute care placement. This includes safety concerns that occur in ODHS Resource Homes, other Child Caring Agencies or Residential Treatment facilities, as well as reports of historical familial abuse that are disclosed once a child is in substitute care.

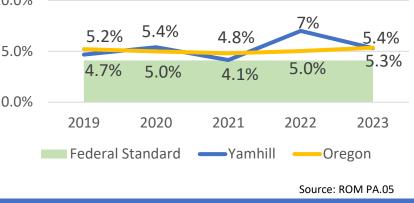

The expectation is to not exceed the Federal Standard of 8.5%, represented by the green box to the left

Lag Measure: Placement Stability

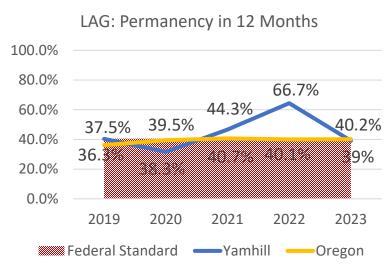

Placement Stability measures the rate children who are in substitute care in a 12mo timeframe experience placement changes or moves.

The expectation is to not exceed the Federal Standard of 4.1%, represented by the green box in the graph to the right.

Lag: Placement Stability

Lag Measure: Permanency in 12 Months

This measurement captures the percentage of children who leave substitute care to a lasting family setting in a 12-month period. This is most often reunification; a safe return home within 12 months of their entry to substitute care.

The expectation is to remain above the Federal Standard of 40.5%, represented by the red box in the graph to the left.

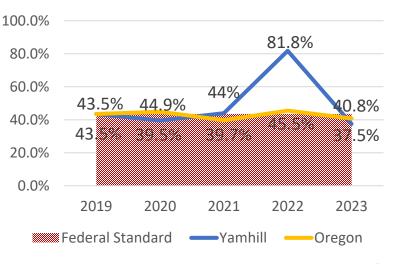

Source: ROM PA.01

Lag Measure: Permanency in 12-23 Months

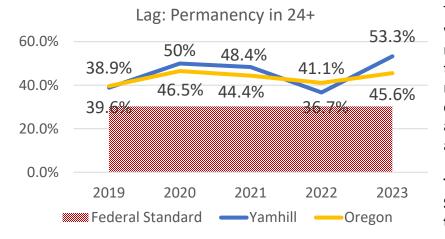

This measurement captures the percent of children who leave substitute care to permanency in a 12-23 month timeframe. Achieving permanency in this timeframe is often centered on decision points about case plans. This is usually the time when the need to change the case plan is identified, understanding the limits of parents' behavioral changes and whether they can meet their children's needs. It is within this timeframe that the plan may be changed, and the concurrent plan could be finalized.

The expectation is to remain above the Federal Standard of 43.6%, represented by the red box in the graph to the right.

Lag Measure: Permanency in 24+ Months

Source: ROM PA.03

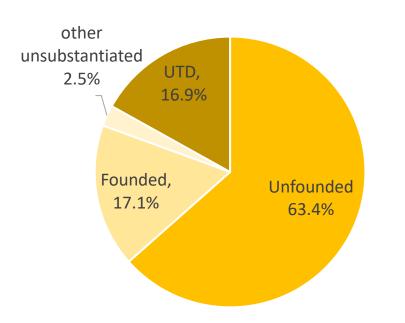

This measurement captures the percent of children who leave substitute care to permanency in a 24month timeframe or longer. This is most often a timeframe of a case in which the plan is no longer reunification, but instead has shifted to the concurrent plan, often known as guardianship, adoption, or another permanent planned living arrangement.

The expectation is to remain above the Federal Standard of 30.3%, represented by the red box in the graph to the left.

Lag Measure Performance Table

Federal Measurement	Yamhill Branch	OR	Federal Standard		
Recurrence of Maltreatment	8.6%	11.0%	9.1%	Under the federal standard by	0.50%
Re-Entry into Substitute Care	5.6%	9.5%	8.3%	Under the federal standard by	2.70%
Maltreatment in Care	17.8%	13.8%	8.5%	Over the federal standard by	9.30%
Placement Stability	5.3%	5.4%	4.1%	Over the federal standard by	1.20%
Permanency in 12 Months	39.1%	40.2%	40.5%	Under the federal standard by	1.40%
Permanency in 12-23 Months	37.5%	44.3%	43.6%	Under the federal standard by	6%
Permanency in 24+ Months	53.3%	41.0%	30.3%	Over the federal standard by	23%

Big Picture: Assessment Dispositions

Source: ROM: CPS.01

Service Point: Removals and Discharges

54 Children **Exited** Substitute Care From April 2022-April 2023, Yamhill County was assigned 864 Child Protective Services Assessments. Each assessment is closed with a "disposition," or finding regarding if abuse occurred or not. Of the allegations that were assigned for CPS investigation during the period under review, 548 assessments or 63.4% of them are unfounded, meaning no abuse occurred; 148 assessments or 17.1% of assessments result in a founded disposition, meaning that there was evidence of abuse; 146 or 16.9 % of assessments were coded as Unable to Determine, meaning there are some indications of abuse having occurred but not enough to reach a founded disposition. The final 22 assessments or 2.5% were closed with no assessment.

Yamhill Branch responded to 860 assessments between April 2022-April 2023 and worked with families to understand concerns for child safety. Caseworkers worked to support families with services and safety plans, placing children in substitute care only when there was no other option to ensure safety. From April 2022 to April 2023, Yamhill Branch placed 51 children in substitute care. During the same time period, 54 children exited substitute care.

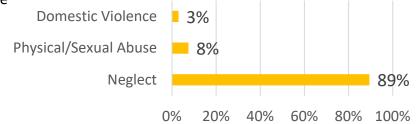

Source: ROM CM.18

Service Point: Number of Removals

Caseworkers respond to concerns for abuse as outlined by the Oregon Revised Statute, which defines what is considered abuse. The graph to the right shows the types of abuse occurring in families in which children had to be removed and placed in substitute care.

While the majority of this report focuses on service delivery, this data helps illustrate the concerns in the community.

Reasons Children Were Placed in Substiute Care, by Abuse Type

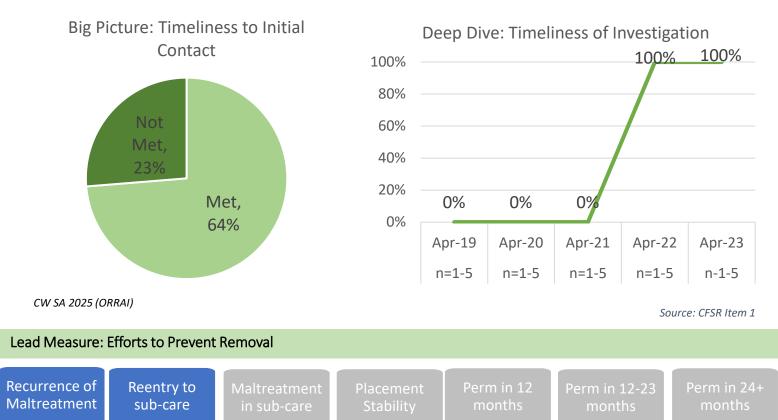

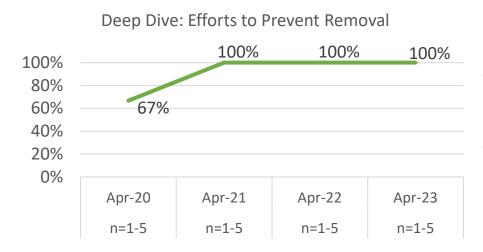

Lead Measure:	Lead Measure: Timeliness of Investigations						
Recurrence of		Maltreatment	Placement	Perm in 12	Perm in 12-23	Perm in 24+	
Maltreatment		in sub-care	Stability	months	months	months	

CPS workers are responding within assigned timelines to concerns of child safety, connecting with families quickly to set up supports and understand the factors that led to the call of concern. Timelines for contact are 24 hours (present danger), 72 hours (impending danger) and 10 days (no danger occurring)

The Big Picture data shows that caseworkers met the timelines for contact in 64% of the cases.

The Deep Dive data, below, shows performance over the last 5 years for the Yamhill branch, regarding timely initial contact with families in the cases reviewed for which the measure applied. Reminder, CFSR measure's sample sizes may include additional ICWA cases.

Caseworkers are working diligently to keep children at home with support instead of removing them whenever possible, including after they return home and may face re-entry. They are focused on getting parents or children into services designed to support the family as quickly as possible.

The Deep Dive data to the left shows performance trends regarding efforts to provide services to prevent removal in the cases reviewed for which the measure was applied over the last 5 years.

Lead Measure: Sufficient Information Gathered for Assessment

When working with families to understand more about the safety concerns, CPS workers are gathering information about routines, supervision, and parenting expectations; they are asking about attachment, bonding, and empathy. Workers are asking about each child's specific needs, developmental tracks, personalities, and relationships, as well as the extent (what happened, when did it happen, where did it happen, and who was involved) and circumstances (why did it happen, what contributed to it happening?) of abuse.

Recurrence of

safety decision in six areas of the assessment over the last 5 reviews.

The case review data to the right shows information regarding how often Yamhill County has gathered sufficient information to make a

Lead Measure Risk and Safety Assessment

Reentry to

sub-care

Maltreatment

in sub-care

When children can return home with a safety plan in place, and when CPS caseworkers are assessing concerns in-home, a clear and reliable safety plan is needed. These safety plans include frequent monitoring by the community and ODHS, and not relying on children or parents to maintain safety. The plan is updated whenever the family situation changes. To close cases, caseworkers are evaluating the risk and safety in the home environment, ensuring the behaviors in the home are predictable and stable.

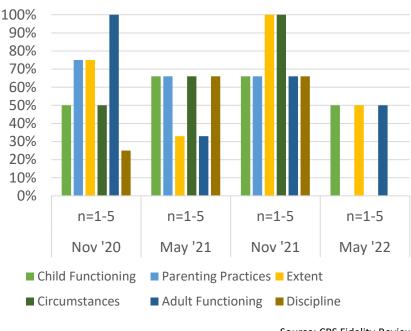

The Deep Dive data to the left shows performance trends regarding the quality and sufficiency of assessment and safety planning in the cases reviewed for which the measure applied over the last 5 years.

Lead Measure: Impending Danger Safety Threat Identification

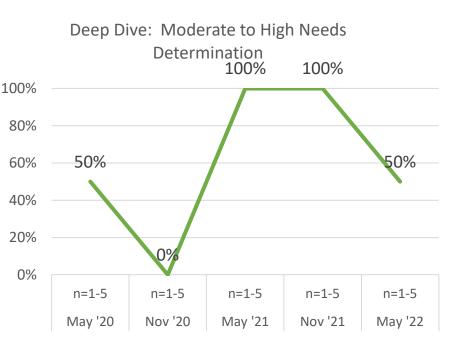

Source: CPS Fidelity Reviews

Lead Measure Moderate to High Needs (M2HN) Determination

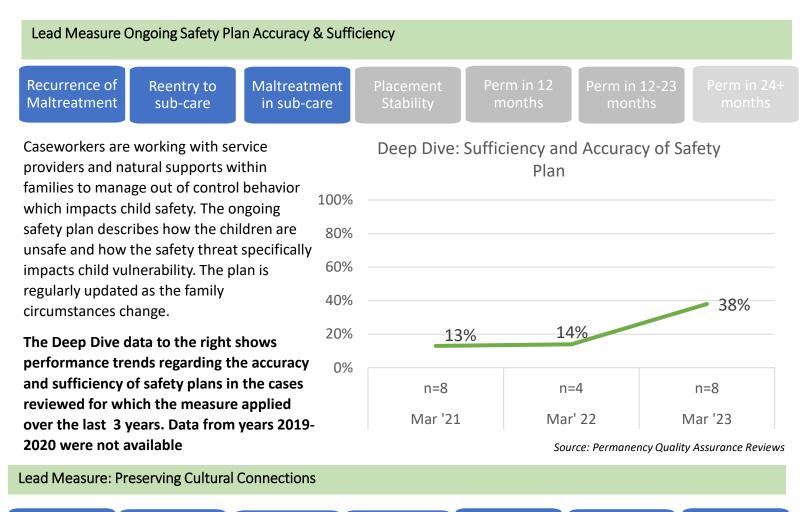

Caseworkers ask questions to understand if the family is at risk for coming back to the agency's attention. They review stressors, child vulnerability, and parenting practices to understand the risk of recurrence. When families have increased risk factors, caseworkers connect them to resources in the community. Those resources do not require ODHS contracts and can support the family longer than ODHS Child Welfare can.

The Deep Dive data to the right shows performance trends regarding the accuracy of identification of Moderate to High Needs families for the cases reviewed for which the measure was applied over the last 5 reviews.

Caseworkers work to ensure that a child's placement is stable and is consistent with achieving the child's permanency goal(s). Ideally, a child would only experience one placement setting. If a child requires a placement change, that change should be based on the needs of the child and/or to promote permanency achievement.

The pie chart below shows the number of placements experienced by children who were placed in substitute care during the period under review. The case review data, below and to the right, shows performance trends regarding the agency's ability to ensure stability of substitute care placements in the cases reviewed for which the measure applied over the last 5 years.

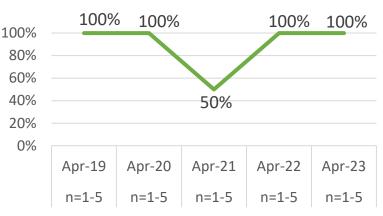

Lead Measure: Needs Assessment & Services Provided to Resource Families

	Reentry to Maltreatment sub-care in sub-care	Placement Stability	Perm in 12 months	Perm in 12-23 months	Perm in 24+ months
--	--	------------------------	----------------------	-------------------------	-----------------------

During their home visits and at other contacts, caseworkers are asking Resource Parents what they need to support the children in their home and working to provide those supports. This can be things like trainings, respite care, or professionals designed to support them in meeting children's increased needs. Caseworkers are also asking about and looking for resources in the community to support the children's needs so that the Resource Parents are not the only ones responding to a child's trauma responses or increased needs.

The case review data shows performance trends regarding efforts to assess and provide services to support Resource Families in the cases reviewed for which the measure applied over the last 5 years.

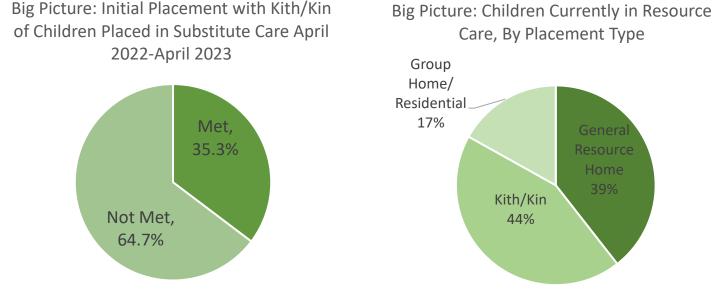

Deep Dive: Needs Assessment & Services Provided to Resource Families

Kith and Kin placements offer familiarity, cultural connection, and a sense of belonging during a traumatic time for a child. When children are placed with kith/kin, their cultural needs will most likely be met as well.

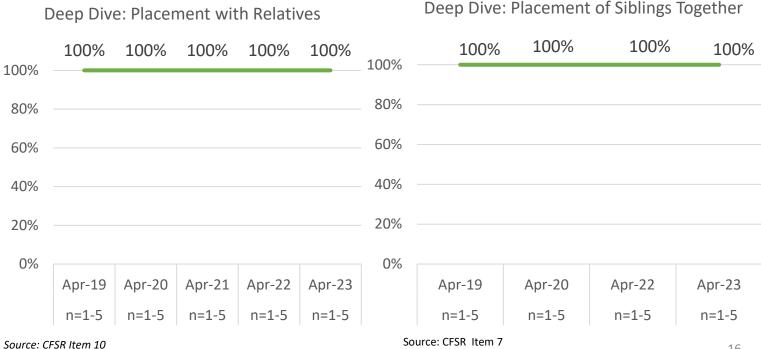

A big picture look shows that 40% of children are placed in kith/kin resource homes upon initial removal, and that 60% of children currently in substitute care are placed in kith/kin resource homes.

Source: ROM CM.08

Source: ORKIDS BI FC-1005-D

The case review data, below and to the left, shows performance trends regarding efforts to place children in kith/kin homes in the cases reviewed for which the measure applied over the last 5 years. The case review data, below and to the right, shows trends regarding efforts to place siblings together in the cases reviewed for which this measure applied over the last 5 years.

Big Picture: Timeliness to Initial Family Time When children are placed in substitute care, caseworkers and Family Time Coordinators work to ensure that children and parents can see each other as soon as possible, with a goal of having that first contact happen within 2 days after placement in substitute care.

The data entered in OR-KIDS shows from April 2022-April 2023 the agency ensured Family Time between parents and children in 2 days or less for 14% of children. 6% of children had Family Time with a parent withing 3 days of placement in substitute care; 12% of children had Family Time with a parent within 4 days of placement in substitute care; 55% of children had Family Time with a parent in more than 5 days of placement in substitute care; 12% of children had Family Time with a parent in more than 5 days of placement in substitute care; 12% of children had no Family Time with a parent documented in the OR-Kids database.

Source: ORRAI BI FC-1027-D

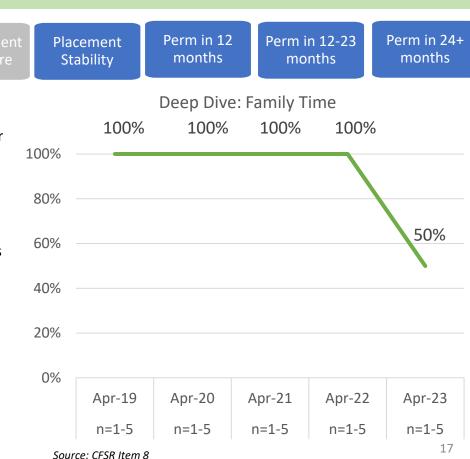

Lead Measure: Family Time

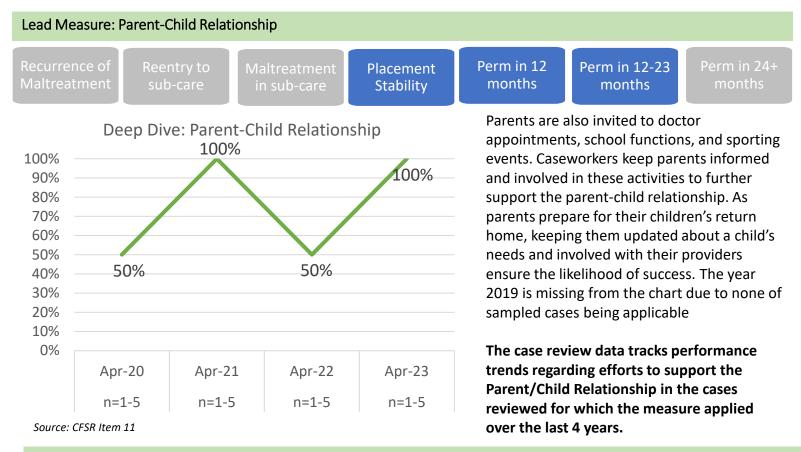

Recurrence of Maltreatment

re Malti

While children are in substitute care, families are still able to spend time together and connect in meaningful ways. Family Time often occurs in an ODHS office but is also happening in the community. This time is about connection and typical family functioning – meals, homework, problemsolving. Caseworkers are providing supports to increase the quality of the time parents spend with their children

The case review data tracks performance trends regarding efforts to ensure and support frequent and quality Family Time in the cases reviewed for which the measure applied over the last 5 years.

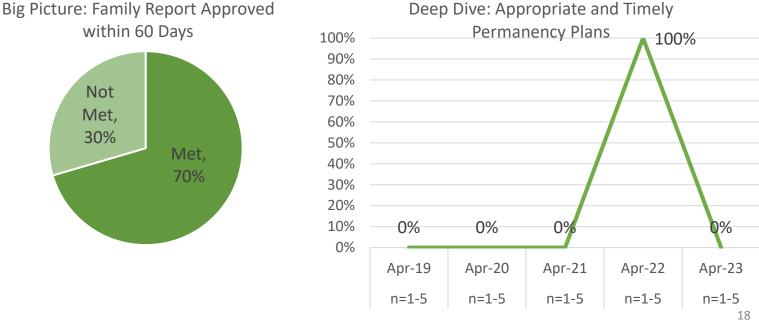

Lead Measure: Appropriate and Timely Permanency Plans

Recurrence of	Maltreatment	Placement	Perm in 12	Perm in 12-23	Perm in 24+
Maltreatment	in sub-care	Stability	months	months	months

Caseworkers, in collaboration with parents, are outlining the case plan, putting it in writing so that parents and providers understand the goals and path to achieve them. These plans are written within 60 days of a child's entry into substitute care.

A big picture look shows that the agency ensured case plans were entered and approved within 60 days of placement 70% of the time during the Period Under Review (April 2022-April 2023). The case review data tracks performance trends regarding efforts to ensure the plan was entered timely and that the plan was appropriate given the status of the case in the cases reviewed for which the measure applied over the last 5 years.

Federal guidelines, Adoption and Safe Families Act (ASFA) dictate timeframes in which different permanency types should be achieved. ASFA timelines are a critical component of this CFSR measure. Caseworkers are considering multiple processes and protocols that each take considerable lengths of time and planning (e.g. out-of-state placements) while working to meet specific child welfare timelines.

During the 2022-2023 PUR Yamhill County received a 50% strength rating for the cases that applied.

Lead Measure: Family Engagement in Case Planning

Recurrence of Maltreatment

Reentry to sub-care

Caseworkers are working collaboratively with families to create their case plans to understand the family dynamics, causes of safety concerns, and how to address them. Parents are telling caseworkers what they need to keep their children safe; they are able to identify providers they want to work with, increasing engagement in services. By working collaboratively, caseworkers can involve natural supports to maintain changes after ODHS is no longer involved and honor the family as the expert on how to keep their children safe.

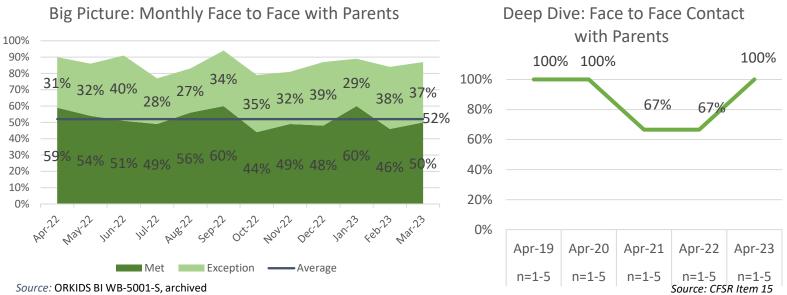

The case review data tracks performance trends regarding efforts to engage parents and children in case planning in the cases reviewed for which the measure applied over the last 5 years.

Recurrence of	Maltreatment	Placement	Perm in 12	Perm in 12-23	Perm in 24+
Maltreatment	in sub-care	Stability	months	months	months

Caseworkers are meeting with parents at least monthly, often having other points of contact in-between. Caseworkers are planning intentional connection points with parents, meeting them in spaces they feel safe and are ready to engage. Caseworkers are building trust and relationship with parents to have deeper conversations so that underlying factors are addressed in the plan and parental capacities are better understood.

A look at the big picture shows that yearly average for face to face with parents is happening 52% of the time, with an additional 34% of parent contact not met due to approved exception (average through the PUR). Case reviews look at both the frequency and the quality of the contact between caseworker and parent; the data below and to the right shows the quality of contact with parents on a monthly basis for the past 5 years.

This capacity assessment helps caseworkers find the 80% 67% 67% right services to support parents and 60% enhance capacities needed to ensure 50% child safety. 40% 20% The case review data shows performance trends regarding efforts 0% to assess parents' needs and provide Apr-19 Apr-20 Apr-21 Apr-22 Apr-23 services in the cases reviewed for which the measure applied over the n=1-5 n=1-5 n=1-5 n=1-5 n=1-5

Caseworkers see children on their caseloads at least monthly, meeting in their home at least every other month. During these contacts, caseworkers are reviewing the child's sleeping area and environment, and speaking with the child alone to provide time for the child to share anything they may not want to share with caregivers present.

A look at the big picture shows that monthly face to face with child is happening 94% of the time (average through the PUR). Case reviews look at both the frequency and the quality of the contact between caseworker and child; the data below and to the right shows the trend of Yamhill Branch's practice of frequent and quality monthly Face to Face Contact with Children for the past 5 years.

Caseworkers are partnering with children's providers to understand the needs of the child around social relationships, activities and recreation, and day to day material needs. Caseworkers ensure that children over 14yo are referred for the Independent Living Program and supports to ensure they are successful as young adults. Caseworkers are informally evaluating children during their home visits and referring children for formal assessments, designed to both understand the needs of the child and to help outline a plan for caregivers to follow

The case review data shows performance trends regarding efforts to assess children's needs and provide services in the cases reviewed for which the measure applied over the last 5 years.

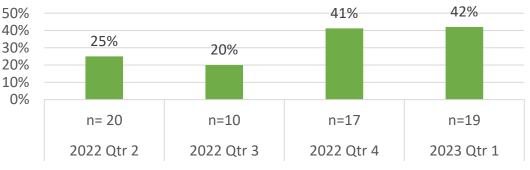

Median length of stay is the mid-point in the total length of stay for all children who exited substitute care during April 2022-April 2023. Median is the middle number in a data set, so half of the children discharged from substitute care in more months than noted above, and half in less.

The median length of stay for children who were reunified was 8.5 months. The median length of stay for children who were in a finalized guardianship was 47.6 months. The Median length of stay for children who were adopted was 35.6 months.

Lead Measure: Time to Jurisdiction

% of cases in which jurisdiction was established on all parents within 60 days

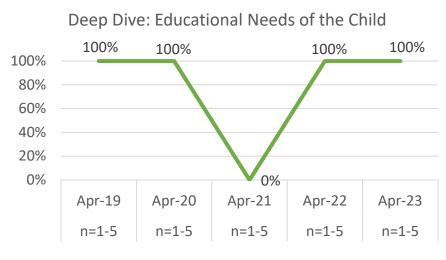

Courts aim to establish jurisdiction within 60 days of a child's placement in care. The data to the right tracks how frequently that occurs, broken into quarters by the Oregon Circuit Court.

When children are placed in substitute care, caseworkers work alongside Resource Parents and partners in the child's school systems to ensure all educational needs are met, both initially and ongoing. This includes attending and supporting the child's IEP meetings and goals.

The case review data to the left shows performance trends regarding efforts to meet children's educational needs in the cases reviewed for which the measure applied over the last 5 years.

Source: CFSR Item 17

Caseworkers and Resource Parents also partner to ensure children's mental health needs are met, as being placed in substitute care in and of itself is traumatic. Caseworkers and Resource Parents are ensuring children are getting regular and ongoing assessments and then being connected to the necessary services. If a child is prescribed psychotropic medications, the Resource Parent tracks these on a medication log and sends them to the agency. The year 2019 was left out of the chart due to no cases being applicable.

The case review data to the left shows performance trends regarding efforts to meet children's mental health needs in the cases reviewed for which the measure applied over the last 5 years.

	responsible for receiving and assigning for investigation community reports of
	child abuse
ORICWA	Means "Oregon Indian Child Welfare Act" and refers to Oregon's Law which
	upholds the Child Welfare Vision for Transformation principles and values where
	children thrive by growing up in a family, community relationships are valuable,
	self determination is fostered, and prevention efforts are critical to maintaining
	the family unit
Permanency in	This measurement captures the percent of children who leave substitute care
12 Months	to a lasting family setting in a 12mo period. This is most often reunification; a
	safe return home within 12 months of their entry to substitute care.
Permanency in	This measurement captures the percent of children who leave substitute care
13-23 Months	to permanency in a 13-23mo timeframe.
Permanency in	This measurement captures the percent of children who leave substitute care
24+ Months	to permanency in 24mo timeframe or longer.
Placement	Is a Federal Measure which shows the rate of placement moves 1,000 per day
stability	of foster for all children who entered care in a 12-month target period. Unit of
	analysis is the placement move and days in removal episode during the 12-
	month target period
PM	Means "Program Manager" and refers to a Child Welfare staff who manages a
	particular child welfare program and/or a child welfare program in a certain
	district

Qualitative	measuring, or measured by the quality of something rather than its quantity.
Quantitative	measuring, or measured by the quantity of something rather than its quality
Recurrence of	Recurrence of Maltreatment measures the rate at which children who were
Maltreatment	victims of a founded investigations were then named as victims of a
	subsequent founded abuse report within a 12mo timeframe.
Re-Entry to	Re-entry to Substitute Care measures the rate at which children who have
Substitute Care	already been placed in in substitute care and were returned home within a
	12mo timeframe are placed in substitute care again within a subsequent 12mo
	timeframe of that initial return.
Resource	Means a person who operates a home that has been approved by the
Parent	Department to provide care for an unrelated child or young adult placed in the
	home by the Department
Root Cause	Means a factor that caused a nonconformance and should be permanently
Analysis	eliminated through process improvement. The root cause is the core issue—the
	highest-level cause—that sets in motion the entire cause-and-effect reaction that
	ultimately leads to the problem(s).
SNAP	Means Supplemental Nutrition Assistance Program and refers to the federally
	funded program that offers nutrition assistance to eligible individuals and
	families
