INTRODUCTION

Oregon generally imposes a mileage-based tax on heavy vehicles operating on public roads in the state. Within specific limitations, carriers of wood chips, sand and gravel and logs, may instead, elect to pay a "flat fee." Separate flat fee rates are provided for each of these commodity-types. This analysis compares the amount of highway use tax paid by each group of flat fee taxpayers to the amount this group would have paid on a mileage basis to determine revenue neutrality across payment methods. The comparisons are made using current mileage rates applied to the 2021 reported data.

EXECUTIVE SUMMARY

The comparisons yielded the following commodity-specific results:

WOOD CHIPS

• There were no flat fee records for wood chips for 2021.

SAND & GRAVEL

- The total flat fee tax liability for hauling sand and gravel was \$307,747.36. Using 2021 data and applying 2020 rates, with axle adjustment, this total would have been \$557,185.21 on a mileage basis. Under the flat fee method, \$249,437.85 less was paid than under a mileage basis. This represents a 44.77% underpayment.
- Vehicles with a declared weight of over 104,000 lbs. had a calculated underpayment of \$235,637.23.

LOGS

- The total flat fee tax liability for hauling logs was \$8,693,093.27. Using the 2020 rate schedule, based on 100% of reported miles as taxable and an operating scenario of 50% loaded and 50% empty, this total would have been \$9,339,413.80 on a mileage basis. Under the flat fee method, \$646,320.53 less was paid than under a mileage basis. This represents a 6.92% underpayment.
- Using the 2020 rates with axle adjustments and a combination of 2021 Oregon taxable miles, based on a reporting practices analysis, and the assumption of 45% loaded/55% empty operating practices, this total would have been \$8,547,215.52 under a mileage basis. Under the flat fee method, \$145,877.75 more was paid than under a mileage basis. This represents an overpayment of approximately 1.71%.

DATA ANALYSIS

<u>Original Data Collection</u> As part of its administrative function, the Oregon Department of Transportation (ODOT) staff collects and retains copies of Form 735-9189, used by eligible motor carrier firms to report and submit their highway use taxes, using the flat fee method. Staff also makes an unaudited electronic entry of some of the information provided on these forms, including:

- the Motor Carrier Authority Number;
- the reporting period;
- the plate number from the vehicle used to haul flat fee commodities;
- the weight declared for each vehicle;
- the axle configuration;
- the commodity designated;
- Oregon miles reported;¹ and
- tax liability for the reporting period.

Staff has developed a data retrieval process that allows the assembly of the accumulated entries into a spreadsheet. This process was used to prepare the dataset for this study. Each entry is a line of information that comes from the Form 735-9189, or is an amended entry from existing ODOT databases. On-line forms completed by firms entered at http://www.odot.state.or.us/forms/motcarr/reg/9189fill.pdf were automatically assembled in the ODOT database used in this study.

After extracting the flat fee entries, staff audited the spreadsheet for any apparent data entry errors. Questionable entries were verified against the original hardcopy documents. In some cases, information was missing from the entries and/or hardcopy documentation was incomplete. Staff logged these entries separately and set them aside with explanations. Staff then sorted the remaining entries that were adequate for analysis by qualifying commodity (Wood Chips, Sand & Gravel, or Logs) and saved them in an EXCEL file - "2021 Flat Fee Filers (by category).xlsx" with worksheets labeled "Raw Data", "Chips", "S&G", and "Logs".

<u>Methodology for Analysis</u> This analysis is derived from state's dataset. All of the available documentation for the dataset was reviewed, including the log of exceptions. From this dataset, commodity-specific files for 2021 were generated for Sand and Gravel, Chips, and Logs.

The Mileage Tax Rates² tables provide the current rate schedule for each weight group used to calculate mileage taxes. Table 1 replicates the rate schedules used in this study.

¹ The only miles that are taxable are those that are run on the public roadways within Oregon. ² <u>https://www.oregon.gov/odot/Forms/Motcarr/9928-2020.pdf</u>

Testing for Revenue Neutrality of Flat Fee Firms 5 in Oregon

 TABLE 1
 Mileage Rates by Weight Group

The rates in Table 1 were used to conduct a series of explicit systematic simulations, using the verified data from 2021, to compare the effect of the flat fee payment method to the mileage payment method.

WOOD CHIPS ANALYSIS

Data There were no flat fee records for wood chips in the 2021 dataset.

WOOD CHIPS SIMULATION

There were no miles reported, or tax liability paid, for wood chips using flat fee rates.

TABLE 2Wood Chips Simulation Using 2021 Data

		Simulated Tax Paid	Difference	% over/(under)
Total Miles Reported	0			
Total Tax Liability	\$0.00			
2020 rates w/axles		\$0.00	\$0.00	0.0%

FINDINGS:

There were no flat fee records for wood chips for 2021.

SAND and GRAVEL ANALYSIS

<u>Data</u> In the "2021 Flat Fee Filers (Sorted).xlsx" dataset, 406 lines of data pertained to the firms eligible to haul sand and gravel, using a flat fee payment method. The data assigns each firm a unique carrier number, the authority number. This number is associated with the carrier firm name. The dataset also includes the reporting period and the declared weight and axle configuration for each vehicle reported on the forms.

According to the database of verified entries, firms hauling sand & gravel, under the flat fee method, reported a total of 2,547,130 miles. These firms reported transmitting \$307,747.26, under the flat fee payment method.

SAND and GRAVEL SIMULATION

The simulations are constructed using "OR_S&G_100%_97%_95%_2021.xlsx".

The reported mileage for 2021 was multiplied by the weight group rates for 2020 to calculate the mileage tax owed in lieu of a flat fee payment. The total calculated amount is \$557,185.21. Subtracting this amount from the flat fee payment yields an underpayment of \$249,437.85. This represents an underpayment of 44.77%.

Table 3 reports Sand and Gravel operations by weight group. There is a large variation in operating characteristics across the weight groups. As a result, some weight groups using the flat fee method are paying substantially more than they would have paid using the mileage method, while others are paying less. The weight group, over 104,000, has an underpayment of \$235,637.23.

If the reported mileage used in the simulation includes off-road and/or out-of-state miles, there is a potential to over-state highway mileage. Table 4 is a sensitivity analysis to illustrate the effect of over-stated highway miles by the firms hauling sand & gravel and using the flat fee method. Two adjustments were made: 3% (97% of reported miles) and a 5% (95% of reported miles), based on professional judgment. Using the 2020 rate schedule and the identified 97% of the reported miles, flat fee firms paid \$232,722.29 less than if they had paid using the mileage method. This represents a 43.06% underpayment.

Weight	Miles	Flat Fees Paid	Tax if Paid on Mileage	Difference	% Difference
44001 - 46	22,619	\$3,415.50	\$2,155.59	\$1,259.91	58.45%
46001 - 48	12,083	\$5,940.00	\$1,188.97	\$4,751.03	399.59%
54001 - 56	12,864	\$2,772.00	\$1,458.78	\$1,313.22	90.02%
56001 - 58	3,170	\$1,864.52	\$374.38	\$1,490.14	398.03%
58001 - 60	49,483	\$9,405.00	\$6,111.15	\$3,293.85	53.90%
78001 - 80	270,170	\$42,450.38	\$58,086.55	(\$15,636.17)	(26.92%)

84001 - 86	24,654	\$8,514.00	\$5,204.46	\$3,309.54	63.59%
86001 - 88	44,825	\$11,467.56	\$9,668.75	\$1,798.81	18.60%
88001 - 90	100,465	\$18,562.50	\$22,232.90	(\$3,670.40)	(16.51%)
96001 - 98	4,794	\$4,042.50	\$1,197.06	\$2,845.44	237.70%
98001 - 100	41,409	\$6,600.00	\$10,587.26	(\$3,987.26)	(37.66%)
102001 - 104	82,795	\$14,375.71	\$18,723.78	(\$4,348.07)	(23.22%)
104001 - 1055	1,834,561	\$174,955.19	\$410,592.42	(\$235,637.23)	(57.39%)
Total	2,547,130	\$307,747.36	\$557,185.21	(\$249,437.85)	(44.77%)

TABLE 3 Sand & Gravel Operations by Weight Group for 2021*

*Rounded

 TABLE 4 Sensitivity Analysis for Oregon Sand & Gravel for 2021

	Miles	Flat Fees Paid	Tax if Paid on	Difference	% over/(under)
			Mileage		
100% of Miles	2,547,130	\$307,747.36	\$557,185.21	(\$249,437.85)	(44.77%)
97% of Miles	2,470,716	\$307,747.36	\$540,469.65	(\$232,722.29)	(43.06%)
95% of Miles	2,419,774	\$307,747.36	\$529,325.94	(\$221,578.58)	(41.86%)

FINDINGS:

The total flat fee tax liability for hauling sand and gravel was \$307,747.36. Using 2021 data and applying 2020 rates, with axle adjustment, this total would have been \$557,185.21 on a mileage basis. Under the flat fee method, \$249,437.85 less was paid than under a mileage basis. This represents a 44.77% underpayment. Vehicles with a declared weight of over 104,000 lbs. had a calculated underpayment of \$235,627.23.

LOGS ANALYSIS

<u>Data</u> In the "2021 Flat Fee Filers (Sorted).xlsx" dataset, 11,674 lines of data pertain to firms eligible to haul logs using the flat fee method of taxation. The data assigns each firm a unique carrier number, the authority number. This number is associated with the carrier firm name. The dataset also includes the reporting period and the declared weight and axle configuration for each vehicle reported on the forms.

According to the database of verified entries for 2021, firms hauling logs, using the flat fee method, reported a total of 58,500,071 miles. These firms reported transmitting \$8,693,093.27 under the flat fee payment method.

LOGS SIMULATION

The simulations are constructed, using the tabs for each of the categories from the following file: "OR_LOGS_100%_95%_90%_85%_80%_2021.xlsx".

Table 5 is a sensitivity analysis using three adjustments to illustrate the effect of overstating highway miles: 5% (95% of reported miles); 10% (90% of reported miles); 15% (85% of reported miles); and 20% (80% of reported miles). Professional judgment expects the difference between off-road/out-of-state miles and total mileage to be approximately 15%.

The sensitivity analysis also quantifies the effect of loaded and empty mileage: 50% loaded and 50% empty; 45% loaded and 55% empty; 40% loaded and 60% empty; and 30% loaded and 70% empty.

It was necessary to quantify the effect of loaded and empty mileage because mileage based rates for loaded trucks are higher than they are for unloaded trucks. The 46,000 lbs. rate applies to "decked miles", while loaded trucks have higher declared weights. The sensitivity analysis illustrates the results of the different operating assumptions made in the paragraph above.

	100% of miles	95% of miles	90% of miles	85% of miles	80% of miles
Miles	58,500,071	55,575,067.5	52,650,063.9	49,725,060.4	46,800,056.8
Flat Fee Liability	\$8,693,093.27	\$8,693,093.27	\$8,693,093.27	\$8,693,093.27	\$8,693,093.27
50% loaded	\$6,551,885.42	\$6,224,291.15	\$5,896,696.87	\$5,569,102.60	\$5,241,508.33
50% empty	\$2,787,528.38	\$2,648,151.96	\$2,508,775.54	\$2,369,399.13	\$2,230,022.71
Total	\$9,339,413.80	\$8,872,443.11	\$8,405,472.42	\$7,938,501.73	\$7,471,531.04
Difference	(\$646,320.53)	(\$179,349.84)	\$287,620.85	\$754,591.54	\$1,221,562.23
% over/(under)	(6.92%)	(2.02%)	3.42%	9.51%	16.35%
45% loaded	\$5,896,696.87	\$5,601,862.03	\$5,307,027.19	\$5,012,192.34	\$4,717,357.50

Difference	\$859,422.28	\$1,251,105.83	\$1,642,789.38	\$2,034,472.93	\$2,426,156.48
% over/(under)	10.97%	16.81%	23.30%	30.55%	38.71%

TABLE 5Sensitivity Analysis for Logs for 2021*

*Rounded

The total flat fee tax liability for hauling logs was \$8,693,093.27. Using the 2020 rate schedule, based on 100% of reported miles as taxable and an operating scenario of 50% loaded and 50% empty, this total would have been \$9,339,413.80 on a mileage basis. Under the flat fee method, \$646,320.53 less was paid than under a mileage basis. This represents a 6.92% underpayment.

REPORTING PRACTICES ANALYSIS

There are concerns regarding the reporting practices of the firms using the flat fee method. As mentioned previously, the reported miles are assumed to be the Oregon taxable miles. This assumption requires an eligible firm to calculate their total miles and then subtract all the off-road and out-of-state miles from their total miles. Professional judgment suggests it is unlikely that firms hauling logs would run 100% of their miles on road, given the nature of the business practices of hauling logs from the forest to the mill. The flat fee reports for logs should therefore show a difference between the total miles and the reported Oregon taxable miles over a year's worth of activity.

An audit of the actual reports (Form 735-9189) was conducted to determine if firms hauling logs were reporting their Oregon taxable miles correctly. Incorrectly filled-in forms may contain the following errors: firm reports no miles (simply indicating their flat fee tax liability only); firm indicates the difference in the odometer readings and does not fill-in the total miles or the Oregon taxable miles; firm calculates and reports total miles and does not fill-in anything for the Oregon taxable miles; firm calculates the total miles but does not report total miles and reports their total miles as their Oregon taxable miles; or a firm calculates the total miles only and fill-ins both the total miles and the Oregon taxable miles with this same number. The correct procedure is to calculate the total miles from the difference in the odometer or hub meter readings (subtracting the beginning readings from the ending readings) and then subtract all off-road and out-of-state miles and report this number for their Oregon taxable miles.

Hard copies of the original filed reports were provided by ODOT staff and were reviewed to determine whether the forms used for reporting flat fee log activities were properly completed. The reporting practices analysis found that of the 11,674 lines in the database, 8078 lines were correctly completed, approximately 69.20%.

The simulations were then rerun, using 100% of the taxable miles for those firms who filed correctly, and 85% (representing a 15% difference between total miles and Oregon taxable miles) of the taxable miles for the remaining firms. Firms providing no mileage information were noted as exceptions and set aside. Table 6 indicates the results using a combination of the correctly reported miles and 85% of the total miles of the remaining firms. Thus, in the analysis, firms reporting correctly are calculated at 100% of their reported Oregon miles, while firms reporting incorrectly are calculated at 85% of their total reported miles. The sum of these two calculations is intended to provide the most realistic set of findings for analyzing revenue neutrality for logs.

	Combination Miles
Miles	55,787,788
Taxes Liability	\$8,693,093.27
50% loaded	\$6,247,887.34
50% empty	\$2,658,288.10
Total	\$8,906,175.44
Difference	(\$213,082.17)
% over/(under)	(2.39%)
45% loaded	\$5,623,098.61
55% empty	\$2,924,116.91

30% loaded	\$3,748,732.41
70% empty	\$3,721,603.33
Total	\$7,470,335.74
Difference	\$1,222,757.53
% over/(under)	16.37%

 TABLE 6
 Sensitivity Analysis Using Combined Miles for Logs for 2021

FINDINGS:

Using the 2020 rates with axle adjustments and a combination of 2021 Oregon taxable miles, based on a reporting practices analysis, and the assumption of 45% loaded/55% empty operating practices, this total would have been \$8,547,215.52 under a mileage basis. Under the flat fee method, \$145,877.75 more was paid than under a mileage basis. This represents an overpayment of approximately 1.71%.

APPENDICES

Variable Name	Source	Description
ID	ODOT	Unique number for record line
Authority Number	ODOT	Unique identification number for carrier
Reporting Period	ODOT	Month of operation tax is being reported
Plate Number	ODOT	License plate of truck, blank if trucks reported together as fleet
Axle Count	ODOT	Number of axles reported
State	ODOT	State where firm resides
Declared Weight	ODOT	Weight category declared by firm
WMT_rate_axles	Report	Rate from Table 1 Mileage Rates by Weight Group
Tax Liability	ODOT	Tax paid, number field
Commodity	ODOT	Wood Chips
Oregon miles	ODOT	Miles driven in Oregon during reporting period
Bg Odom	ODOT	Beginning odometer (if available electronically)
End Odom	ODOT	Ending odometer (if available electronically
Calc Or Miles	Report	Ending odometer – beginning odometer
WMT_SIM	Calculation	WMT_rate * Oregon miles
DIFF	Calculation	Tax Liability – WMT_SIM
Comment	ODOT	Information provided by ODOT staff

APPENDIX A: Variables Used in Wood Chips Simulation

Characteristics of data

	Reported Miles	Reported Weight	Tax Liability
Total	0	*	0
Average	0	0	0
Median	0	0	0
Standard Deviation	0	0	0

* Not applicable

Variable Name	Source	Description
ID	ODOT	Unique number for record line
Authority Number	ODOT	Unique identification number for carrier
Reporting Period	ODOT	Month of operation tax is being reported
Plate	ODOT	License plate of truck, blank if trucks reported together as fleet
Axle Count	ODOT	Number of axles reported
State	ODOT	State where firm resides
Declared Weight	ODOT	Weight category declared by firm
WMT_rate_axles	Report	Rate from Table 1 Mileage Rates by Weight Group
Tax Liability	ODOT	Tax paid, number field
Commodity	ODOT	Sand & Gravel
Oregon miles	ODOT	Miles driven in Oregon during reporting period
Bg Odom	ODOT	Beginning odometer (if available electronically)
End Odom	ODOT	Ending odometer (if available electronically
Calc Or Miles	Report	Ending odometer – beginning odometer
WMT_SIM	Calculation	WMT_rate * Oregon miles
DIFF	Calculation	Tax Liability – WMT_SIM
97%_M	Calculation	(Oregon miles * .97)*WMT_rate
97%_D	Calculation	Tax Liability – 97%_M
95%_M	Calculation	(Oregon miles * .95)*WMT_rate
95%_D	Calculation	Tax Liability – 95%_M
Comment	ODOT	Information provided by ODOT staff

APPENDIX B: Variables Used in Sand and Gravel Simulation

Characteristics of data based on 406 lines of data from 31 firms

	Reported Miles	Reported Weight	Tax Liability
Total	2,547,130	*	\$307,747.36
Average	6,274	91,800	\$758.00
Median	4,511	102,500	\$845.63
Standard Deviation	5,643	17,900	\$147.98

* Not applicable

APPENDIX C: Variables Used in Logs Simulation 100% of Reported Miles

,

Source	Description	
ODOT	Unique number for record line	
ODOT	Unique identification number for carrier	
Report	Recorded Oregon miles properly = O; total miles = T; total miles reported as Oregon miles = OT	
ODOT	Month of operation tax is being reported	
ODOT	License plate of truck, blank if trucks reported together as	
	fleet	
	Number of axles reported	
	State where firm resides	
ODOT	Weight category declared by firm	
Report	Rate from Table 1 Mileage Rates by Weight Group	
	Rate from Table 1 Mileage Rates for 46,000	
ODOT	Tax paid, number field	
ODOT	Logs	
ODOT	Miles driven in Oregon during reporting period	
ODOT	Beginning odometer (if available electronically)	
ODOT	Ending odometer (if available electronically	
Report	Ending odometer – beginning odometer	
Calculation	(rate_load) *.5 * Oregon miles	
Calculation	(rate_empty) * .5 * Oregon miles	
Calculation	(load_sim) + (empty_sim)	
Calculation	Tax Liability – total_sim	
Calculation	(rate_load) *.45 * Oregon miles	
Calculation	(rate_empty) * .55 * Oregon miles	
Calculation	(load_45) + (empty_55)	
Calculation	Tax Liability – total_45	
Calculation	(rate_load) *.4 * Oregon miles	
Calculation	(rate_empty) * .6 * Oregon miles	
Calculation	$(load_4) + (empty_6)$	
Calculation	Tax Liability – total_4	
Calculation	(rate_load) *.3 * Oregon miles	
Calculation	(rate_empty) * .7 * Oregon miles	
Calculation	(load_3) + (empty_7)	
Calculation	Tax Liability – total_3
