STANDARD DRAWING NOS.

RD150 - Slope Rounding
RD160 - Maintenance Pad Details

RD300 - Trench Backfill, Bedding, Pipe Zone and Multiple Installations
RD312 - Subsurface Drain
RD316 - Sloped Ends for Metal Pipe
RD317 - Culvert Embankment Protection and Riprap Pads
RD318 - Sloped Ends for Concrete Pipe
RD319 - Miscellaneous Culvert Details
RD320 - Paved End Slope for Culverts 60" Maximum Pipe Size
RD326 - Coupling Bands for Corrugated Metal Pipe
RD332 - Pipe Slope Anchors - Concrete
RD335 - Standard Storm Sewer Manhole
RD336 - Standard Manhole Details
RD339 - Pipe To Structure Connections
RD340 - Storm Sewer Pollution Control Manhole
RD342 - Shallow Manholes
RD344 - Standard Manhole Base Section
RD345 - Pipe to Manhole Connections
RD346 - Large Precast Manhole
RD348 - Manhole with Inlet
RD350 - Sanitary Sewer Piped Inside Drop Connection for Manholes
RD356 - Manhole Covers and Frames
RD360 - Manhole Frame Adjustment
RD362 - Sanitary Cleanout
RD363 - Gutter Transition At Inlet
RD364 - Concrete Inlets Type G-1, G-2, G-2M, & G-2MA
RD365 - Frames & Grates for Concrete Inlets
RD366 - Concrete Inlets Type CG-1, CG-2
RD370 - Ditch Inlet Type D
RD376 - Miscellaneous Drainage Structures Siphon Box, Inlet Cap & Inlet Adjustment
RD380 - Fill Height Table for Aluminum & Steel Corrugated Pipe
RD386 - Fill Height Table for Circular Concrete Pipe
RD388 - Fill Height Tables for PVC Pipe
RD390 - Fill Height Table for Corrugated HDPE Pipe
RD391 - Fill Height Table for Steel Reinforced HDPE Pipe
RD393 - Fill Height Tables for Polypropylene Pipe
RD398 - Culvert ID Marker
RD399 - Stormwater Treatment and Storage Facility Field Markers

RD402 - Midwest Guardrail System Types
RD403 - Midwest Guardrail System Wood Post and Block
RD407 - Midwest Guardrail System (W-Beam)
RD409 - Thrie-Beam Guardrail
RD410 - Thrie-Beam Guardrail Transition
RD416 - Midwest Guardrail System Standard Hardware (Nuts, Bolts, Washers & Misc.)
RD417 - Midwest Guardrail System End Sections
RD419 - Midwest Guardrail System Grading for Terminals
RD420 - Midwest Guardrail System Non-Flared Energy-Absorbing Terminal
RD421 - Midwest Guardrail System Flared Energy-Absorbing Terminal (MFLEAT)
RD438 - Midwest Guardrail System Downstream Anchor Terminal (DAT)
RD482 - Midwest Guardrail System Type 3 (Nested W-Beam)

RD500 - 32" Concrete Barrier Type "F" Precast
RD502 - Securing 32" Type "F" and Tall 42" Precast Concrete Barrier to the Roadway
RD505 - Concrete Barrier Cast-In-Place
RD510 - Concrete Barrier Terminal
RD515 - Median Barrier Anchoring Details for Temporary Installation and Maintenance Purposes Only
RD516 - Securing Concrete Barrier to Roadway for Temporary Installation and Maintenance Purposes Only
RD530 - Guardrail Transition to Concrete Barrier
RD545 - Precast Tall (42") Concrete Barrier
RD546 - Precast Tall (42") Concrete Barrier
RD610 - Asphalt Concrete Pavement (ACP) Details
RD615 - Surface Edge Details

RD700 - Curbs
RD701 - Drainage Curbs
RD705 - Islands
RD706 - Traffic Separators and Transitions
RD707 - Island Nose Treatments
RD710 - Accessible Route Island
RD711 - Accessible Route Channelized Islands
RD715 - Approaches and Non-Sidewalk Driveways
RD720 - Curb Line Sidewalks
RD721 - Separated Sidewalks
RD722 - Sidewalk Joints and Transition Panels
RD750 - Curb Line Sidewalk Driveways Or Alleys (Options M & N) Local Jurisdictions

STANDARD DRAWING NOS. (cont.)

RD810 - Barbed and Woven Wire Fences
RD815 - Chain Link Fence
RD820 - Fence Gates

RD902 - Detectable Warning Surface Details
RD904 - Detectable Warning Surface Placement For Curb Ramps
RD905 - Detectable Warning Surface Placement For Directional Curbs
RD906 - Detectable Warning Surface Placement For Accessible Route Island
RD910 - Perpendicular Curb Ramp
RD912 - Perpendicular Curb Ramp
RD913 - Perpendicular Curb Ramp With Closure
RD920 - Parallel Curb Ramp
RD950 - End of Walk Curb Ramp
RD960 - Unique Curb Ramp

RD1000 - Construction Entrances
RD1006 - Check Dams Type 2 and 6
RD1010 - Inlet Protection Type 2, 3, 6, 7, 10 and 11
RD1015 - Inlet Protection Type 4
RD1030 - Sediment Barrier Type 2, 3 and 4
RD1032 - Sediment Barrier Type 8
RD1040 - Sediment Fence
RD1055 - Slope and Channel Matting
RD1070 - Concrete Truck Wash Out

BR115 - Slope Paving
BR157 - Asphaltic Plug Joint Seal
BR190 - Horizontal Fall Arrest Lifeline Installation
BR191 - Horizontal Fall Arrest Lifeline Details
BR195 - Bridge ID Marker
BR203 - Transition Type "F" Concrete Rail To Guardrail
BR290 - Type "F" Concrete Rail, 42 Inch
BR445 - Precast Prestressed Boxes And Slabs Details

TM200 - Sign Installation Details
TM201 - Miscellaneous Sign Placement Details
TM204 - Flag Board Mounting Details
TM211 - Signing Details US & Interstate Route Shields
TM212 - Signing Details Oregon Route Signs
TM220 - Multi-Post Installations With Auxiliary Signs
TM221 - Signing Details Milepost Markers
TM222 - Installation Details Milepost Marker Posts
TM223 - Conventional Roads Directional Sign Layout Street Name Signs
TM224 - Freeway/Expressway Directional Sign Layout
TM225 - Exit Number And Core Signing Details
TM230 - Mounting Details For Removable Legend 4" Through 8" Letters & Numbers
TM231 - Mounting Details For Removable Legend 10" Through 12" Letters & Numbers
TM232 - Mounting Details For Removable Legend 13 1/3" Through 18" Letters & Numbers
TM233 - Mounting Details For Removable Legend Various Arrow Sizes
TM240 - Crosswalk Closure Detail

TM302 - Pad-Mount Illumination Control Cabinet

TM450 - Mast Arm Pole Details
TM457 - Pedestal Foundation and Traffic Signal Assembly
TM460 - Vehicle Signal Details
TM462 - Vehicle Signal Bracket & Sign Bracket (Type B) Details
TM466 - Radar Mounting Details
TM467 - Pedestrian Signal Mount And Pedestrian Pushbutton Details
TM470 - Wire & Cable Installation
TM471 - Trenching & Conduit Installation
TM472 - Junction Boxes/Hand Holes
TM482 - Controller Cabinet & Service Cabinet Foundation Details
TM485 - Service Cabinet Wiring Details

TM500 - Pavement Marking Standard Detail Blocks
TM501 - Pavement Marking Standard Detail Blocks
TM502 - Pavement Marking Standard Detail Blocks
TM503 - Pavement Marking Standard Detail Blocks
TM504 - Pavement Marking Standard Detail Blocks
TM515 - Pavement Markers
TM517 - Recessed Pavement Markers
TM520 - Durable Pavement Markings Method 'A' & Method 'D' Surface Installed Profiled
TM521 - Durable & High Performance Pavement Markings Surface & Groove Installed Non-Profiled
TM530 - Intersection Pavement Markings (Crosswalk, Stop Bar & Bike Lane Stencil)
TM531 - Turn Arrow Marking Details
TM539 - Median And Left Turn Channelization Details
TM547 - Freeway Entrance Ramp Pavement Markings

STANDARD DRAWING NOS. (cont.)

TM551 - Freeway Exit Ramp Pavement Markings
TM560 - Alignment Layout: General
TM561 - Alignment Layout: Left Turn Lane, Centerline & Medians
TM570 - Traffic Delineators
TM571 - Traffic Delineators Steel Post Details
TM575 - Traffic Delineator Installation For Freeways
TM576 - Traffic Delineator Installation For Non-Freeways

TM600 - Multi-Post Breakaway Sign Supports Notes
TM601 - Multi-Post Breakaway Sign Supports Details
TM602 - Triangular Base Breakaway Multi-Directional Slip Base Design
TM621 - Std. Monotube Sign/VMS Cantilever General Design Criteria
TM622 - Std. Monotube Sign/VMS Cantilever Notes
TM623 - Std. Monotube Sign/VMS Cantilever Misc. Details
TM624 - Std. Monotube Sign/VMS Cantilever Mounting Details
TM625 - Std. Monotube Sign/VMS Cantilever Luminaire Mounting Details
TM626 - Std. Monotube Sign/VMS Cantilever Details
TM628 - Std. Monotube Sign/VMS Support Drilled Shaft Details
TM629 - Slip Base And Fixed Base Luminaire Supports General Details And Design Criteria
TM630 - Slip Base Luminaire Supports Base Plate & Footing Details
TM631 - Fixed Base Luminaire Supports Base Plate & Footing Details
TM635 - Breakaway Sign & Luminaire Supports - Support Location Guidelines
TM650 - Traffic Signal Supports General Details & Design Criteria
TM651 - Traffic Signal Supports Notes and Reactions
TM652 - Traffic Signal Supports Steel Details
TM653 - Traffic Signal Supports Foundation Requirements
TM654 - Traffic Signal Supports Recessed Terminal Cabinet
TM670 - Wood Post Sign Supports
TM671 - 3 Second Gust Wind Speed Map
TM672 - LRFD Ultimate Design Wind Speed Map
TM675 - Extruded Aluminum Panels
TM676 - Sign Attachments
TM677 - Sign Mounts
TM678 - Secondary Sign Mounting Details
TM679 - Signal Mast Arm Street Name Sign Mounts
TM681 - Perforated Steel Square Tube (PSST) Sign Support Installation
TM687 - Perforated Steel Square Tube (PSST) Anchor Foundation
TM688 - Perforated Steel Square Tube (PSST) Slip Base Foundation

TM800 - Tables, Abrupt Edge and PCMS Details
TM810 - Temporary Pavement Markings
TM820 - Temporary Barricades
TM821 - Temporary Sign Supports
TM822 - Temporary Sign Supports
TM830 - Temporary Concrete Barrier And Rumble Strip Details
TM831 - Temporary Impact Attenuators
TM832 - Temporary Impact Attenuators
TM833 - Temporary Impact Attenuators
TM840 - Closure Details
TM841 - Intersection Work Zone Details
TM842 - Signalized Intersection Details
TM843 - Multi-Lane Signalized Intersection Details
TM844 - Temporary Pedestrian Accessible Routing
TM845 - Temporary Sidewalk Ramps
TM850 - 2-Lane, 2-Way Roadways
TM855 - 2-Lane, 2-Way Roadways
TM860 - Freeway Sections - Ramps
TM861 - Freeway Sections
TM862 - Freeway Sections

Ⓑ = Depth to top of longitudinal bars

NOTE:
Spacing and depth of longitudinal steel is specific to each project.

PAVEMENT AND STEEL DETAILS

GENERAL NOTES FOR ALL DETAILS:

1. *Pavement width, pavement thickness, the crown cross-slope, and related details are shown elsewhere in the plans.*
2. *Install tie bars for longitudinal contact joint by drilling and securing according to the applicable specifications for resin bonded anchors. When approved by the Engineer, tie bars may be installed by inserting into plastic concrete at longitudinal contact joint.*
3. *Use reinforcing steel conforming to ASTM A706 or AASHTO M31 (ASTM A615) grade 60. Use full length bars as shown, and place them a minimum 2" clear of the nearest face of conc. unless shown or noted otherwise.*
4. *Construct a longitudinal joint (Section B-B or Section C-C) for pavement widths of more than 15 ft. Locate these joints within 6 in. of the lane line unless the joint location is shown elsewhere on the plans.*
5. *When transverse construction joint ties new CRCP to existing, use a resin bonded anchor method to tie into the existing CRCP.*

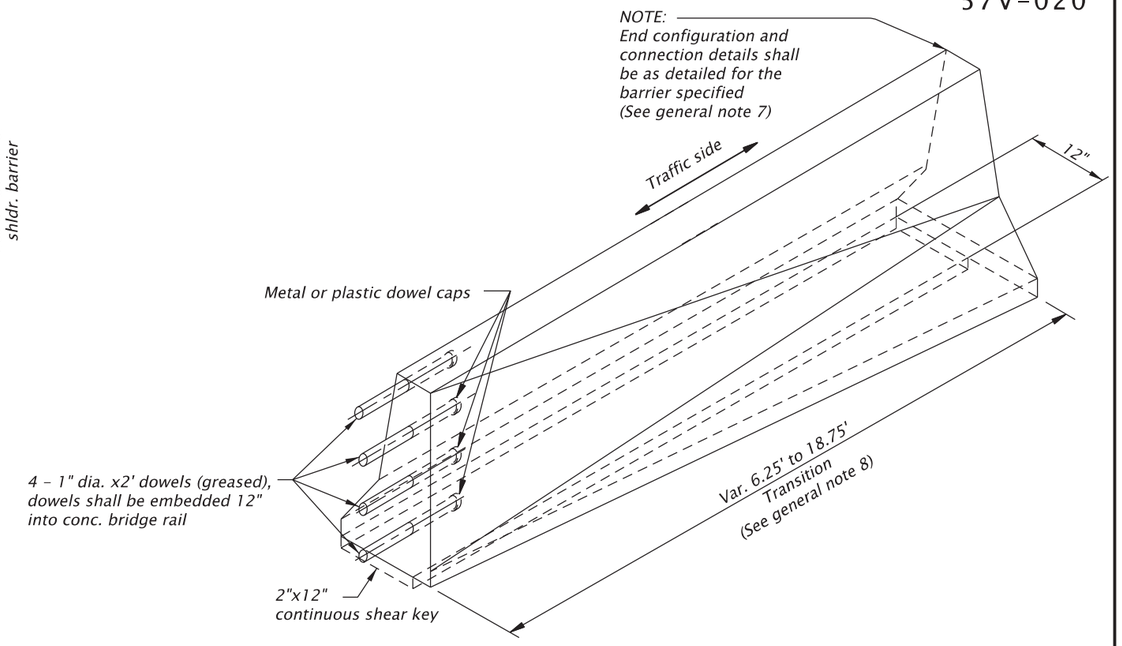
TALL CONCRETE BARRIER TO 42" TYPE F BRIDGE RAIL TRANSITION



(Looking at side away from traffic)

CAST IN PLACE TRANSITION

GENERAL NOTES FOR ALL DETAILS ON THIS SHEET:

1. *All reinf. shall be full length as shown and shall be 1½" clear of nearest face of concrete, unless otherwise shown.*
2. *See dwg. no. RD545 for additional details.*
3. *See dwg. nos. RD502 & RD545 for securing concrete barrier to roadway.*
4. *See dwg. no. BR290 for Conc. Bridge Rail, Type "F", 42".*
5. *All pins, bolts, dowels, loop bars, and connectors shall be hot-dip galvanized after fabrication.*
6. *Not for use on bridge approach slab.*
7. *Field verify end configurations of connecting barriers prior to forming connections at transitions. Dowelled connection is an acceptable alternative. See dwg. no. RD505 for details not shown.*
8. *Normal length for cast-in-place transition is 12'-6". Site conditions may require varying lengths between 6'-3" and 18'-9". Field verify transition length and end configurations of connecting barriers.*

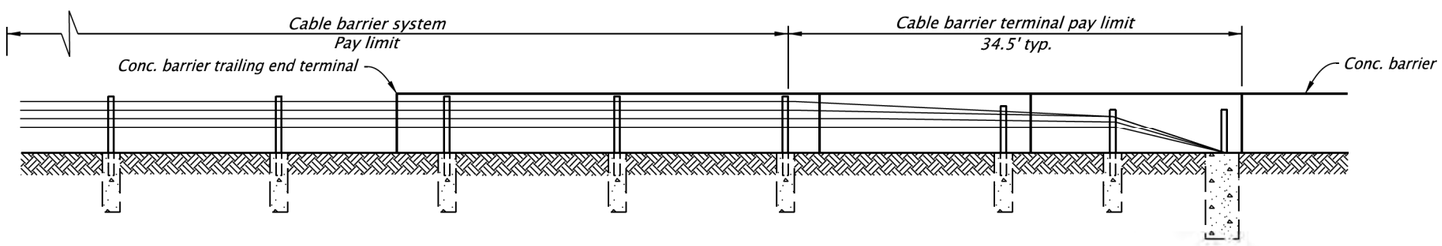
PLAN



ELEVATION

CABLE BARRIER SYSTEM DETAILS

Notes:
1. Cable barrier shall be 4-strand CBS TL-3.
2. Max. deflection of cable barrier shall be 8'.
3. Flare rate 70:1.
   Install two-way retro-reflective post caps at 20' spacing.
4. Install accordinng to manufacturer's recommendations.

GENERAL NOTES:

1. A check (✓) indicates column heading applies.
2. A new pipe culvert installation shall be of like material throughout.
3. Extension of existing metal culverts may be of unlike metal or corrugations. For connecting details, see Std. Dwg. No. RD326.
4. Dimensions shown are nominal.
5. All pipes shall conform to the AASHTO specification applicable for the type of material and the diameter of the pipe involved. column heading applies.

FOOTNOTES:

(1) Design height of cover is the critical design height used to select pipe materials. The height of cover for any given run of pipe may vary. Design height of cover shall be measured to subgrade.

(2) Cross-sectional dimensions may vary with different materials. When galvanized iron or steel and aluminum are acceptable alternates use a separate line for each type of material.

(3) Cross-sectional shape of pipe normal to longitudinal axis, prior to loading
- A = Pipe - Arch
- R = Round
- E = Elliptical (5% nominal elongation)

(4) Abbreviations for protective coatings for metal pipe
- PM = Polymeric, 10 Mil. thkn. coated both sides
- PO = Polyethylene inside lining, polymeric outside
- U = Uncoated
- CIM = Chevron industrial membrane
- Ep = Epoxy coated

(5) Abbreviations for existing pipe materials
- AB = Asbestos cement
- Al = Corrugated aluminum
- Co = Concrete
- Pl = Plastic
- St = Corrugated steel
- X = Other material, see remarks column

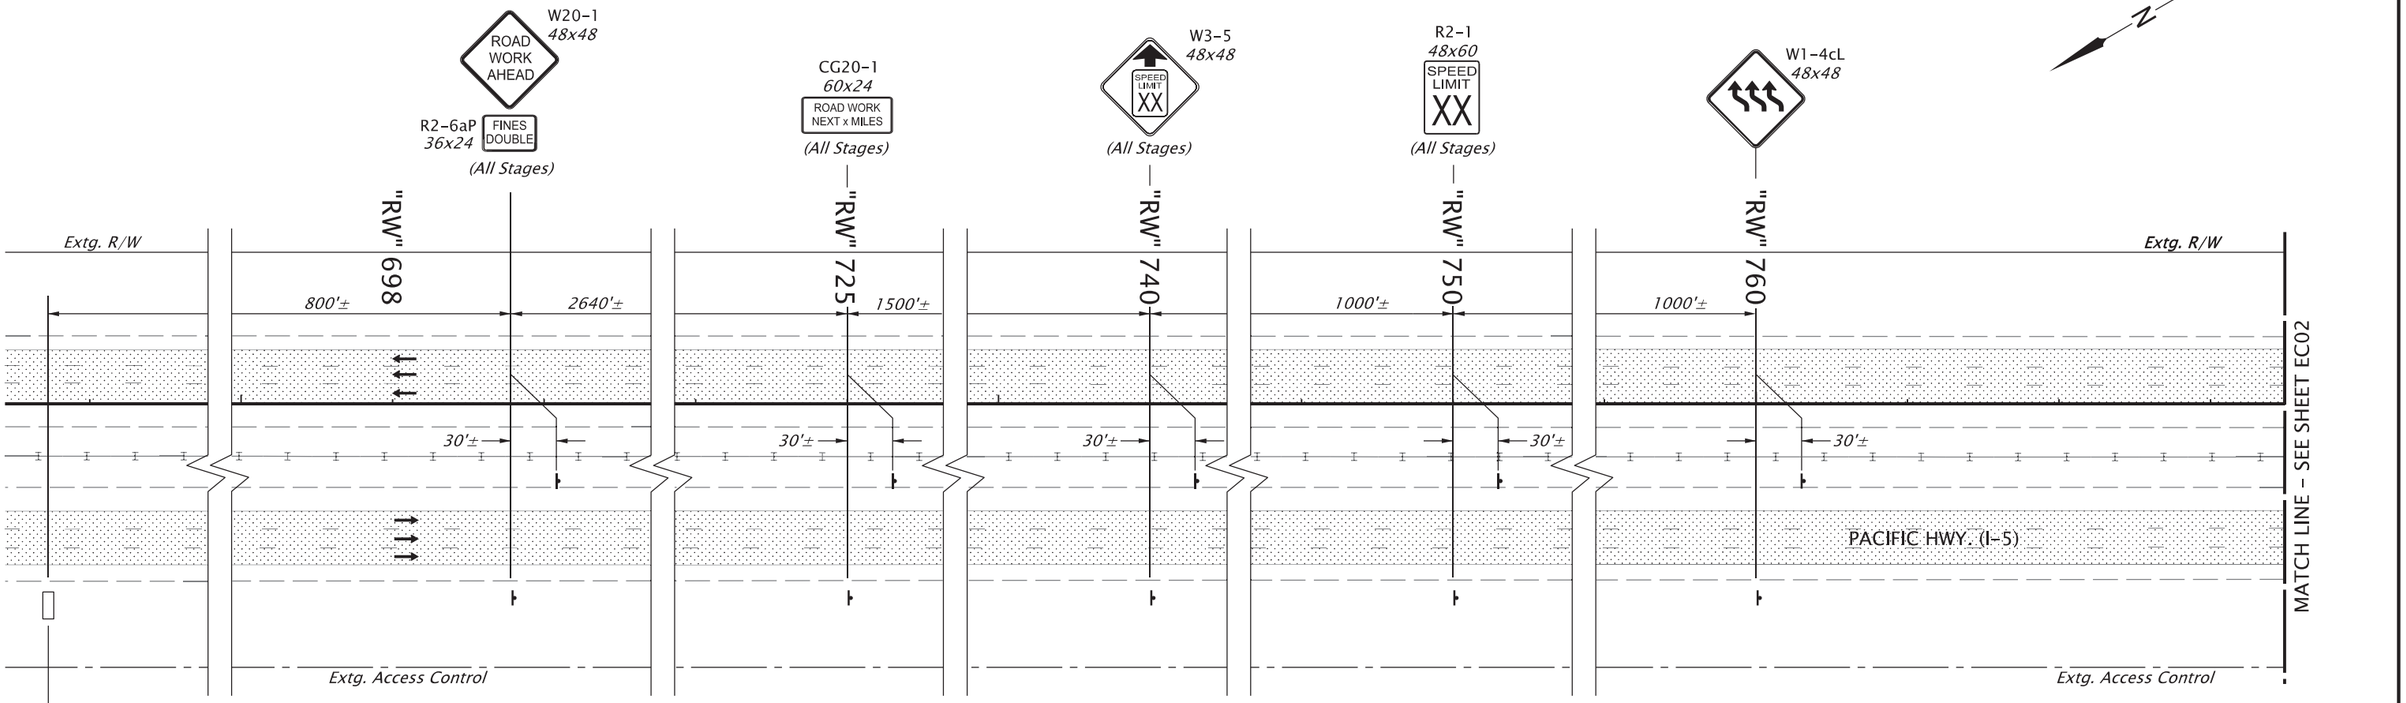
STAGE I
Phase 1
I-5 MAINLINE and INTERCHANGE RAMPS



LANES SHIFT AHEAD	WORKZONE REDUCED SPEED

PORTABLE CHANGABLE MESSAGE SIGN (PCMS)
Recommended Messages

GENERAL NOTES:

1. *Signs shown on the plans are the minimum required. All signs to be new or like new condition. Determination of sign condition to be made by engineer.*
2. *For sign numbers refer to the Manual on Uniform Traffic Control Devices (MUTCD) and the ODOT Sign Policy and Guidelines for the State Highway System.*
3. *Pedestrian pushbuttons at existing and temporary traffic signals shall remain accessible at all times. If a crosswalk crossing is closed at an intersection, add appropriate signing per the MUTCD and cover the affected pedestrian signal heads.*
4. *During construction at signalized intersections, traffic signals shall be turned off when flaggers are controlling traffic. Coordinate temporary modifications to signal operations with ODOT Traffic Operations.*
5. *The location of all signs and temporary traffic control devices shall be verified by the Engineer prior to placement. Adjustments to temporary sign and PCMS locations on these plans may be required.*
6. *Plans to be accompanied by ODOT Standard Drawings BR203, RD410, RD420, RD500, RD510, RD530, RD545, TM204, TM211, TM212, TM670, TM671, TM677, TM681, TM687, TM688, TM800, TM810, TM820, TM821, TM822, TM830, TM831, TM832, TM833, TM840, TM841, TM842, TM843, TM844, TM845, TM850, TM855, TM860, TM861, and TM862.*
7. *Install temporary striping when necessary to delineate travel lanes as shown in the traffic control plans and as directed by the project engineer. Remove existing striping that conflicts with temporary striping shown on plans.*
8. *Maintain temporary striping for the duration of construction and until permanent striping is installed.*
9. *The widths of the travel lanes as shown on the staging plans are minimum widths and must be maintained at all times.*
10. *Maintain existing signs unless otherwise shown or conflict with plans.*

CONSTRUCTION NOTES (cont'd):

(3) *Shift existing barrier west 5' and use as temporary barrier. Connect to new temporary barrier at Sta. "RW" 814+15.*

(4) *At the end of Stage I Phase 1, construct remaining on-alignment portion of SB entrance ramp south of Sta. "D2" 815+50 and tie into existing entrance ramp under 1-week full ramp closure. See Sheet EA21 for ramp closure details and Sheet EB05 for detour. Do not close more than one ramp at a time.*

(5) *Match existing striping at Sta. "RW" 810+40.*

(6) *Shift SB I-5 lanes to the east an additional 3' from Sta. "RW" 814+50 to Sta. "RW" 846+50 to accommodate entrance ramp construction.*

(7) *Shift NB I-5 lanes to the west 9' from Sta. "RW" 775+40 to "RW" 810+40 to accommodate shoulder widening and entrance ramp construction.*

CONSTRUCTION NOTES:

1. *Move NB I-5 traffic onto temporary crossover under nighttime two-lane closure per Sheet EA21. Divert the single lane of traffic onto the I-5 NB exit ramp and I-5 NB entrance ramp. Flag all approaches at ramp terminal intersection.*
2. *Construct new CRCP and AC shoulders at each end of the new over-crossing bridge, as shown. Install permanent guardrail and barrier along right shoulder on bridge ends. Connect permanent shoulder barrier to bridge rail ends. See Sheet C09A.*
3. *Install coffer dam for driving piling and constructing spread footings. Construct east portion of new interchange bridge. Limited - duration full closures of Ehlen Road may be conducted to complete this work. See Sheet EB01 and Sheet EB02 for detour details.*
4. *Maintain SB I-5 lanes in shifted position from Stage I Phase 2.*

General Notes:

1. *Match points to existing pavement marking and station call-outs are approximate and shall be field verified. Exact locations are to be determined by the Engineer.*
2. *All longitudinal permanent pavement markings along I-5 shall be Method B: Thermoplastic, Wet Weather, Grooved, Non-Profiled except as noted. See Section 00865 in the Special Provisions. All longitudinal pavement markings along Ehlen Rd and Bents Rd shall be Method A: Thermoplastic, Extruded, Profiled except as noted. See Section 00865 of the Special Provisions.*
3. *All pavement bars shall be Type B-HS. See section 00867 in the Special Provisions.*
4. *All reflective pavement markers shall be Type 1. Reflective pavement markers along I-5 shall be recessed per Standard Drawing TM517.*
5. *Install Type 1 traffic delineators at entrance and exit ramp gores per Standard Drawings TM570, TM571, and TM575.*

RUMBLE STRIP
TYPICAL SHOULDER INSTALLATION

GENERAL NOTES:

1. Install rumble strips on left and right shoulders as shown.

2. Omit rumble strips:
   - on bridge decks
   - on Portland cement concrete surfaces
   - at interchange ramps as shown
   - other locations as directed

3. Install rumble strips on right-side shoulders with a width of 6.5' or greater (7.5' or greater where adjacent to barrier or guardrail).

4. Install rumble strips on left-side shoulders with a width of 3.5' or greater (5.5' or greater where adjacent to guardrail or barrier).

5. Shoulder width is measured from the center of the edge line to the edge of pavement, or face of guardrail or barrier where present.

6. Drawing not to scale.

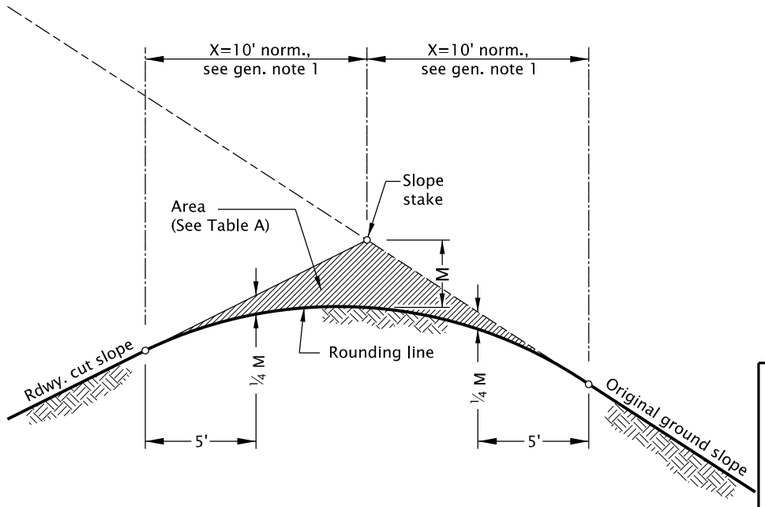
DETAIL "A"



DETAIL "B"

GENERAL NOTES FOR ALL DETAILS ON THIS SHEET:

1. Extend slope rounding 10' or to right of way line, whichever is less. Use the same X dimension on both sides of slope break point.
2. Table A values are only for slope rounding with an X dimension of 10'.
3. See project plans for details not shown.

The selection and use of this Standard Drawing, while designed in accordance with generally accepted engineering principles and practices, is the sole responsibility of the user and should not be used without first consulting a Registered Professional Engineer.

All materials shall be in accordance with the current Oregon Standard Specifications.

GENERAL NOTES FOR ALL DETAILS ON THIS SHEET:

1. All dimensions are subject to necessary tolerances to meet manufacturer's requirements for plate arrangements.
2. See Std. Dwgs. RD300 or RD304 for installation details.
3. All embankment slopes to be warped where required to provide end projections as shown.
4. Minimum elevation of top of riprap at inlet and outlet is one diameter (D) or one foot higher than design headwater or tailwater elevation respectively whichever is greater.
5. Slope protection required for hydraulic installations. See Table A on Std. Dwg. RD317.
6. $\frac{H}{15}$ and $\frac{H1}{15}$ only applicable for non-hydraulic applications.
7. Open ends of pipes normally require a site specific design, and may require special treament (Slope ends, culvert embankment protection, paved end slopes, safety end sections, or other measures). See special details or Standard Drawings as called for on plans.
8. Cross-sectional dimensions may vary with different materials.
9. Full bevel cuts are not recommended for multiple radius shaped pipes.
10. For pipes with skew no.'s 50, 70, 110 or 130, omit the top step (Y). (For skew diagram, see Std. Dwg. RD319).
11. See Std. Dwg. RD317 for culvert embankment protection and riprap pads (When reqd.).

The selection and use of this Standard Drawing, while designed in accordance with generally accepted engineering principles and practices, is the sole responsibility of the user and should not be used without first consulting a Registered Professional Engineer.

All materials shall be in accordance with the current Oregon Standard Specifications.

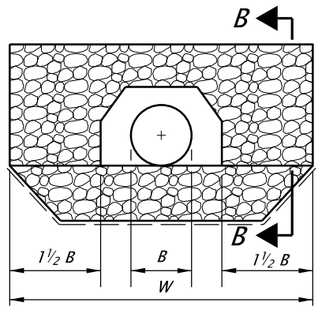
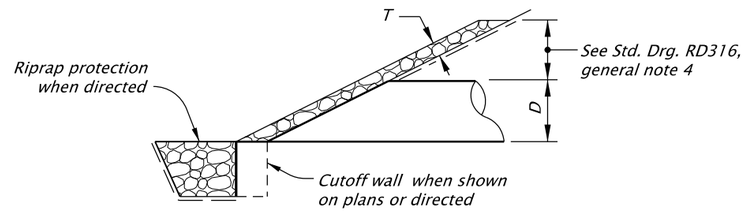
SECTION A-A

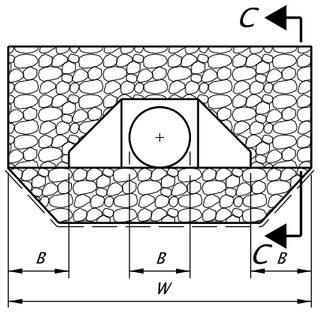
SLOPED OR PROJECTING END

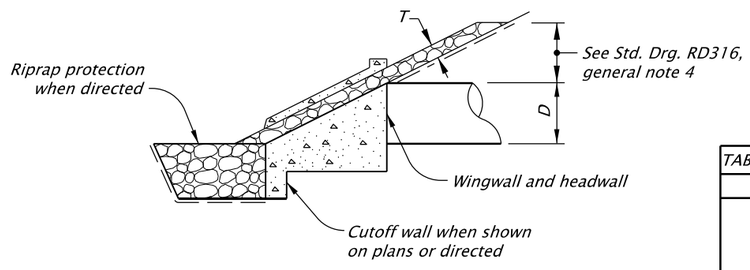




SECTION B-B

SLOPED END WITH SLOPE PAVING



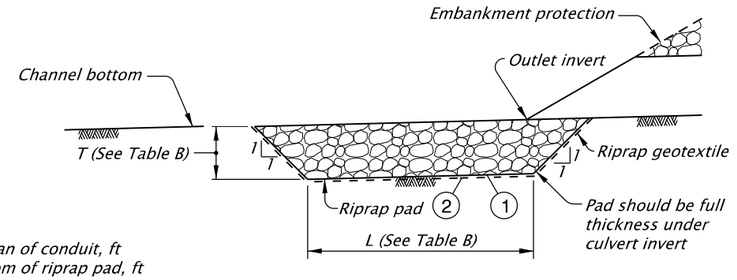


SECTION C-C

HEADWALL AND WINGWALLS

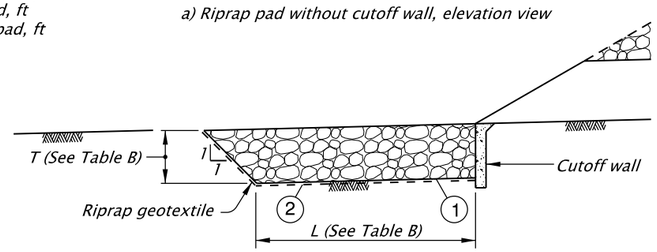
B = Diameter of circular barrel or span of arch pipe, box, or open-bottom arch.
D = Diameter of circular barrel or rise of arch pipe, box, or open-bottom arch.
T = Thickness of riprap blanket, see Table A.

EMBANKMENT PROTECTION



B = Diameter or span of conduit, ft
L = Length of bottom of riprap pad, ft
T = Thickness of riprap pad, ft
W= Width of top of riprap pad, ft

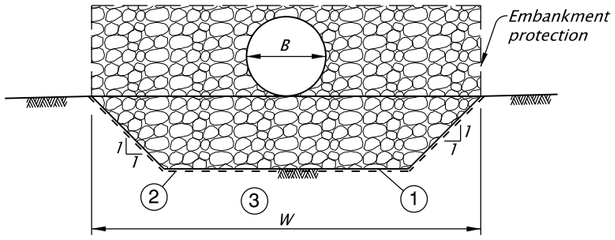
a) Riprap pad without cutoff wall, elevation view



b) Riprap pad with cutoff wall, elevation view

RIPRAP PAD NOTES:

1. *Do not excavate non-erodible rock in order to place riprap.*
2. *Use riprap geotextile under Class 200 and Class 700 loose riprap.*
3. *Top width (W) of the riprap pad is the larger of 5B or the width of the embankment slope protection.*



c) Riprap pad, end view

RIPRAP PADS

TABLE A - Embankment Slope Protection	
Riprap Class	T Distance
50	12 Inches
100	18 Inches
200	24 Inches *
700	36 Inches *

** Riprap geotextile required between riprap and embankment*

TABLE B - Riprap Pad Dimensions		
Riprap Class	L * (ft)	T (ft)
50	4B or 1.3	2.3
100	4B or 1.6	3.3
200	4B or 2.0	4.3
700	4B or 3.3	5.6

** L is the greater of 4B or the listed dimension.*

GENERAL NOTES FOR ALL DETAILS:

1. *See Std. Drg's. RD300 & RD304 for installation details.*
2. *Open ends of pipes normally require a site specific design, and may require special treatment (sloped ends, culvert embankment protection, paved end slopes, safety end sections, or other measures). See special details or Standard Drawings as called for on plans.*

The selection and use of this Standard Drawing, while designed in accordance with generally accepted engineering principles and practices, is the sole responsibility of the user and should not be used without first consulting a Registered Professional Engineer.

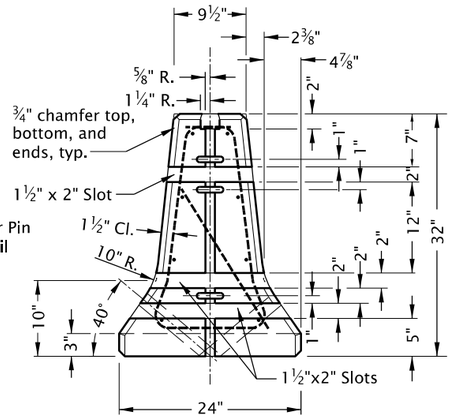
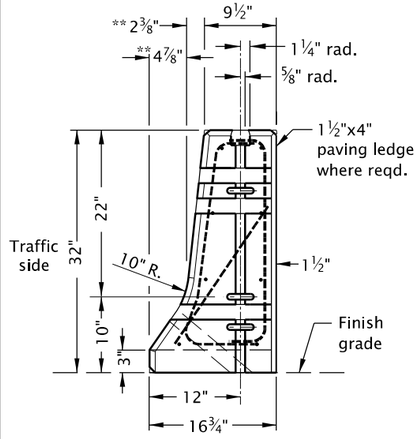
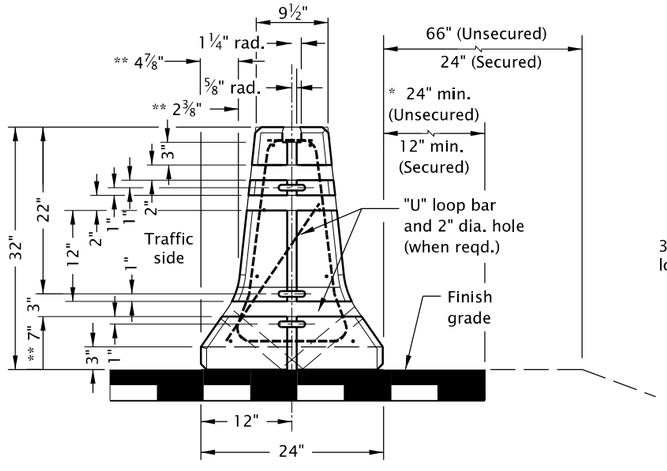
SECTION A-A



SECTION B-B



NARROW BASE
(No pin slots required)

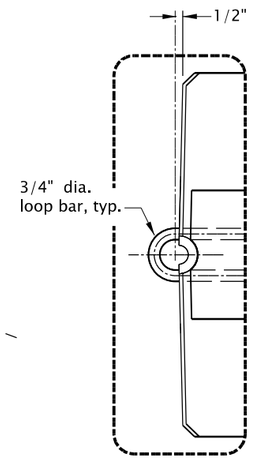


STANDARD

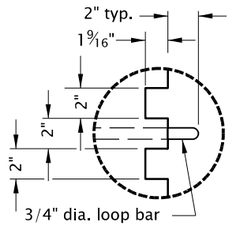
* Barrier used as shoulder barrier and placed in areas where these dimensions cannot be obtained shall be secured to roadway.

** Dimensions marked thus are to the intersection point of the barrier slopes. Construct the 10" radius to provide a smooth transition between the slopes.

SHOULDER BARRIER



BARRIER END DETAIL



BARRIER PIN LOOP DETAIL

GENERAL NOTES FOR ALL DETAILS ON THIS SHEET:

1. *See Std. Dwg. RD501 for details not shown. See Std. Dwg. RD502 for new permanent installations barrier anchoring details (when being anchored). See Std. Dwgs. Rd515 and RD516 for concrete barrier that is maintained for use in temporary installations.*
2. *Maximum chord length for curves with a 1425 foot radius or less shall be 12.5 feet. Maximum chord length for curves with radii exceeding 1425 feet shall be 25 feet.*
3. *Normal use of precast barrier units is restricted to curvatures with radii greater than 770 feet.*
4. *Narrow base shoulder barrier to be used only at locations with backfill behind barrier as shown on plans.*
5. *Temporary concrete barrier to be precast concrete median barrier with pin and loop assembly . See Std. Dwg. RD502.*
6. *Precast concrete barrier used in medians less than 8 feet in width shall be secured to roadway.*
7. *When scuppers are not required, plug them with a minimum 2 inches of grout, as directed.*
8. *All reinforcement shall be full length as shown and shall be 2 inches clear of nearest face of concrete, unless otherwise shown.*
9. *Concrete grout for grouting over pins, pinning holes or grouting of scuppers shall be portland cement grout, weak in strength and of thick consistency, as directed.*
10. *All pins, bolts, dowels, loop bars, and connectors shall be hot-dip galvanized after fabrication.*
11. *For temporary installations, provide a minimum of 18 inches of clear space behind the barrier if secured or 5.5 feet of clear space behind unsecured barrier. Place temporary barrier on smooth, solid surfacing. Maintain smooth, solid surfacing for the clear area behind temporary barrier.*

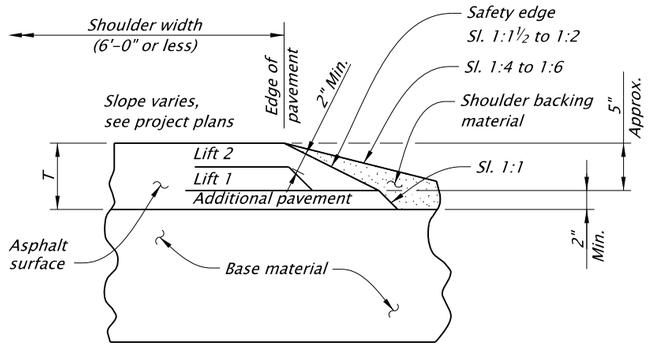
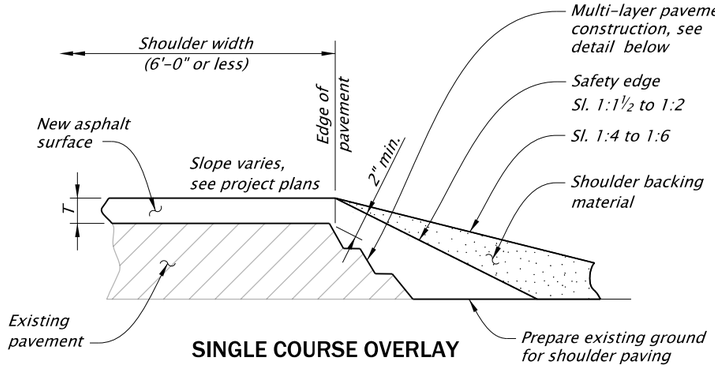
SAFETY EDGE PLACED WITH LIFTS

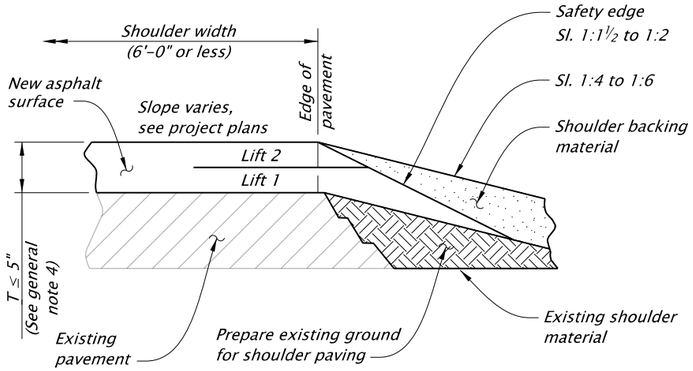


SAFETY EDGE PLACED ONLY WITH FINAL LIFT

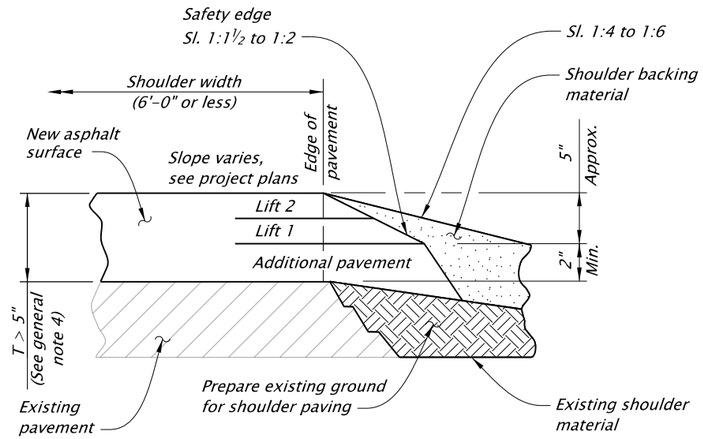
SAFETEY EDGE FOR ASPHALT CONCRETE (NEW CONSTRUCTION)



SINGLE COURSE OVERLAY

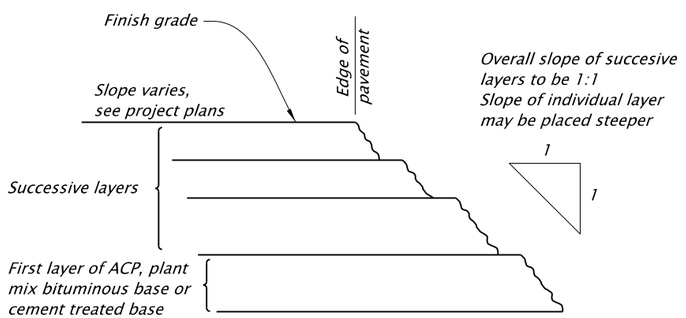


PAVEMENT THICKNESS (T) 5" OR LESS

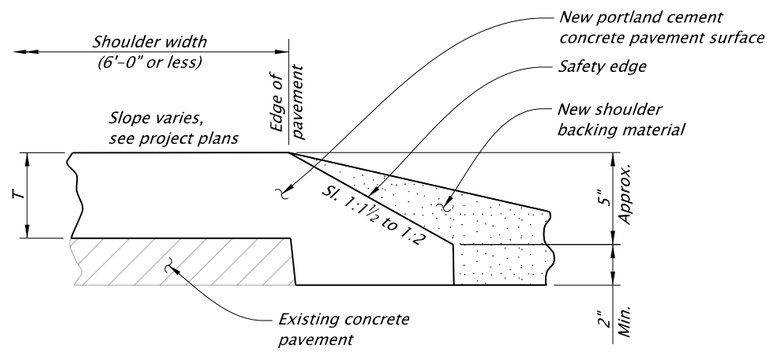


PAVEMENT THICKNESS (T) GREATER THAN 5"

SAFETY EDGE FOR ASPHALT CONCRETE RECONSTRUCTION (INCLUDING MILL, INLAY AND OVERLAY)



MULTI-LAYER PAVEMENT CONSTRUCTION



SAFETY EDGE FOR PORTLAND CEMENT CONCRETE PAVEMENT OVERLAY

GENERAL NOTES FOR ALL DETAILS ON THIS SHEET:

1. *Safety edges are required at the outside edges of the paved roadway (edge of travel lane or edge of paved shoulders), where the wearing surface thickness is 2" or greater, except where indicated in the plans.*
2. *Construct the safety edge at a slope of 1:1½ to 1:2 measured from the pavement surface.*
3. *Do not construct safety edge at intersections, paved drives, or other obstructions.*
4. *For total new asphalt depth of "T"≤5", construct the safety edge to the full thickness of the surface and intermediate courses. For total new asphalt depth of "T" > 5", construct the safety edge to a depth of 5" approximately with a 1:1 sloped face below the safety edge.*

The selection and use of this Standard Drawing, while designed in accordance with generally accepted engineering principles and practices, is the sole responsibility of the user and should not be used without first consulting a Registered Professional Engineer.

All materials shall be in accordance with the current Oregon Standard Specifications.

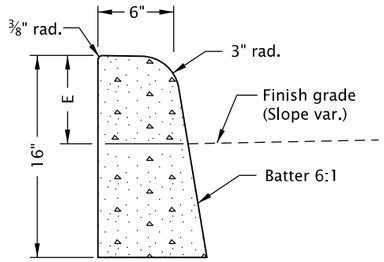
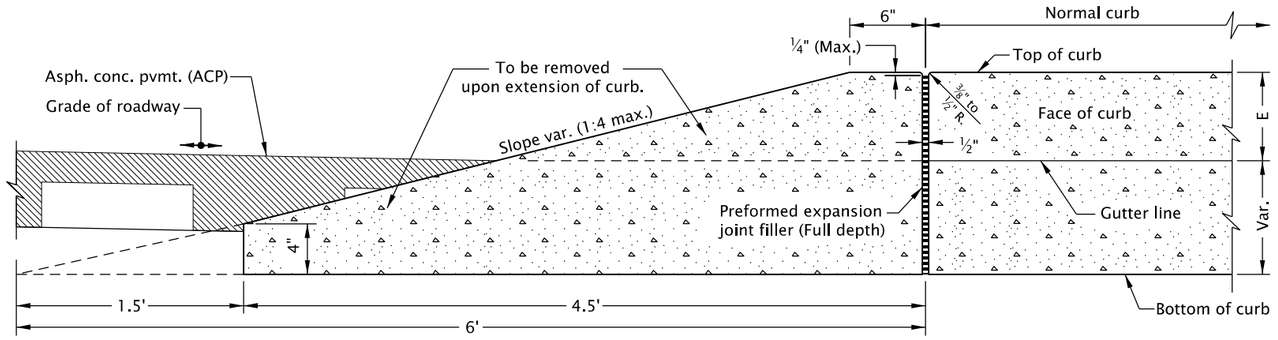
STANDARD CURB

(See general note 11)

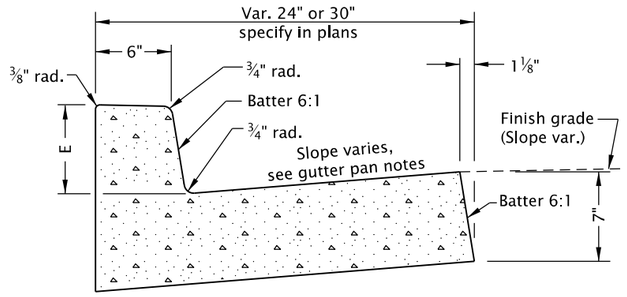


MOUNTABLE CURB

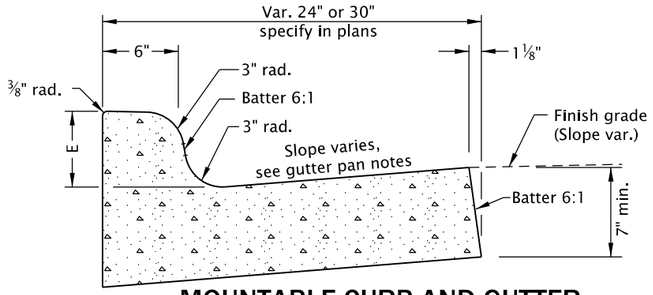
(See general note 11)



CURB ENDING DETAIL



CURB AND GUTTER



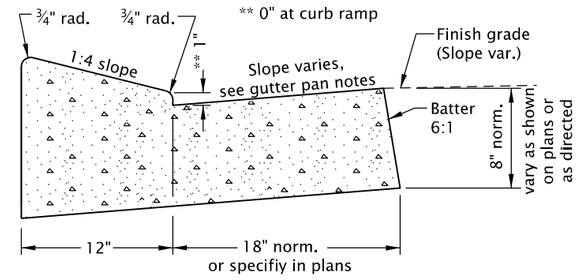
MOUNTABLE CURB AND GUTTER

GUTTER PAN NOTES:

Slope 5.0% normal.

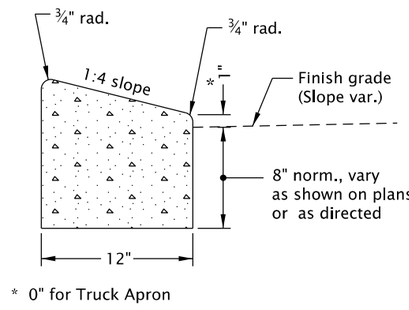
Slope 4.0% max. at curb ramps.

Vary slope as reqd. for drainage. Vary where shown on plans, and allowed by jurisdiction.



LOW PROFILE MOUNTABLE CURB AND GUTTER

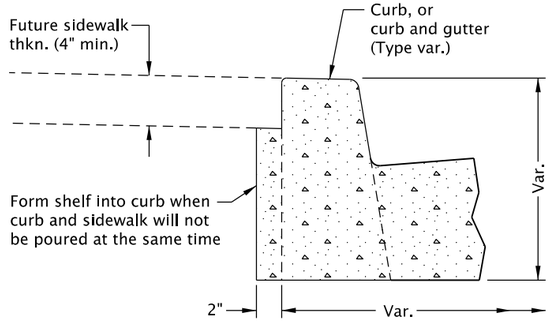
(Where shown on plans)



* 0" for Truck Apron

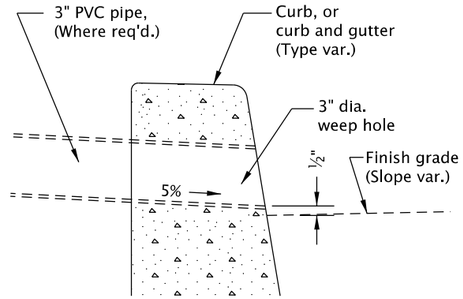
LOW PROFILE MOUNTABLE CURB

(See general note 11)



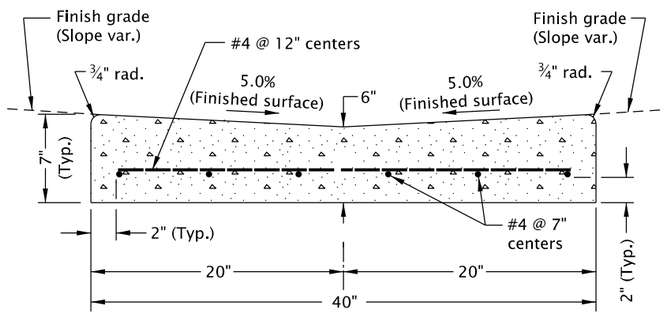
MODIFICATION FOR KEYWAY

(Where shown on plans)



WEEP HOLE DETAIL

(Where shown on plans, and allowed by jurisdiction)



VALLEY GUTTER

GENERAL NOTES FOR ALL DETAILS ON THIS SHEET:

1. Curb exposure "E" = 6" to 9", as measured vertically from flowline to highest point on curb. Vary as shown on plans or as directed. O.D.O.T standard "E"=7".
2. Const. curb expansion joints at 200' maximum spacing, and at points of tangency, and at ends of each driveways.
3. Const. curb contraction joints at 15' maximum spacing, and at ends of each inlet and curb ramp.
4. Transitions shall be used to connect curbs of different exposures "E". ("E" Is the total vertical dimension of those curb surfaces having a slope of 1:1 or steeper). Minimum desirable transition length shall be 20' for each 1" difference in "E".
5. Tops of all curbs shall slope toward the roadway at 1.5% max. (Max. 2.0% finished surface slope), unless otherwise shown, or as directed.
6. Dimensions are nominal, vary to conform with curb machine approved by the engineer.
7. Dimensions adjacent to radii are measured to the point of intersection of curb surfaces.
8. For sidewalk details, and monolithic curb & sidewalk, see Std. Dwgs. RD720 & RD721.
9. For drainage curbs, see Std. Dwg. RD701.
10. For curb ramp details, see Std. Dwgs. RD900 series.
11. On or along state highways, curb and gutter is required at curb ramp.

All materials shall be in accordance with the current Oregon Standard Specifications.

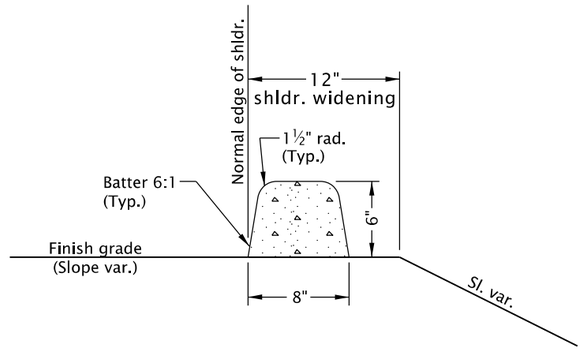
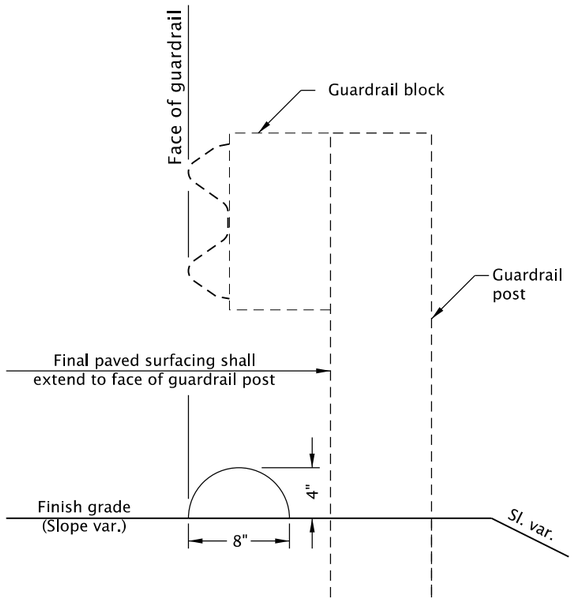
ASPHALT CONCRETE



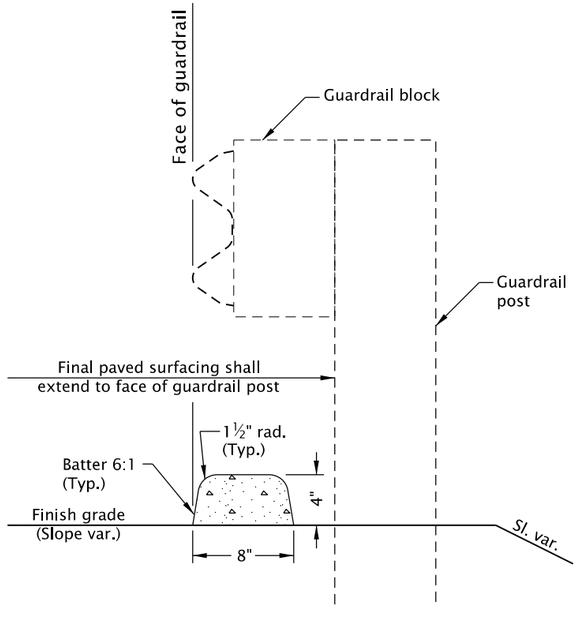
PORTLAND CEMENT CONCRETE

DRAINAGE CURBS

(See general note 4)



ASPHALT CONCRETE



PORTLAND CEMENT CONCRETE

DRAINAGE CURBS UNDER GUARDRAIL

(See general note 4)

GENERAL NOTES FOR ALL DETAILS ON THIS SHEET:

1. For PCC drainage curbs, construct curb expansion joints at 200' maximum spacing, and at points of tangency.
2. For PCC drainage curbs, construct curb contraction joints at 15' maximum spacing.
3. Dimensions are nominal, vary to conform with curb machine approved by the engineer.
4. When bonding to dense graded ACP, apply epoxy cement between surfaces.
5. When drainage curb is required, curb alignment shall be the same as face of guardrail, as shown above. When a run of drainage curb, or any part thereof, is placed under guardrail, curb height shall be 4".
6. For other curb types, see Std. Dwg. RD700.
7. For guardrail details not shown, see Std. Dwg. RD400.

All materials shall be in accordance with the current Oregon Standard Specifications.

CURB INLET PERSPECTIVE VIEW

COMPOST FILTER SOCK OR WATTLE - TYPE 7

NOT TO SCALE

NOTES:
Type 2 - Geotextile/wire mesh/aggregate
Place the wire mesh over the grate.
Place sediment fence geotextile over the wire mesh and perimeter area around structure.
Install aggregate over the geotextile fabric.

Type 3 - Prefabricated filter inserts
Install prefabricated filter inserts according to the plans, special provisions, and manufacturer recommendations.
Prefabricated inserts with provisions for overflow are allowed only when accompanied by additional BMP's to prevent the potential of sediments entering project storm systems.
Field fabricated inserts are not allowed.

Type 7 - Compost filter sock
Drive 2"x2" wood stakes a minimum of 6" into ground and flush with the top of the sock.
Overlap ends of sock per manufacturers recommendations (12"min., 36" max.).
Use 8" to 12" dia sock on curbside in traffic areas.

(Type 7 cont.)
Use 12" to 18" dia sock in non-traffic areas or areas where the larger socks can be used safely.
use synthetic mesh socks for temporary installations.

Type 10 - Curb inlet sediment dam
Fit curb inlet sediment dam snugly into inlet mouth. Curb inlet sediment dam is required for use with inlet filter insert where at-grade inlet grate and curb inlet are combined at a catch basin.

Type 11 - Wattle barrier with filter insert
Install prefabricated filter insert per Type 3 detail.
Install wattles over opening and 36" to each side of opening tight against curb. Adjust wattle to force storm water to flow through filter insert or wattle prior to leaving the site.
Adjust, replace or modify the inlet protection as needed to prevent sediment laden water from entering the catch basin.

The selection and use of this Standard Drawing, while designed in accordance with generally accepted engineering principles and practices, is the sole responsibility of the user and should not be used without first consulting a Registered Professional Engineer.

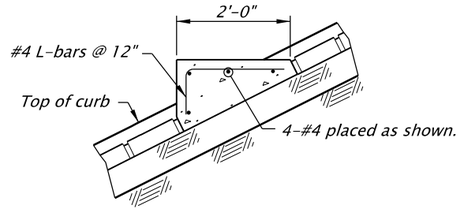
RECESSED MAINTENANCE WALK SECTION



RAISED MAINTENANCE WALK SECTION

GENERAL NOTES

Provide all reinforcing steel according to ASTM Specification A706, or AASHTO M31 (ASTM A615), Grade 60. Use the following splice lengths unless shown otherwise:

Bar Size		#3	#4	#5
Splice Length	Uncoated	1'-0"	1'-4"	1'-8"
	Epoxy Coated	1'-5"	1'-10"	2'-4"

Provide all welded steel wire fabric according to AASHTO M55 (ASTM A185) or AASHTO M221 (ASTM A497). Place all fabric edge laps with no less than one mesh in width.
Place all bars and fabric as shown.
Construct all berm slabs with 3" deep cast-in-place unreinforced concrete.
Provide precast blocks or cast-in-place concrete panels for slope paving.
Use same size blocks at any bridge site.

PRECAST BLOCKS

Blocks may vary in size from 8" to 18" wide (B) by 16" to 36" long (A).
Provide the width to length ratio within the range of B/A = 0.33 to 0.50 with minimum thickness of 3".
Cast or cut odd blocks at job site.
Use hardrock or lightweight concrete. Minimum design strength in 28 days of 1500 psi.

CAST-IN-PLACE BLOCKS

Blocks may vary in size up to a maximum of 3'-0" in length (L) and width (W).
Provide the width to length ratio within the range of W/L = 0.5 to 1.0.
Blocks may be cast-in-place individually, in rows, or all simultaneously.
Each block shall have a full depth construction joint or 1" deep scored joint between each adjacent block or curb.

The selection and use of this Standard Drawing, while designed in accordance with generally accepted engineering principles and practices, is the sole responsibility of the user and should not be used without first consulting a Registered Professional Engineer.

MOUNTING HEIGHT
All Other Signs

General Installation Notes:

a. Signing details shown on this sheet are intended to convey "typical" conditions only. Individual locations may require installation different from those shown.
For guidance regarding unique installations or exceptions call the Project Sign Designer or Region Traffic Section.

b. Locate breakaway supports away from ditches to avoid problems with erosion, corrosion, debris, maintenance and breakaway performance. See Dwg. No. TM635 for more information.

c. For wood post support details see Dwg. No. TM670.

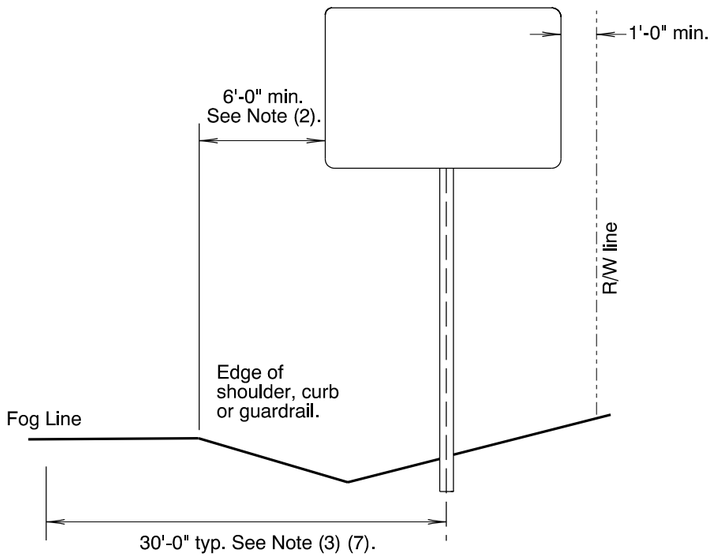
d. For perforated steelsquare tube support details see Dwg. No. TM681.

e. For triangular base breakaway support details see Dwg. No. TM602.

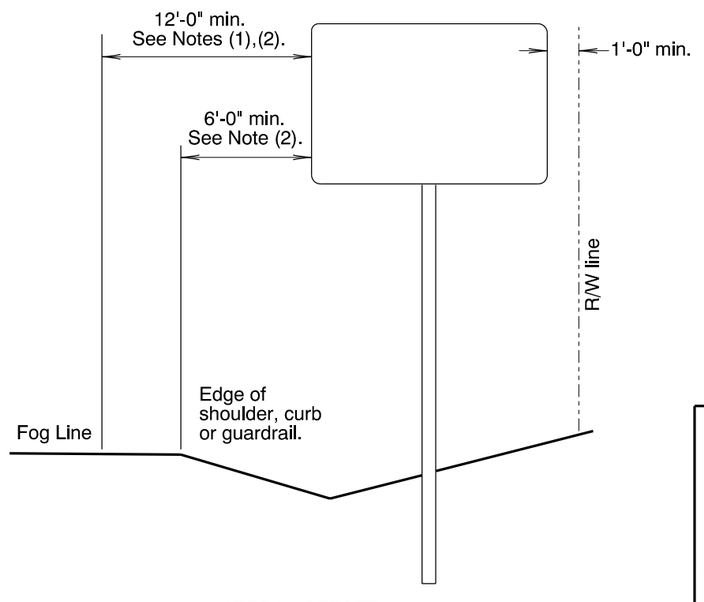
f. For multi-post breakaway support details see Dwg. No. TM600.

g. Mounting heights should not be more than 3 inches more than the minimum heights shown, where practical.

h. 2" vertical spacing between all signs.



LATERAL OFFSET
Guide Signs



LATERAL OFFSET
All Other Signs

Notes:

1). 6' minimum if behind barrier.

2). 2' minimum if restricted R/W.

3). 20' for ramp terminals.

4). 8' minimum if bicycle path underneath.

5). 8' minimum if secondary signs attached.

6). 5' minimum if outside clearzone, in rural areas and no pedestrians underneath.

7). For multi-post installations measure distance from post closest to roadway.

The selection and use of this Standard Drawing, while designed in accordance with generally accepted engineering principles and practices, is the sole responsibility of the user and should not be used without first consulting a Registered Professional Engineer.

(b) PAVEMENT MARKER INSTALLATION FOR BI-DIRECTIONAL RAISED PAVEMENT MARKERS

PAVEMENT MARKER INSTALLATION ON HORIZONTAL CURVES

LEGEND

- Mono-Directional White (marker reflects white to left in this symbol)
- Bi-Directional Yellow (marker reflects yellow to both the left and right in this symbol)
- Increasing stationing from left to right
- Direction of Travel
- Lane line dimensions are shown on the striping plans.

To be accompanied by Standard Dwg. Nos. TM500 thru TM504

The selection and use of this Standard Drawing, while designed in accordance with generally accepted engineering principles and practices, is the sole responsibility of the user and should not be used without first consulting a Registered Professional Engineer.

All materials shall be in accordance with the current Oregon Standard Specifications.

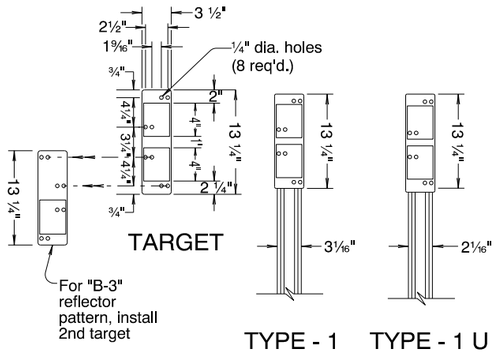
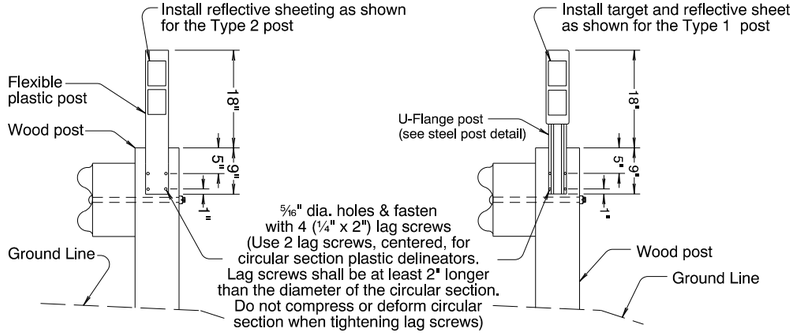
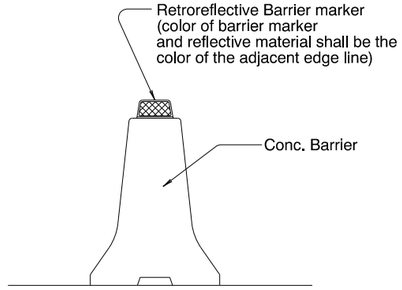
FLEXIBLE PLASTIC POSTS





TYPE - 4



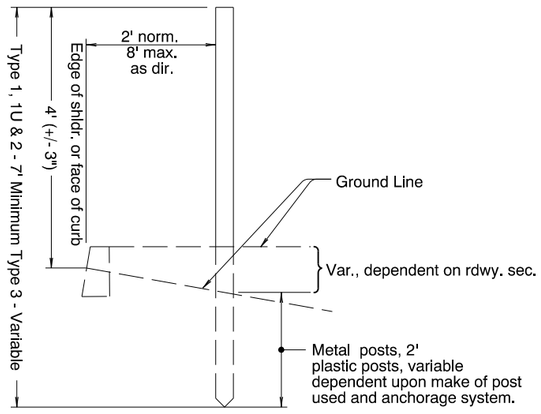
TYPE - 5

STEEL POSTS

GUARDRAIL AREAS (WITH WOOD POSTS)

CONCRETE BARRIER AREAS

(Install barrier markers at 50' spacing unless otherwise noted in plans)



INSTALLATION DETAIL

NOTES:

POST:
Galv. steel, nominal weight Type 1, 2 lb/ft, Type 1 U, 1.12 lb/ft.

See Standard Drawing TM571 for steel post dimensions and details.

TARGET:
Aluminum sheet, nominal thickness .050". Fasten to post with⅜" dia. aluminum blind rivets and washers.

For "B-3" reflector pattern, top target shall overlap bottom target.

REFLECTORS:
3" x 4" reflective sheeting unless otherwise shown.
(3½" x 4" reflective sheeting is an acceptable alternate unless otherwise shown.)
Acrylic prismatic reflectors acceptable on Type 1, 1 U, 2 and 4 posts and Type 5 barrier mounts.
Place required number in sequence from top of target.

GENERAL NOTES:

1. Spacing shall be measured along the shoulder.
2. On roads with less than 500 vehicle ADT, delineators are not to be used except where situations such as sharp horizontal curves, etc. exist.
3. To clear driveways, crossroads etc., or for required adjustments at ramps and at intersections, either:
   (a) vary placement of that post up to 25% of spacing shown, or;
   (b) eliminate said post if limit of variation must be exceeded.
4. Judgement should be exercised in the installation of delineators in cut section, particularly on roads constructed to older standards where ditches are narrow and where delineators tend to hamper maintenance operations.
5. On horizontal curves place delineators nearly opposite each other.
6. At guard rail locations the delineators are to be installed behind the rail and shall be located adjacent to guard rail posts as shown for Type 4 Delineators.
7. Install all delineators with reflectors facing adjacent oncoming traffic.
8. Offset delineators an additional 4' in areas of heavy snow removal operations.
9. Backside Delineators may be used in frequently snow plowed areas where use of snow poles is not justified. When Backside Delineators are specified, substitute "W-1" and "W-2" with "W-1B" and "W-2B" respectively, on Type 1 steel posts. Do not install Backside Delineators on one-way sections of roadway, freeways and ramps, or on radius sections.
10. Refer to TM 222 for bracket assembly details for Backside Reflector Pattern.

TANGENT	HORIZONTAL CURVES				
▲MAX. SPACING EACH SIDE OF ROADWAY IN FEET	▲ MAX. SPACING EACH SIDE OF ROADWAY IN FEET

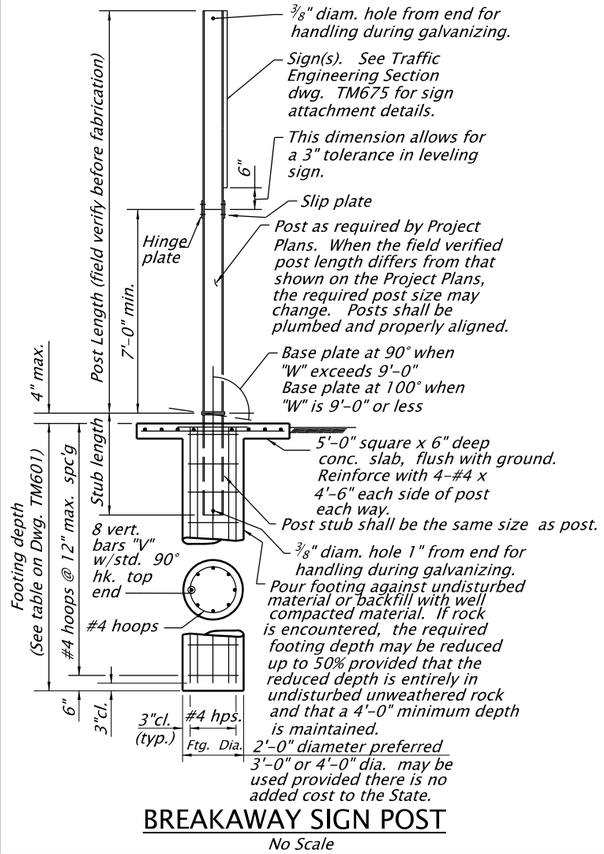
TYPICAL SIGN INSTALLATION

No Scale



BREAKAWAY SIGN POST

No Scale

GENERAL NOTES:

1. Sign supports are designed in accordance with the AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals 1994. Use a wind velocity with a 25-year mean reccurrence interval.
2. All concrete shall be Commercial Grade Concrete (f'c = 3000 psi).
3. All reinforcing steel shall conform to AASHTO Specification M31 (ASTM A615), Grade 60 or A706.
4. The following splice lengths shall be used unless otherwise shown:

Bar Size		3	4	5	6	7	8	9	10	11
Splice Length	Uncoated	1'-0"	1'-4"	1'-8"	2'-0"	2'-8"	3'-6"	4'-4"	5'-7"	6'-9"

5. All structural steel shall conform to ASTM Specification A572, Grade 50 unless shown otherwise.
6. Shims shall be fabricated from brass shim stock conforming to ASTM B36.
7. All bolts shall be high strength bolts conforming to ASTM Specification A325 (AASHTO M164). Nuts for high strength bolts shall be well lubricated heavy hexagon nuts conforming to ASTM Specification A563, (AASHTO M291), Grade DH. Compressible direct tension indicator washers shall conform to ASTM Specification F959. Hardened steel washers shall conform to ASTM Specification F436 (AASHTO M293).
8. Steel sheet for keepers shall conform to ASTM Specification A653.
9. Hinge and base plate holes shall be sub-drilled and reamed to size. Hinge and base plate slots shall be saw cut or machine guided flame cut.
10. Direct tension indicator washers shall be mechanically galvanized to ASTM B695.
11. Keeper plate shall be galvanized in accordance with ASTM A653, Coating G165.
12. All other steel including fasteners shall be hot-dip galvanized after fabrication. Remove galvanizing runs and beads on all slip surfaces. Nuts for high strength bolts may be retapped after galvanizing.
13. The use of a post larger than required by design is not permitted.
14. Tightening of base plate bolts shall be done with a state inspector present.
15. See TM601 for additional details.

BASE PLATE BOLTING PROCEDURE:

1. Assemble post to stub as shown in Base Assembly Detail.
2. Shim as required to plumb post. ($\pm \frac{1}{16}$" / vert. 12") (2 shims maximum per bolt)
3. Tighten bolts in a systematic order to the "T1" torque prescribed in the Base Plate Data Table.
4. Loosen and retighten bolts to the "T2" torque prescribed in the Base Plate Data Table. Use the same order as the intitial tightening and DO NOT OVER TIGHTEN!
5. Burr threads at junction with nut using a center punch.

HINGE AND SLIP PLATE BOLTING PROCEDURE:

1. Shop assemble post sections as shown. (D.T.I. bumps toward bolt head)
2. Tighten each nut in a systematic order until the gap between the bolt head and direct tension indicator washer is in the 0.005" to 0.010" range.
3. Further tighten each nut in the same order until a nil gap between the bolt head and indicator washer is attained.

Accompanied by dwgs. TM220, TM601, TM635, TM675

The selection and use of this Standard Drawing, while designed in accordance with generally accepted engineering principles and practices, is the sole responsibility of the user and should not be used without first consulting a Registered Professional Engineer.

All materials shall be in accordance with the current Oregon Standard Specifications.

GENERAL NOTES:

1. *Sign supports are designed in accordance with the AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals 1994. Use a wind velocity with a 10-year mean reccurrence interval.*
2. *All concrete shall be Commercial Grade Concrete (f'c = 3000 psi)*
3. *All reinforcing steel shall conform to AASHTO Specification M31, Grade 60, or ASTM A706.*
4. *The following splice lengths shall be used unless otherwise shown:*

Bar Size	#4	#5
Splice Length (mm)	1'-1"	1'-5"

5. *Structural steel shall conform to AASHTO M223 (ASTM A572) Grade 50. unless shown otherwise.*
6. *Structural tubing shall conform to ASTM Specification A500,Grade B, or A501.*
7. *Shims shall be fabricated from brass shim stock conforming to ASTM B36.*
8. *All bolts shall be high strength bolts conforming to to ASTM Specification A325 (AASHTO M164). Nuts for high strength bolts shall be well lubricated heavy hexagon nuts conforming to ASTM Specification A563, (AASHTO M291), Grade DH. Hardened steel washers shall conform to ASTM Specification F436 (AASHTO M293).*
9. *Steel sheet for keepers shall conform to ASTM Specification A653.*
10. *Base plate holes shall be sub-drilled and reamed to size. Base plate slot shall be saw cut or machine guided flame cut.*
11. *Keeper sheet metal shall be galvanized in accordance with ASTM A653, Coating G165. All other steel including fasteners shall be hot-dip galvanized after fabrication. Remove galvanizing runs and beads on all slip surfaces. Nuts for high strength bolts may be retapped after galvanizing.*
12. *The use of post larger than required by design will not be permitted.*
13. *See Dwg. TM675 for sign and sign mounting details.*

BASE PLATE BOLTING PRODEDURE:

1. *Assemble post to stub as shown in Base Assembly Detail.*
2. *Shim as required to plumb post. (± 1/16"/vert. 12") (2 shims maximum per bolt)*
3. *Tighten bolts in a systematic order to the "T1" ft-lbs torque.*
4. *Loosen and retighten bolts to the "T2" ft-lbs torque. Use the same order as the intitial tightening and DO NOT OVER TIGHTEN!*
5. *Burr threads at junction with nut using a center punch.*

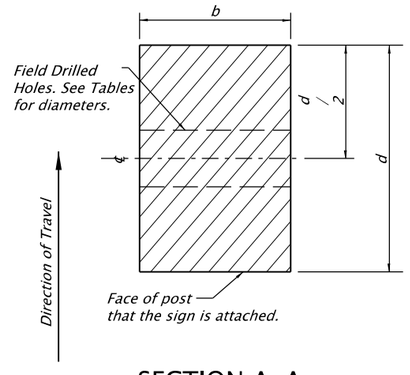
TEMPORARY WOOD POST TABLE **

* - Linear Interpolate X*Y*Z 3 post values for signs greater than 15' and less than 20'.

** - See note 9



SECTION A-A

No scale

General Notes:

1. Wood posts are available in the following commercial lengths: 12', 14', 16', 18', 20', 22', 24', 26'.
2. Material shall be Douglas Fir No. 1 and according to Section 02110.40.
3. For horizontal and vertical clearances of permanent signs refer to TM200 and of temporary signs refer to TM822.
4. Wood post design in accordance with the 5th Edition 2009 AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals.
5. Use the 3 second gust wind speeds shown on TM671 for the site specific sign location.
6. General design parameters are Kz = 0.87, SIF (duration factor) = 1.6, Cd (sign) = 1.20, and G = 1.14.
7. The sign width to sign height or sign height to sign width ratio shall not exceed 5.0.
8. Permanent signing uses an Ir = 0.71 for a recurrence interval of 10 years.
9. Temporary signing uses an Ir = 0.45 for a recurrence interval of 1.5 years.
10. Posts protected by barrier or guardrail do not require field drilled holes.
11. 4" x 4" posts should not be used in snow plow areas.

Post Embedment Installation:

1. Excavate the hole at least 12" larger in diameter than the diagonal dimension of the post. Maintain at least 6" of space around the edges of the post to accomodate compaction equipment.
2. Align the post in the hole to a vertical position.
3. The space around the wood post shall be backfilled to finished ground surface.
4. Backfill with selected general backfill meeting the requirements of 00330.13.
5. Place in layers not greater than 6 inches.
6. Solidly ram and tamp the layers into the excavation area around the post.
7. Dampen during placement if too dry to compact properly.
8. Replace and finish the surface around the post to match the surrounding surface.

Accompanied by dwgs. TM200, TM671, TM822

The selection and use of this Standard Drawing, while designed in accordance with generally accepted engineering principles and practices, is the sole responsibility of the user and should not be used without first consulting a Registered Professional Engineer.

All materials shall be in accordance with the current Oregon Standard Specifications.

NOTES:

1. *The wind velocity map as shown is adapted from AASHTO 2001 4th Edition - "Standard Specifications for Structural Supports for Highway Signs, Luminaires and Traffic Signals", Appendix C, Figure C-3 and Section 3, Figure 3-2. It uses the wind speed map shown in Figure 1609 of the 2007 Oregon Structural Code to account for locations in the State with special wind regions.*
2. *The wind velocities shown above are 3-Second Gust wind velocities.*
3. *The Exposure Catagory is C.*
4. *The mean recurrence interval is 50-Years.*
5. *Mountanious terrain, gorges, and ocean promontories are classified as special wind regions and shall be examined for unusual wind conditions.*
6. *The Interval Height (Kz) is 30 ft.*
7. *All areas with full exposure to ocean winds shall be designated 110 mph areas.*
8. *Areas in Multnomah and Hood River counties with full exposure to Columbia River Gorge winds shall be designated 110 mph areas.*
9. *Localities may have adopted wind speed higher that shown on this map. Those higher wind speed shall be used.*

The selection and use of this Standard Drawing, while designed in accordance with generally accepted engineering principles and practices, is the sole responsibility of the user and should not be used without first consulting a Registered Professional Engineer.

All materials shall be in accordance with the current Oregon Standard Specifications.

GENERAL NOTES:

1. Perforated Steel Square Supports are designed in accordance with the AASHTO Standard Specifications for Structural Supports for Highway Signs, Luminaires, and Traffic Signals 4th Edition, 2001, 2002, 2003, and 2006 interim revisions.
2. The design basic wind speed (3 second gust) shall be according to the wind map shown on TM671.
3. Material grade for base hardware connection shall be according to the manufacturer's recommendation and based on crash testing.
4. Use $^{7}/_{16}$" diameter holes at 1" spacing on each of the 4 sides.
5. Steel post shall have a minimum yield stress of 50 ksi.
6. Steel shall be galvanized according to ASTM A653 with coating designation G90.
7. General design parameters are Kz = 0.87, Cd (sign) = 1.20, and G = 1.14.
8. Permanent signing uses an Ir = 0.71 for a recurrence interval of 10 years.
9. Temporary signing uses an Ir = 0.45 for a recurrence interval of 1.5 years.
10. The sign width to sign height or sign height to sign width ratio shall not exceed 5.0.
11. For horizontal and vertical clearances of permanent signs refer to TM200 and of temporary signs refer to TM822.
12. Posts protected by barrier or guardrail do not require slip bases.

TAPER TYPES & FORMULAS	
TAPER	FORMULA
Merging (Lane Closure)	"L"
Shifting	"L"/2 or ½"L"
Shoulder Closure	"L"/3 or ⅓"L"
Flagging (See Drg. TM850)	50' – 100'
Downstream (Termination)	Varies (See Drawings)

★ Use Pre-Construction Posted Speed to select the Speed from the Tables below:

TEMPORARY BARRIER FLARE RATE TABLE	
★SPEED (mph)	MINIMUM FLARE RATE
≤ 30	8:1
35	9:1
40	10:1
45	12:1
50	14:1
55	16:1
60	18:1
65	19:1
70	20:1

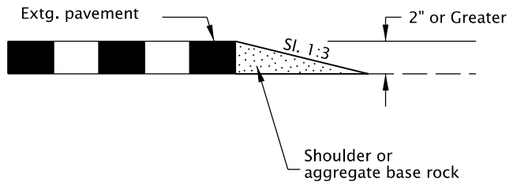
MINIMUM LENGTHS TABLE					
"L" VALUE FOR TAPERS (ft)					BUFFER "B" (ft)
★ SPEED (mph)	W = Lane or Shoulder Width being closed or shifted				
	W ≤ 10	W = 12	W = 14	W = 16	
25	105	125	145	165	75
30	150	180	210	240	100
35	205	245	285	325	125
40	265	320	375	430	150
45	450	540	630	720	180
50	500	600	700	800	210
55	550	660	770	880	250
60	600	720	840	960	285
65	650	780	910	1000	325
70	700	840	980	1000	365
FREEWAYS					
55	1000	1000	1000	1000	250
60	1000	1000	1000	1000	285
65	1000	1000	1000	1000	325
70	1000	1000	1000	1000	365

NOTES:
- For Lane closures where W < 10', use "L" value for W = 10'.
- For Shoulder closures where W < 10', use "L" value for W = 10' or calculate "L" using formula, for Speeds ≥ 45: L = WS, Speeds < 45: L = $S^2W/60$, S = Speed, W=Width

TRAFFIC CONTROL DEVICES (TCD) SPACING TABLE				
★ SPEED (mph)	Sign Spacing (ft)			Max. Channelizing Device Spacing (ft)
	A	B	C	
20 – 30	100	100	100	20
35 – 40	350	350	350	20
45 – 55	500	500	500	40
60 – 70	700	700	700	40
Freeway	1000	1500	2640	40

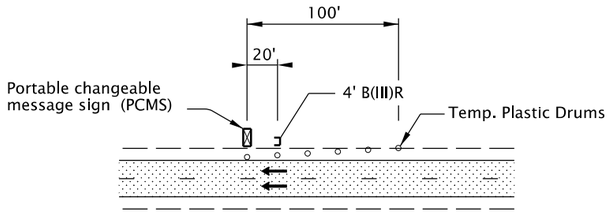
NOTES:
- Place traffic control devices on 10 ft. spacing for intersection and access radii.
- When necessary, sign spacing may be adjusted to fit site conditions. Limit spacing adjustments to 30% of the "A" dimension for all speeds.

NOTES:
- When paved shoulders adjacent to excavations are less than four feet wide protect longitudinal abrupt edge as shown.
- Use aggregate wedge when abrupt edge is 2 inches or greater.



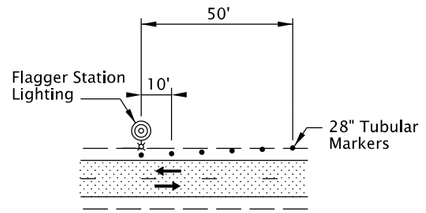
EXCAVATION ABRUPT EDGE

NOTES:
- Install PCMS beyond the outside shoulder, when possible.
- Use the appropriate type of barricade panels for PCMS location. Right shoulder, use Type B(III)R Left shoulder, use Type B(III)L
- Use six drums in shoulder taper on 20' spacing. The drums and barricade may be omitted when PCMS is placed behind a roadside barrier.
- Detail as shown is used for trailered and non-crashworthy components of:
  - Portable Traffic Signals
  - Smart Work Zone Systems



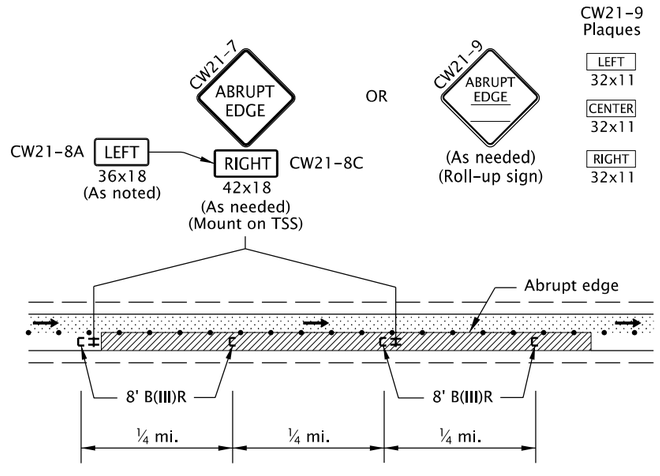
PORTABLE CHANGEABLE MESSAGE SIGN (PCMS) INSTALLATION

NOTES:
- Install Flagger Station Lighting beyond the outside shoulder, where practical.
- Use six tubular markers in shoulder taper on 10' spacing.
- Place cart / generator / power supply off of the shoulder, as far as practical.



FLAGGER STATION LIGHTING DELINEATION

NOTES:
- Abrupt edges may be created by paving, operations, excavations or other roadway work. Use abrupt edge signing for longitudinal abrupt edges of 1 inch or greater.
- If the excavation is located on left side of traffic, replace the 8' B(III)R barricades with 8' B(III)L barricades and replace the "RIGHT" (CW21-8C) riders with "LEFT" (CW21-8A) riders.
- Continue signing and other traffic control devices throughout excavation area at spacings shown.
- If roll-up signs are used, attach the correct (CW21-9) plaques to the sign face using hook and loop fasteners. Place roll-up signs in advance of barricades.



TYPICAL ABRUPT EDGE DELINEATION

GENERAL NOTES FOR ALL TCP DRAWINGS:
- Signs and other Traffic Control Devices (TCD) shown are the minimum required.
- Place a barricade approx. 20' ahead of all sequential arrow boards.
- Arrows shown in roadway are directional arrows to indicate traffic movements.
- All signs are 48" x 48" unless otherwise shown. Use fluorescent orange sheeting for the background of all temporary warning signs.
- All diamond shaped warning signs mounted on barrier sign supports shall be 36" by 36". All other signs mounted on barrier sign supports shall not exceed 12 sq. ft. in total sign area.
- Low speed highways have a pre-construction posted speed of 40 mph or less. High speed highways have a pre-construction posted speed of 45 mph or higher.
- Do not locate sign supports in locations designated for bicycle or pedestrian traffic.
- Combine drawing details to complete temporary traffic control for each work activity.
- Coordinate and control pedestrian movements through a Temporary Accessible Route using Flaggers, Traffic Control Measures, or as directed.
- To be accompanied by Dwg. Nos. TM820 & TM821.

○ ○ ○ Temp. Plastic Drums See TCD Spacing Table for max. spacing.

• • • 28" Tubular Markers See TCD Spacing Table for max. spacing.

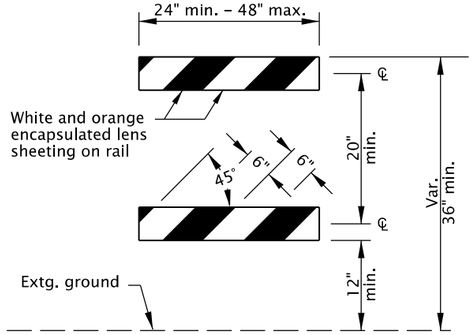
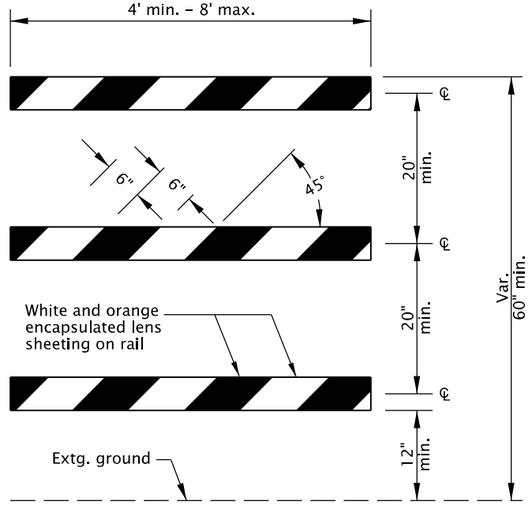
TYPE I



TYPE II



TYPE III

BARRICADE RAIL LAYOUT

GENERAL NOTES FOR ALL DETAILS:

- Sandbags (approximately 25 lb sack filled with sand) may be placed on lower frame to provide additional ballast.
- Ballast shall not extend above bottom rail or be suspended from barricade.
- For rails less than 36" long, 4" wide stripes shall be used.
- Rails must be 8" min. to 12" max. in height.
- Use barricades from ODOT Qualified Products List (QPL).
- Use 4' Type III barricades where horizontal space is limited.
- Do not block bike lanes or shoulders unless the facility is properly closed and signed.
- Do not place barricades in sidewalks unless sidewalk is closed and a temporary pedestrian accessible route (TPAR) is signed according to the TCP. See Dwg. No. TM844.

NOTES:

- Markings for barricade rails shall slope downward at an angle of 45° in the direction traffic is to pass.
- Where a barricade extends entirely across a roadway, it is desirable that the stripes slope downward in the direction toward which traffic must turn in detouring.
- Where both right and left turns are provided for, slope the chevron striping downward in both directions from the center of the barricade.
- For full roadway closures, the C or LR barricade may be used. Extend barricades completely across roadway unless access is required for local road users.

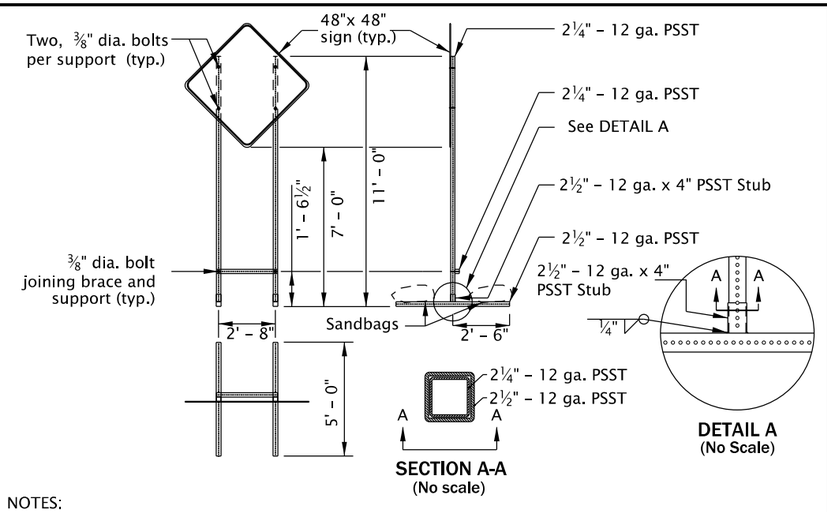
NOTES:

- Use Double Post TSS for a total sign area of 20 sq. ft. or less.

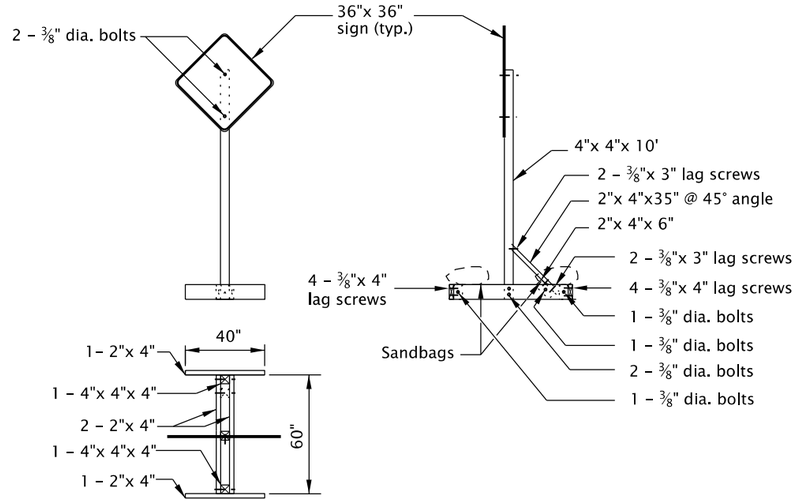
DOUBLE POST DETAIL



NOTES:

- Use PSST TSS's for a total sign area of 16 sq. ft. or less.
- All members shall have a minimum yield stress of 50 ksi.
- Galvanize steel according to ASTM A653 with coating designation G90. Remove Galvanizing from steel before welding. Repair Galvanizing according to ASTM A780.
- Use A325 Bolts or equivalent.
- 2¼" - 12 ga. PSST to extend entire length inside of the 2½" - 12 ga. x 4" PSST Stub.
- Do not use bolt to secure 2¼" PSST inside of the 2½" - 12 ga. x 4" PSST Stub.
- Weld steel according to American Welding Society (AWS) D.1.1.

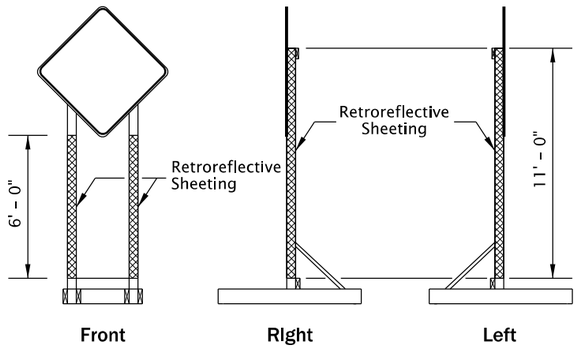
PERFORATED STEEL SQUARE TUBE (PSST) DETAIL



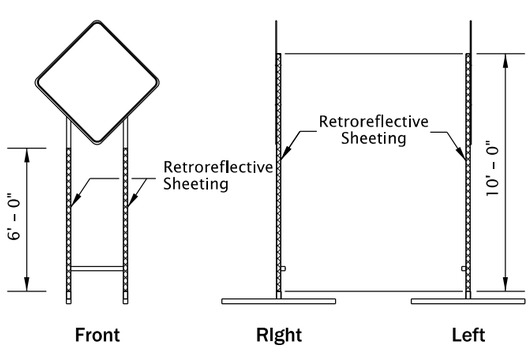
NOTES:

- Use Single Post TSS for a total sign area of 12 sq. ft. or less.
- Use Single Post TSS for mounting "Business Access" (CG20-11) signs. Do not mount signs on Type II or III Barricades.

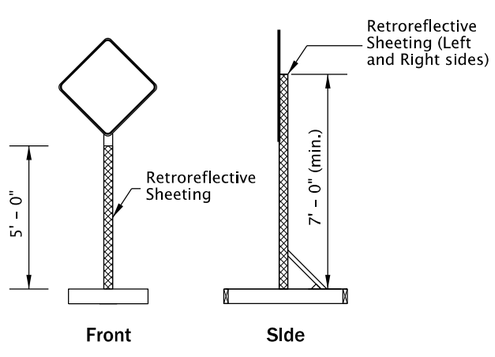
SINGLE POST DETAIL



Double Post



Perforated Steel Square Tube (PSST)



Single Post

TEMPORARY SIGN SUPPORT GENERAL NOTES:

- Do not tip over TSS at any time.
- Do not locate TSS's in locations that block pedestrian or bicycle traffic.
- For wooden TSS's, use either Douglas Fir or Hem Fir, which is surfaced four sides (S4S) and free of heart center (FOHC).
- See "Temporary Sign Placement" detail on TM822 for sign installation heights.
- Do not place or stack ballast more than 24" above the ground.
- When not in use, locate TSS as far from Public Traffic as practicable and turn away from traffic, or cover the sign. Do not cover reflective sheeting on the TSS posts.
- Place a minimum of 50 lbs of sandbags on each of the four TSS supports legs. (25 lb. max per bag) (min. 100 lbs per side of each TSS).
- See Dwg. No. TM204 for flag board mounting detail.

NOTES:

- Apply fluorescent orange, ANSI Type VIII or IX retroreflective sheeting to TSS posts, as shown, for all temporary signs, except "STOP" and "DO NOT ENTER". For "STOP" and "DO NOT ENTER" signs, used red ANSI Type III or IV retroreflective sheeting on the TSS posts.
- Apply sign post retroreflectivity to each TSS post facing front; and to the left and right sides of the TSS, as shown. Use 3" wide sheeting for wood post TSS's. Use 2" wide sheeting for PSST TSS's.
- Sheeting may be applied directly to post material; or applied to a rigid, lightweight substrate, then securely attached to the posts.

SIGN POST REFLECTIVE SHEETING PLACEMENT

The selection and use of this Standard Drawing, while designed in accordance with generally accepted engineering principles and practices, is the sole responsibility of the user and should not be used without first consulting a Registered Professional Engineer.

All materials shall be in accordance with the current Oregon Standard Specifications.

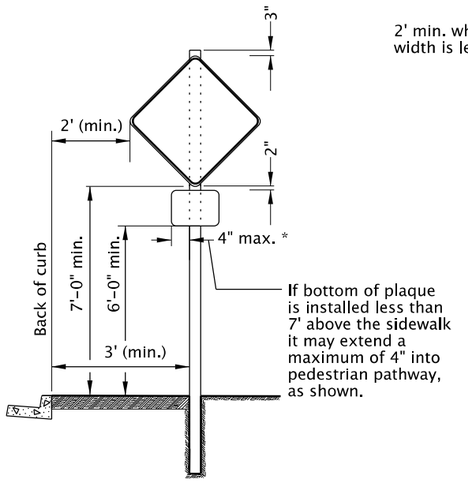
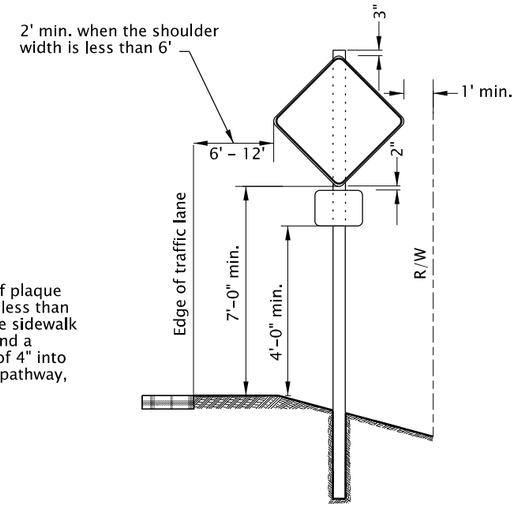
NOTES:

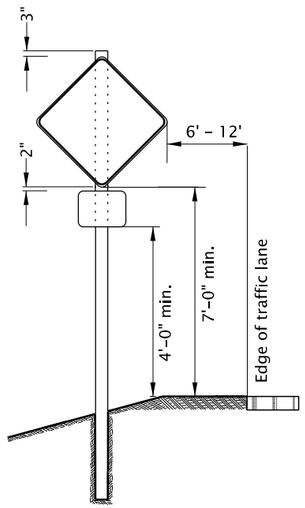
- Do not block bicycle lanes, sidewalks, or TPAR's with sign supports. Maintain minimum widths for these facilities according TCP Design Manual, MUTCD, ADA, or as directed.
- To be accompanied by Dwg. Nos. TM670, TM671, TM687, TM688 & TM689.



Urban Areas With Curb/Sidewalk

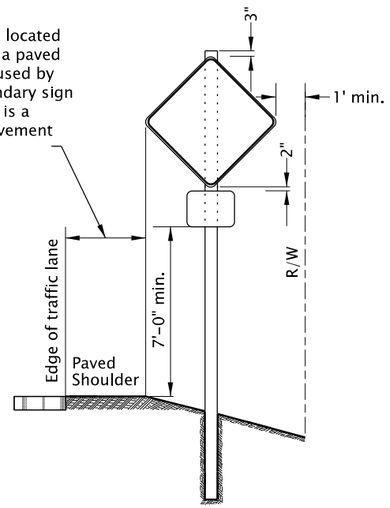


Rural Areas



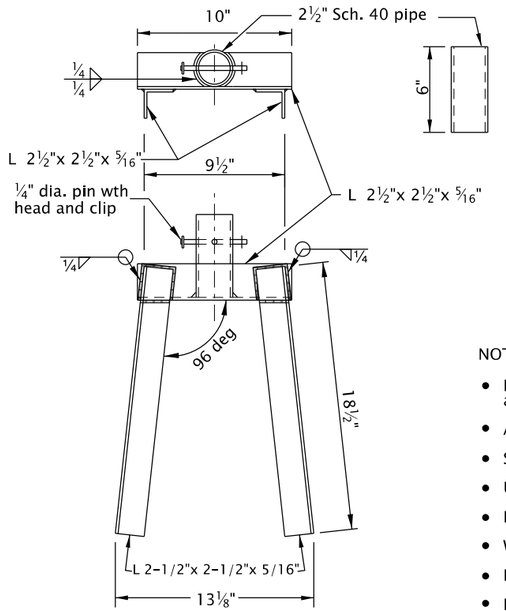
**Divided Highway/Freeway Medians
No Curb/Sidewalk**

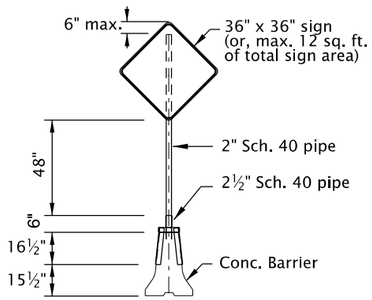
Where temporary signs are located adjacent to or intrude into a paved shoulder or other surface used by bicycle traffic, install secondary sign (plaque) so bottom of sign is a minimum of 7'0" above pavement surface, as shown.



**Rural or Urban Areas - Curb or No Curb
Bicycles On Shoulder**

TEMPORARY SIGN PLACEMENT





NOTES:

- Drill additional holes so sign can be rotated 90 degrees and pinned when not in use.
- All structural steel shall conform to ASTM A36.
- Support fits both 32" and 42" tall "F" barrier.
- Use for supporting a maximum 12 sq. ft. of total sign area.
- Place support at connection between two concrete barrier sections.
- Weld steel according to American Welding Society (AWS) D.1.1.
- Do not use clipped signs.
- Follow manufacturer recommendation when installing signs on barrier other than concrete.

CONCRETE BARRIER SIGN SUPPORT

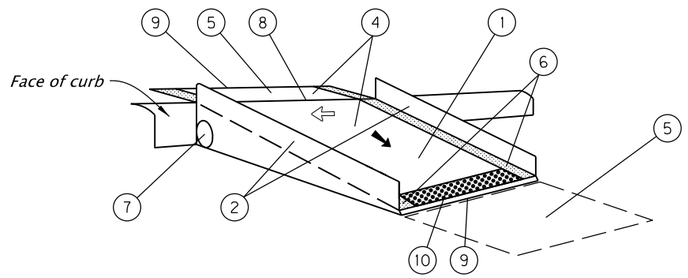
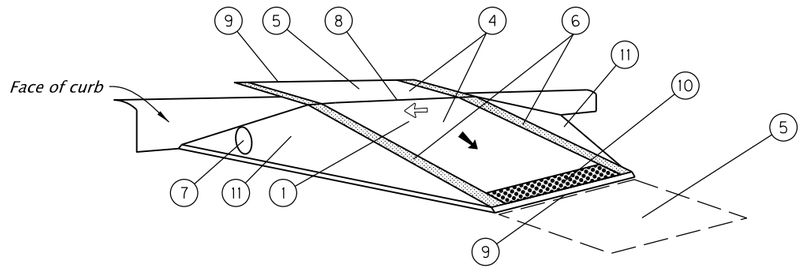
TEMPORARY CURB RAMP, PARALLEL TO CURB



WITH PROTECTIVE EDGE



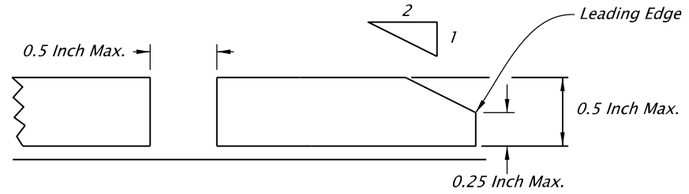
WITH SIDE FLARES

TEMPORARY CURB RAMP, PERPENDICULAR TO CURB

GENERAL CONSTRUCTION NOTES:

1. *Clear width shall be greater than or equal to 48 inches. The curb ramp surface shall be firm, stable and slip-resistant. The ramp surface shall have a 8.3% max. finished surface slope.*
2. *Detectable edging with a min. 6 inch height shall be placed along the ramp run when there is a vertical drop exceeding 6 inches or is adjacent to a slope exceeding 1:3 (v:h).*
3. *Detectable edging with 6 inch min. height and contrasting color shall be placed on all turning spaces where the walkway changes direction.*
4. *Curb ramps and turning spaces shall have a 2.0% max. finished cross slope.*
5. *Clear space of 48 inch x 48 inch or greater shall be provided above and below the curb ramp.*
6. *The curb ramp walkway edge shall be marked with a contrasting color, 4 inch wide stripe. The marking is optional where contrasting detectable edging is used.*
7. *Provide an approved means to prevent water from accumulating at the bottom of the ramp, or overflowing onto the ramp surface.*
8. *Lateral joints or gaps between surfaces shall be less than 0.5 inch wide. Surface slopes that meet at grade break shall be flush. See edge treatment detail.*
9. *Changes between surface heights shall not exceed 0.5 inch. Lateral edges should be vertical up to 0.25 inch high, and beveled at 1:2 (v:h) between 0.25 inch and 0.5 inch height. See edge treatment detail.*
10. *Install a min. 2 ft wide detectable warning surface at pedestrian street crossings. Omit detectable warning surfaces at end of sidewalk transitions that are not at a crosswalk.*
11. *Side flares where provided shall have 10% max. slope.*
12. *The curb ramp surface shall be capable of supporting a min. surface load of approximately 800 pounds.*
13. *The curb ramp shall be either self-balasting or include an anchoring system capable of keeping the platform stationary under pedestrians traffic including motorized wheelchairs.*
14. *The curb ramp platform shall be free of sharp or rough edges or abrasive elements that may harm pedestrians.*

Max. 8.3% surface slope | *Max. 2.0% surface slope* | *Detectable warning surface*



EDGE TREATMENT DETAIL

The selection and use of this Standard Drawing, while designed in accordance with generally accepted engineering principles and practices, is the sole responsibility of the user and should not be used without first consulting a Registered Professional Engineer.

All materials shall be in accordance with the current Oregon Standard Specifications.
