EXECUTIVE SUMMARY

Incentives for better services

This report lays out the progress of Oregon’s coordinated care organizations (CCOs) on quality measures in 2014. This is the sixth such report since coordinated care organizations were launched in 2012. In addition, this is the second report to show a full calendar year of data, as well as results from the second year of Oregon’s pay for performance program.

New to this report are results from the three clinical quality measures. The three clinical quality measures include control of diabetes, control of high blood pressure, and depression screenings. CCOs are beginning to build their capacity to report on these measures from electronic health records and the 2014 results are promising.

Under Oregon’s pay for performance program, the Oregon Health Authority held back three percent of the monthly payments to CCOs, which were put into a common ‘quality pool’. To earn their full incentive payment, CCOs had to meet benchmarks or improvement targets on at least 12 of the 17 incentive measures and have at least 60 percent of their members enrolled in a patient-centered primary care home.

All CCOs showed improvements in some number of measures and 13 out of 16 CCOs earned 100 percent of their quality pool payments in 2014. Overall, and for the second straight calendar year, the coordinated care model continues to show improvements in a number of areas of care, even with the inclusion of the more than 434,000 additional Oregonians who have enrolled in the Oregon Health Plan since January 1, 2014. New rules took effect Jan. 1 opening the Oregon Health Plan to more low-income adults as allowed under the Affordable Care Act (ACA). Today, approximately 1.1 million Oregonians are enrolled in OHP.

With the significant increase in new Oregon Health Plan members since January 1, this report includes a special section on these 2014 enrollees. This section highlights emergency department usage of those who newly enrolled in 2014 compared to those who were enrolled in the Oregon Health Plan prior to January 1, 2014, and compared to those who had been enrolled in the Oregon Health Plan in recent years. Statewide, newly enrolled members with no prior Medicaid experience, use emergency rooms less frequently than other members with prior Medicaid experience. Newly enrolled members with no prior Medicaid experience also have fewer avoidable emergency room visits than other members.

Other improvements include continued reductions in emergency department visits and hospital readmissions, increases in developmental screening, and increases in screening for alcohol and other substance use.

These improvements are attributable to positive changes toward better care coordination and integration of services. For example, to increase developmental screening rates, many CCOs implemented a number of best practices such as provider training, alternate payment methodologies, policy or clinical guideline changes and working with early learning hubs to promote and incentivize screenings within the community.
The coordinated care model continues to show large improvements in the following areas for the state’s Oregon Health Plan members.

- Decreased emergency department visits. Emergency department (ED) rates for people served by CCOs have decreased 22 percent since 2011 baseline data. While some of the improvements seen may be due to national trends, CCOs have implemented a number of best practices for reducing emergency department utilization rates, such as the use of emergency department navigators. One such program now includes referrals to a patient-centered primary care home for members who do not have a primary care provider, as well as referrals to dental services, drug and alcohol services, and intensive management for members that have had 3 or more ED visits in the last 6 months.

- Decreased hospital admissions for short-term complications from diabetes. The rate of adult members (ages 18 and older) with diabetes who had a hospital stay because of a short-term problem from their disease dropped by 26.9 percent since 2011 baseline data.

- Decreased rate of hospital admissions for chronic obstructive pulmonary disease. The rate of adult members (ages 40 and older) who had a hospital stay because of chronic obstructive pulmonary disease or asthma decreased by 60 percent since 2011 baseline data.

- Patient-centered primary care home (PCPCH) enrollment continues to increase. Coordinated care organizations continue to increase the proportion of members enrolled in a patient-centered primary care home: indicating continued momentum even with the new members added since January 1, 2014. PCPCH enrollment has increased 56 percent since 2011 baseline data. Additionally, primary care costs continue to increase, which means more health care services are happening within primary care rather than other settings such as emergency departments.

- Strong improvement to the Screening, Brief Intervention, and Referral to Treatment (SBIRT) measure. This measures the percentage of adult patients (ages 18 and older) who had appropriate screening and intervention for alcohol or other substance abuse. Two coordinated care organization have exceeded the benchmark, a great accomplishment given the statewide baseline of almost zero. Initiation of alcohol and drug treatment has also increased. However, engagement of treatment has held steady, indicating room for improvement.

Other measures in this report that highlight room for improvement include cervical cancer and chlamydia screenings for women. The reduction in these screening rates may be due to changes in national guidelines reported in 2012, which recommended women wait 3 to 5 years between Pap tests and do not have their first Pap test until age 21.

Finally, financial data indicate coordinated care organizations are continuing to hold down costs. Oregon is staying within the budget that meets its commitment to the Centers for Medicare and Medicaid Services to reduce the growth in spending by two percentage points per member, per year.

Oregon is continuing its efforts to transform the health delivery system. By measuring our progress, sharing it publicly and learning from our successes and challenges, we can see clearly where we started, where we are, and where we need to go next.
2014 CCO PERFORMANCE AND QUALITY POOL DISTRIBUTION

2014 Quality Pool
The Oregon Health Authority has established the quality pool, Oregon’s incentive payments to coordinated care organizations. Each CCO is being paid for reaching benchmarks or making improvements on incentive measures. This is the second time Oregon has paid CCOs for better care, rather than just the volume of services delivered.

The 2014 quality pool is $128 million. This represents three percent of the total amount all CCOs were paid in 2014. The quality pool is divided amongst all CCOs, based on their size (number of members) and their performance on the 17 incentive metrics.

Quality Pool: Phase One Distribution
CCOs could earn 100 percent of their quality pool in the first phase of distribution by:

- Meeting the benchmark or improvement target on 12 of 16 measures; and
- Meeting the benchmark or improvement target for the Electronic Health Record adoption measure (as one of the 12 measures above); and
- Scoring at least 60% on the PCPCH enrollment measure.

CCOs must meet all three of these conditions to earn 100 percent of their quality pool.

Challenge Pool: Phase Two Distribution
The challenge pool includes funds remaining after quality pool funds are distributed in phase one. The 2014 challenge pool is $5.2 million. Challenge pool funds were distributed to CCOs that met the benchmark or improvement target on four measures.

- Alcohol and drug misuse (SBIRT)
- Diabetes HbA1c poor control
- Depression screening and follow-up plan
- PCPCH enrollment

Through the challenge pool, some CCOs earned more than 100 percent of their maximum quality pool funds. The next pages show the percentage and dollar amounts earned by each CCO.

The 17 incentive measures were chosen in an open and public process by the Metrics and Scoring Committee and approved by the Centers for Medicare and Medicaid Services (CMS) as part of Oregon’s 1115 demonstration waiver. Challenge pool measures are marked with an asterisk below.

- Access to care (CAHPS)
- Adolescent well-care visits
- Alcohol and other substance misuse screening (SBIRT)*
- Ambulatory care: emergency department utilization
- Colorectal cancer screening
- Controlling hypertension
- Depression screening and follow-up plan*
- Developmental screenings in the first 36 months of life
- Diabetes HbA1c poor control*
- Early elective delivery
- Electronic health record (EHR) adoption
- Follow-up after hospitalization for mental illness
- Follow-up for children prescribed IDHD medication (initiation phase)
- Mental and physical health assessments for children in DHS custody
- Patient-centered primary care home (PCPCH) enrollment
- Prenatal and postpartum care. timeliness of prenatal care
- Satisfaction with care (CAHPS)

Additional information about these measures can be found online at [www.oregon.gov/oha/analytics/Pages/CCO-Baseline-Data.aspx](http://www.oregon.gov/oha/analytics/Pages/CCO-Baseline-Data.aspx)

Information about the Metrics and Scoring Committee can be found online at [www.oregon.gov/oha/analytics/Pages/Metrics-Scoring-Committee.aspx](http://www.oregon.gov/oha/analytics/Pages/Metrics-Scoring-Committee.aspx)
HOW TO READ THESE DATA

Race/ethnicity and CCO data are listed “2013” to “2014.”

For example,

**Yamhill CCO:** 55.0% to 72.5%

Means that Yamhill CCO’s performance on this metric was 55.0% in 2013, and 72.5% in 2014.

Furthermore, categories are sorted by amount of change between 2013 and 2014. That is, CCOs (or racial and ethnic groups) with the *most improvement* are listed first.
ACCESS TO CARE (CAHPS)

About this measure

**Measure description:** Percentage of members (adults and children) who thought they received appointments and care when they needed them.

**Measure sets:** CCO Incentive metric, State performance metric, and core performance metric.

**Purpose:** Improving access to timely care and information helps increase the quality of care and reduce costs. Measuring access to care is also an important part of identifying disparities in health care and barriers to quality care, including a shortage of providers, lack of transportation, or long waits to get an appointment.

**Benchmark:** 88.0%

**Benchmark source:** average of the 2013 national Medicaid 75th percentiles for adults and children

**Data source:** Consumer Assessment of Healthcare Providers and Systems (CAHPS)

**2014 data**

Statewide, the percentage of individuals reporting they were able to access care quickly when they needed it remained steady. Parents report their children have greater access to care than adults do across all racial and ethnic groups.

Performance among CCOs was fairly consistent, ranging from a low of 79.3 percent to a high of 90.0 percent. Half of CCOs improved their performance in 2014, four CCOs met their improvement target, and one CCO met the benchmark.

**Statewide data**

Statewide, members overall reported their access to care improved slightly in 2014.

**2011:** 83%

**2013:** 83.6%

**2014:** 83.8%

Access to care statewide results: children versus adults.

**2011:** Children 76.1%, Adults 79.4%

**2013:** Children 87.1%, Adults 80.1%

**2014:** Children 87.6%, Adults 80.1%

**Race and ethnicity data**

Asian American members reported the greatest improvement in access to care between 2013 and 2014. Each race category excludes Hispanic/Latino. Data missing for 9.2% of adults and 8.5% of children.

**Adults**

Asian American: 61% to 72.5%

American Indian/Alaska Native: 81.3% to 87.5%

Hispanic/Latino: 73.4% to 79%

Hawaiian/Pacific Islander: 78.2% to 78.3%

White: 83.1% to 81.3%

African American/Black: 76.5% to 74.0%
Children

Asian American: 69.8% to 96.1%
American Indian/Alaska Native: 88.3% to 90.5%
Hawaiian/Pacific Islander: 88.2% to 87.7%
African American/Black: 84% to 82.6%
Hispanic/Latino: 84% to 82.6%
White: 92.7% to 91.2%

CCO data

Members in half of 16 CCOs reported improved access to care between 2013 and 2014.

Health Share of Oregon: 80.2% to 85.6%
FamilyCare: 81.6% to 84.9%
Yamhill CCO: 81.7% to 84.4%
PrimaryHealth of Josephine County: 87.8% to 90.0%
Willamette Valley Community Health: 83.1% to 84.5%
Eastern Oregon: 83.7% to 84.8%
Umpqua Health: 82% to 82.7%
Intercommunity Health Network: 85.8% to 85.9%
Cascade Health Alliance: 80.3% to 80.1%
AllCare Health Plan: 85.0% to 83.6%
Jackson Care Connect: 87.5% to 85.2%
Trillium: 84.6% to 82.2%
Columbia Pacific: 87.0% to 83.4%
Western Oregon Advanced Health: 88.9% to 85%
PacificSource - Gorge: 86.1% to 79.8%
PacificSource - Central: 79.3% to 86.4%

The following CCOs earned an incentive payment on this measure by meeting the benchmark or improvement target:
Health Share of Oregon
FamilyCare
Yamhill CCO
PrimaryHealth of Josephine County
ADOLESCENT WELL-CARE VISITS

About this measure

Measure description: Percentage of adolescents and young adults (ages 12-21) who had at least one well-care visit during the year.

Measure sets: CCO Incentive metric, State performance metric.

Purpose: Youth who can easily access preventive health services are more likely to be healthy and able to reach milestones such as high school graduation and entry into the work force, higher education, or military service.

2014 Benchmark: 56.7%
Benchmark source: 2013 National Medicaid 75th percentile (administrative data only)
Data source: Administrative (billing) claims

2014 data (n=121,714)
Statewide results continued to improve from 2013 to 2014, reaching 32.0 percent, but remained well below the benchmark. Well-care visits increased for all races and ethnicities, and 13 of 16 CCOs improved performance on this measure in 2014. However, only five CCOs achieved their improvement target or benchmark. There remains much room for improvement on this measure.

Barriers to improvement may include providers performing (and billing for) acute care visits and sports physical exams when a patient would benefit from comprehensive well care, cultural shifts, changes in recommendations for clinical care, and concerns about confidentiality of sensitive services. In addition, visits occurring in school-based health clinics may not be captured in the data.

Statewide data
Statewide, the percentage of adolescents receiving a well-care visit increased slightly in 2014.

2011: 27.1%
2013: 29.2%
2014: 32.0%

Race and ethnicity data
Adolescent well-care visits increased across all races and ethnicities between 2013 and 2014. Each race category excludes Hispanic/Latino. Data missing for 8.5% of respondents.

Asian American: 34.8% to 41.6%
Hawaiian/Pacific Islander: 26.3% to 32.9%
American Indian/Alaska Native: 27.2% to 31.3%
Hispanic/Latino: 31.9% to 35.6%
White: 27.2% to 29.3%
African American/Black: 36.6% to 37.8%
CCO data

Thirteen of 16 CCOs increased adolescent well-care visits between 2013 and 2014, although none reached the benchmark.

Columbia Pacific: 12.3% to 26.4%
Jackson Care Connect: 22.6% to 27.7%
Health Share of Oregon: 33.5% to 37.8%
Willamette Valley Community Health: 24.8% to 28.7%
PrimaryHealth of Josephine County: 25.5% to 29.1%
Yamhill CCO: 28.9% to 31.6%
FamilyCare: 43.4% to 45.6%
Umpqua Health Alliance: 28.6% to 30.8%
Intercommunity Health Network: 22% to 24.1%
Trillium: 26.8% to 28.7%
AllCare Health Plan: 20.5% to 22.1%
Eastern Oregon: 22.3% to 23.9%
PacificSource - Gorge: 31.9% to 32.2%
PacificSource - Central: 27.5% to 27.1%
Western Oregon Advanced Health: 35.8% to 34.3%
Cascade Health Alliance: 24.2% to 19.4%

The following CCOs earned an incentive payment on this measure by meeting the benchmark or improvement target:
Columbia Pacific
Jackson Care Connect
Health Share of Oregon
Willamette Valley Community Health
PrimaryHealth of Josephine County
SCREENING FOR ALCOHOL AND OTHER SUBSTANCE MISUSE (SBIRT)

About this measure

Measure description: The SBIRT measure, or Screening, Brief Intervention, and Referral to Treatment, measures the percentage of adult members (ages 18 and older) who had appropriate screening and intervention for alcohol or other substance abuse.

Measure sets: CCO Incentive metric, State performance metric, and core performance metric.

Purpose: By offering a simple but effective screening for alcohol or drug abuse during an office visit, providers can help patients get the care and information they need to stay healthy. If risky drinking or drug use is detected, a brief intervention, and in some cases referral to additional treatment, helps the patient recover more quickly and avoid serious health problems.

2014 Benchmark: 13.0%

Benchmark source: Metrics and Scoring Committee consensus

Data source: Administrative (billing) claims

2014 data (n=374,481)

Performance on screening and brief intervention for alcohol or other substance misuse (SBIRT) increased greatly from 2013 to 2014. Statewide, performance improved from 2.0 percent to 7.3 percent, still well below the benchmark of 13.0 percent.

Screening for alcohol or other substance misuse increased across all races and ethnicities. The African/American population saw the greatest increase from 1.7 percent in 2013 to 7.2 percent in 2014. Fifteen CCOs improved their performance in 2014 and 13 met their improvement target or benchmark.

Beginning in 2015, adolescents will be included in this measure.

Statewide data

Statewide, screening for alcohol or other substance misuse increased substantially in 2014.

2011: .1%
2013: 2.0%
2014: 7.3%

Race and ethnicity data

SBIRT increased across all races and ethnicities between 2013 and 2014.

Each race category excludes Hispanic/Latino. Each race category excludes Hispanic/Latino. Data missing for 10.3% of respondents.

African American/Black: 1.7% to 7.2%
White: 2% to 7.3%
Hispanic/Latino: 1.9% to 7.1%
Hawaiian/Pacific Islander: 1.3% to 5.6%
American Indian/Alaska Native: 2.2% to 5.9%
Asian American: 0.6% to 3.8%
CCO data

CCOs improved markedly on SBIRT between 2013 and 2014, and two achieved the benchmark.

PacificSource - Gorge: 1.9% to 19.8%
Columbia Pacific: 2.8% to 10.9%
Trillium: 0.2% to 7.8%
PrimaryHealth of Josephine County: 1.3% to 8.5%
FamilyCare: 2.0% to 8.8%
Willamette Valley Community Health: 8.7% to 15.2%
Umpqua Health Alliance: 3.0% to 9.3%
Eastern Oregon: 0.8% to 5.5%
Health Share of Oregon: 1.0% to 5.6%
Jackson Care Connect: 0.1% to 4.4%
Western Oregon Advanced Health: 2.3% to 6.5%
Yamhill CCO: 1.7% to 5.0%
AllCare Health Plan: 0.7% to 3.8%
PacificSource - Central: 2.9% to 5.8%
Intercommunity Health Network: 0% to 2.8%
Cascade Health Alliance: 0.8% to 1.6%

The following CCOs earned an incentive payment on this measure by meeting the benchmark or improvement target:
PacificSource - Gorge

AllCare Health Plan
ALL-CAUSE READMISSION

About this measure

**Measure description:** Percentage of adult members (ages 18 and older) who had a hospital stay and were readmitted for any reason within 30 days of discharge. A lower score for this measure is better.

**Measure set:** State performance metric.

**Purpose:** Some patients who leave the hospital end up being admitted again shortly thereafter. Often times, these costly and burdensome "readmissions" are avoidable. Reducing the preventable problems that send patients back to the hospital is the best way to keep patients at home and healthy.

**2014 Benchmark:** 10.5% (lower is better)

**Benchmark source:** Average of 2012 Commercial and Medicare 75th percentiles

**Data source:** Administrative (billing) claims

**2014 data** (n=26,433)
Statewide, all-cause readmissions declined from 2013 to 2014, reaching 11.4 percent and approaching the benchmark of 10.5 percent. Lower is better for this measure. Readmissions improved in 13 of 16 CCOs and for all races and ethnicities except Hawaiian / Pacific Islander.

Statewide data
Statewide, all-cause readmissions improved in 2014.

2011: 12.9%
2013: 12.8%
2014: 11.4%

Race and ethnicity data
Readmissions improved for all races and ethnicities except Hawaiian/ Pacific Islander between 2013 and 2014. Each race category excludes Hispanic/Latino. Each race category excludes Hispanic/Latino. Data missing for 6.6% of respondents.

- **American Indian/Alaska Native:** 18.1% to 13.7%
- **Asian American:** 10.4% to 8.4%
- **White:** 12.7% to 11.4%
- **African American/Black:** 15.1% to 14.2%
- **Hispanic/Latino:** 11.4% to 11.1%
- **Hawaiian/Pacific Islander:** 3.8% to 17.5%

CCO data
Thirteen of 16 CCOs reduced all-cause readmissions between 2013 and 2014.

- **Umpqua Health Alliance:** 13.4% to 8%
- **Cascade Health Alliance:** 11.5% to 7%
- **PacificSource - Central:** 11.1% to 7.2%
- **Western Oregon Advanced Health:** 12.7% to 9.3%
- **Intercommunity Health Network:** 14.6% to 11.5%
FamilyCare: 14.4% to 12%
PrimaryHealth of Josephine County: 7.2% to 5.4%
Willamette Valley Community Health: 13.3% to 11.6%
Health Share of Oregon: 14.8% to 13.3%
PacificSource - Gorge: 13.8% to 12.3%
Jackson Care Connect: 14.2% to 13%
Eastern Oregon: 9.8% to 8.8%
Columbia Pacific: 8.4% to 7.8%
Yamhill CCO: 9.9% to 11.6%
Trillium: 9.8% to 11.8%
AllCare Health Plan: 6.9% to 9.2%
AMBULATORY CARE: EMERGENCY DEPARTMENT UTILIZATION

About this measure

Measure description: Rate of patient visits to an emergency department. Rates are reported per 1,000 member months and a lower number suggests more appropriate use of this care.

Measure sets: CCO Incentive metric, State performance metric, and core performance metric.

Purpose: Emergency departments are sometimes used for problems that could have been treated at a doctor’s office or urgent care clinic. Reducing inappropriate emergency department use can help to save costs and improve the health care experience for patients.

2014 Benchmark: 44.6 (lower is better)
Benchmark source: 2013 National Medicaid 90th percentile
Data source: Administrative (billing) claims.

2014 data (n=9,707,039 member months)
Emergency department utilization continues to decline overall. In 2014, statewide emergency department utilization was 47.3 per 1,000 member months, approaching the benchmark of 44.6. Lower is better for this measure. There is wide variation in utilization by race and ethnicity: emergency department utilization is lowest for the Asian American population at 20.7 per 1,000 member months and highest for the African American/Black population at 66.6 per 1,000 member months. Twelve CCOs improved their performance from 2013 to 2014 and 14 met their improvement target or benchmark.

The continued reduction in emergency department visits is exciting news. Despite a 60 percent increase in enrollment from the Medicaid expansion, new members are not using the emergency department at high rates (see pages 103-104 for more information about emergency department visits and Medicaid membership).

Statewide data

Statewide, emergency department utilization continued to decline.
Rates are reported per 1,000 member months

2011: 61.0
2013: 50.5
2014: 47.3

Race and ethnicity data

Emergency department utilization decreased for all races and ethnicities except American Indian/Alaska Native between 2013 and 2014.
Each race category excludes Hispanic/Latino. Data missing for 10.9% of respondents.

African American/Black: 68.5 to 66.6
Hawaiian/Pacific Islander: 41.1 to 37.9
Asian American: 22.3 to 20.7
White: 54.9 to 53.3
Hispanic/Latino: 36.6 to 35.2
American Indian/Alaska Native: 62.0 to 63.7
**CCO data**

Twelve of 16 CCOs reduced emergency department utilization between 2013 and 2014. 2011 and 2013 data have been updated and may differ from earlier reports.

- **Umpqua Health Alliance**: 74.6 to 64.7
- **FamilyCare**: 50.2 to 43.8
- **PacificSource - Central**: 48.3 to 41.9
- **Western Oregon Advanced Health**: 49.7 to 44.2
- **Eastern Oregon**: 59.2 to 54
- **PacificSource - Gorge**: 46.1 to 42
- **AllCare Health Plan**: 45 to 41.4
- **Health Share of Oregon**: 52.8 to 49.3
- **Columbia Pacific**: 50.9 to 47.5
- **PrimaryHealth of Josephine County**: 40.5 to 38
- **Jackson Care Connect**: 49.2 to 48.0
- **Trillium**: 51.3 to 50.6
- **Intercommunity Health Network**: 48.0 to 48.6
- **Willamette Valley Community Health**: 41.3 to 42.2
- **Yamhill CCO**: 58.9 to 61.1
- **Cascade Health Alliance**: 31.6 to 34.4

The following CCOs earned an incentive payment on this measure by meeting the benchmark or improvement target:

- Umpqua Health Alliance
- FamilyCare
- PacificSource - Central
- Western Oregon Advanced Health
- Eastern Oregon
- PacificSource - Gorge
- AllCare Health Plan
- Health Share of Oregon
- Columbia Pacific
- PrimaryHealth of Josephine County
- Jackson Care Connect
- Trillium
- Willamette Valley Community Health
- Cascade Health Alliance
AMBULATORY CARE: AVOIDABLE EMERGENCY DEPARTMENT UTILIZATION

About this measure

**Measure description:** Rate of patient visits to an emergency department for conditions that could have been more appropriately managed by or referred to a primary care provider in an office or clinic setting. Rates are derived from the ambulatory care: emergency department utilization measure and are reported per 1,000 member months. A lower number suggests more appropriate emergency department utilization.

**Measure sets:** Core performance metric.

**Purpose:** Many patients use emergency departments for conditions that could be treated, or prevented, in a different care setting. Reducing avoidable emergency department utilization is an opportunity to improve care coordination, address high utilization.

**2014 Benchmark:** No benchmark. Lower is better.

**Data source:** Administrative (billing) claims

**2014 data** (n=9,707,039 member months)

Avoidable emergency department visits improved markedly between 2011 and 2014 with an almost 50 percent reduction. Despite a 60 percent increase in enrollment from the Medicaid expansion in 2014, new members are not using the emergency department at high rates for conditions that could be treated in a primary care setting (see pages 105-106 for more information about avoidable emergency department visits and Medicaid membership). Avoidable emergency department visits improved across all racial and ethnic populations and 15 of 16 CCOs, reflecting the statewide focus on providing the right care, in the right setting, at the right time.

**Statewide data**

Statewide, avoidable emergency department utilization declined by almost half since 2011.

Rates are reported per 1,000 member months

- **2011:** 14.2
- **2013:** 8.6
- **2014:** 7.4

**Race and ethnicity data**

- **African American/Black:** 12.2 to 10.7
- **Hispanic/Latino:** 7.8 to 6.6
- **Hawaiian/Pacific Islander:** 8.8 to 7.7
- **Asian American:** 3.4 to 3.1
- **White:** 8.7 to 7.9
- **American Indian/Alaska Native:** 10 to 9.6
CCO data

Avoidable emergency department utilization improved in 15 of 16 CCOs between 2013 and 2014.

Umpqua Health Alliance: 15.9 to 12.6
FamilyCare: 9.1 to 6.7
PacificSource - Central: 8.3 to 6.4
Eastern Oregon: 11.1 to 9.3
PacificSource - Gorge: 8.3 to 6.7
PrimaryHealth of Josephine County: 6.4 to 5.0
Yamhill CCO: 11.9 to 10.4
Health Share of Oregon: 8.9 to 7.5
Western Oregon Advanced Health: 7.5 to 6.3
Columbia Pacific: 8.3 to 7.2
Intercommunity Health Network: 8.9 to 7.8
AllCare Health Plan: 6.5 to 6.0
Jackson Care Connect: 7.5 to 7.1
Trillium: 8.6 to 8.3
Willamette Valley Community Health: 6.3 to 6.1
Cascade Health Alliance: 3.6 to 4.0
AMBULATORY CARE: OUTPATIENT UTILIZATION

About this measure

**Measure description:** Rate of outpatient services, such as office visits, home visits, nursing home care, urgent care and counseling or screening services. Rates are reported per 1,000 member months.

**Measure sets:** State performance metric, core performance metric.

**Purpose:** Promoting the use of outpatient settings such as a doctor’s office or urgent care clinic is part of Oregon’s goal of making sure patients are getting the right care in the right places and at the right times. Increasing the use of outpatient care helps improve health and lower costs by promoting prevention and keeping down rates of unnecessary emergency department use.

**2014 Benchmark:** 473.1

**Benchmark source:** 2013 National Medicaid 90th percentile

**Data source:** Administrative (billing) claims

**2014 data** (n=9,707,039 member months)

There has been a consistent downward trend since 2011 in the rate of outpatient visits. Outpatient visits have declined for all races and ethnicities and have either declined or remained steady across all CCOs. The denominator (member months) increased by nearly 50 percent in 2014 due to the ACA expansion. The addition of this new population could be affecting access to care, causing a reduction in outpatient utilization.

**Statewide data**

Statewide, outpatient ambulatory care rates declined each year.
Rates are reported per 1,000 member months

**2011:** 364.2
**2013:** 323.5
**2014:** 297.5

**Race and ethnicity data**

Outpatient visits declined for all races and ethnicities between 2013 and 2014. Each race category excludes Hispanic/Latino. Each race category excludes Hispanic/Latino. Data missing for 10.9% of respondents.

- **Hawaiian/Pacific Islander:** 221.7 to 205.4
- **Hispanic/Latino:** 267.0 to 250.6
- **African American/Black:** 305.1 to 287.4
- **American Indian/Alaska Native:** 307.6 to 288.8
- **White:** 349.2 to 322.3
- **Asian American:** 319.1 to 289.7

**CCO data**

Outpatient ambulatory care rates declined at a slower rate between 2013 and 2014 than in previous years.
Rates are reported per 1,000 member months.

- **Cascade Health Alliance:** 345.7 to 345.7
Columbia Pacific: 327.3 to 323.4
Yamhill CCO: 302.9 to 293.0
Trillium: 339.6 to 326.2
Umpqua Health Alliance: 342.6 to 325.1
FamilyCare: 267.4 to 249.2
Willamette Valley Community Health: 337.4 to 318.4
PrimaryHealth of Josephine County: 312.9 to 291.6
Intercommunity Health Network: 328.6 to 306.4
Jackson Care Connect: 328.7 to 306.3
PacificSource - Gorge: 298.0 to 275.0
PacificSource - Central: 311.9 to 286.7
Health Share of Oregon: 337.4 to 309.6
Eastern Oregon: 298.2 to 264.3
AllCare Health Plan: 302.4 to 262.8
Western Oregon Advanced Health: 325.2 to 277.7
APPROPRIATE TESTING FOR CHILDREN WITH PHARYNGITIS

About this measure

Measure description: Percentage of children with a sore throat (pharyngitis) who were given a strep test before getting an antibiotic.

Measure sets: State performance metric.

Purpose: A strep test helps determine whether or not a child will benefit from antibiotics for a sore throat (pharyngitis). This test can help reduce the overuse of antibiotics, which can improve care quality and ensure that antibiotics continue to work when they are needed.

2014 Benchmark: 77.9%

Benchmark source: 2013 National Medicaid 75th percentile

Data source: Administrative (billing) claims

2014 data (n=7,975)

After decreasing between 2011 and 2013, statewide results improved in 2014. However, results statewide and for all races and ethnicities remain below the national benchmark. CCO performance was mixed, with nine of 16 CCOs showing improvement between 2013 and 2014. Six of 16 CCOs met the benchmark.

Statewide data

Statewide, appropriate testing for pharyngitis improved in 2014.

- 2011: 73.7%
- 2013: 72.8%
- 2014: 74.2%

Race and ethnicity data

Hispanic/Latino members experienced the greatest improvement in appropriate pharyngitis testing between 2013 and 2014.

Each race category excludes Hispanic/Latino. Each race category excludes Hispanic/Latino. Data missing for 9.6% of respondents.

- Hispanic/Latino: 70.8% to 76.6%
- Asian American: 69.3% to 73.9%
- American Indian/Alaska Native: 69.0% to 70.0%
- White: 73.5% to 73.7%
- African American/Black: 76.5% to 73.9%
- Hawaiian/Pacific Islander: data suppressed (n<30)

CCO data

Nine of 16 CCOs improved appropriate testing for children with pharyngitis between 2013 and 2014.

- Umpqua Health Alliance: 36.7% to 47.0%
- PrimaryHealth of Josephine County: 67.7% to 73.8%
- Columbia Pacific: 59.0% to 64.5%
- PacificSource - Gorge: 74.5% to 80.0%
Eastern Oregon: 61.4% to 66.7%
PacificSource - Central: 83.0% to 87.2%
AllCare Health Plan: 72.2% to 74.8%
Jackson Care Connect: 76.8% to 78.9%
Yamhill CCO: 70.2% to 71.9%
Health Share of Oregon: 73.8% to 73.8%
Willamette Valley Community Health: 83.6% to 82.7%
FamilyCare: 82.0% to 80.0%
Intercommunity Health Network: 69.2% to 66.3%
Trillium: 80.6% to 77.5%
Western Oregon Advanced Health: 64.6% to 60.5%
Cascade Health Alliance: 90.4% to 78.5%
CERVICAL CANCER SCREENING

About this measure

Measure description: Percentage of women (ages 21 to 64) who received one or more Pap tests for cervical cancer during the past three years.

Measure sets: State performance metric.

Purpose: A Pap test helps find early signs of cancer in the cervix when the disease is easier and less costly to treat. Treating cervical cancer in its earliest stages also increases the five-year survival rate to 92 percent, according to the American Cancer Society.

2014 Benchmark: 72.0%

Benchmark source: 2013 National Medicaid 75th percentile

Data source: Administrative (billing) claims

2014 data (n=133,531)
The percentage of women receiving cervical cancer screening continued to decline in 2014. Likewise, screening declined for all races and ethnicities, with the steepest decline occurring among the Hispanic/Latino population. The decreased screening may be due to a number of factors, including changes in national guidelines reported in 2012, which recommend women wait three to five years between Pap tests (his report only looks at tests within a three-year period). Decreased screening also may be due to new members who gained coverage in 2014 and have not been screened.

Statewide data

Statewide, cervical cancer screening has declined.

2011: 56.1%
2013: 53.3%
2014: 44.3%

Race and ethnicity data

Cervical cancer screening declined for all races and ethnicities between 2013 and 2014. Each race category excludes Hispanic/Latino. Data missing for 9.4% of respondents.

African American/Black: 58.2% to 54.4%
White: 51.4% to 44.6%
Asian American: 59.7% to 54.6%
Hawaiian/Pacific Islander: 46.4% to 51.9%
American Indian/Alaska Native: 49.4% to 41.1%
Hispanic/Latino: 62.3% to 42.8%
Benchmark: 72.0%

CCO data

All CCOs experienced a reduction in cervical cancer screening between 2013 and 2014.

Primary Health of Josephine County: 40.5% to 37.4%
Cascade Health Alliance: 54.0% to 48.5%
PacificSource - Gorge: 49.9% to 43.5%
Trillium: 48.5% to 41.1%
Jackson Care Connect: 55.9% to 47.9%
PacificSource - Central: 52.9% to 44.7%
AllCare Health Plan: 51.4% to 43.0%
Eastern Oregon: 51.6% to 42.8%
Western Oregon Advanced Health: 48.3% to 39.2%
Umpqua Health Alliance: 55.6% to 46.4%
Willamette Valley Community Health: 55.8% to 46.5%
Yamhill CCO: 58.9% to 48.6%
Columbia Pacific: 50.3% to 38.7%
FamilyCare: 54.4% to 41.9%
Intercommunity Health Network: 51.4% to 39.1%
Health Share of Oregon: 55.3% to 47.8%
CHILDHOOD AND ADOLESCENT ACCESS TO PRIMARY CARE PROVIDERS (ALL AGES)

About this measure

Measure description: Percentage of children and adolescents (ages 12 months: 19 years) who had a visit with a primary care provider.

Measure sets: State performance metric.

Purpose: Access to a primary care provider is important for the healthy growth and development of children and teens. Measuring visits with a primary care provider ensure youth are receiving necessary services to support their development and health.

2014 Benchmark: 93.5%

Benchmark source: 2013 National Medicaid 75th percentile (average of the four age breakouts for this measure)

Data source: Administrative (billing) claims

2014 data (n=326,370)

This measure tracks child and adolescent access to primary care providers by measuring the percentage of children who had a visit with a primary care provider during the past year. The measure is reported for all ages and four age ranges. This set of metrics is an area with opportunity for improvement because access to primary care providers has declined or remained steady across all age categories. In particular, the youngest children experienced the greatest decline, perhaps because new members who gained coverage in 2014 as part of the ACA expansion have not yet had a primary care visit. Children ages 7-19 who are new to OHP are not included in the measure because the age group is required to be enrolled with a CCO for two continuous years Data at the CCO level are not available for this measure.

Statewide data

Statewide, access to primary care providers declined slightly for children and adolescents (all ages)

2011: 88.5%
2013: 87.0%
2014: 86.0%

Race and ethnicity data

African American children and adolescents experienced the greatest improvement in access between 2013 and 2014. Each race category excludes Hispanic/Latino. Each race category excludes Hispanic/Latino. Data missing for 9.7% of respondents.

African American/Black: 77.9% to 85.8%
American Indian/Alaska Native: 85.4% to 87.7%
Asian American: 88.1% to 85.6%
Hawaiian/Pacific Islander: 86.2% to 75.2%
Hispanic/Latino: 88.3% to 87.7%
White: 86.6% to 85.8%

CCO data

Data at the CCO level are not available for this measure.
CHILDHOOD AND ADOLESCENT ACCESS TO PRIMARY CARE PROVIDERS (12-24 MONTHS)

About this measure

Measure description: Percentage of children and adolescents (ages 12-24 months) who had a visit with a primary care provider.

Measure sets: State performance metric.

Purpose: Access to a primary care provider is important for the healthy growth and development of children and teens. Measuring visits with a primary care provider helps to identify and address barriers to services that can keep youth healthy.

2014 Benchmark: 97.8%
Benchmark source: 2013 National Medicaid 75th percentile
Data source: Administrative (billing) claims

2014 data (n=25,390)
Access to primary care providers among children ages 12-24 months declined at a statewide level and among all racial and ethnic groups between 2013 and 2014. However, the benchmark, an indicator of national performance on this metric, also declined slightly. Access remained below the benchmark for all races and ethnicities in this age category. Children who gained coverage in 2014 are included in the measure. Data at the CCO level are not available for this measure.

Statewide data
Statewide, access to primary care providers declined for children ages 12-24 months.
2011: 97.4%
2013: 96.4%
2014: 92.5%

Race and ethnicity data
Access declined for all races and ethnicities ages 12-24 months between 2013 and 2014. Each race category excludes Hispanic/Latino. Each race category excludes Hispanic/Latino. Data missing for 13.5% of respondents.

American Indian/Alaska Native: 97.4% to 96.1%
African American/Black: 95.7% to 94.0%
White: 95.8%: 93.4%
Asian American: 95.4%: 92.1%
Hawaiian/Pacific Islander: 94.3% to 90.6%
Hispanic/Latino: 98.0% to 93.7%

CCO data
Data at the CCO level are not available for this measure.
**CHILDHOOD AND ADOLESCENT ACCESS TO PRIMARY CARE PROVIDERS (25 MONTHS-6 YEARS)**

**About this measure**

**Measure description:** Percentage of children and adolescents (ages 25 months -6 years) who had a visit with a primary care provider.

**Measure sets:** State performance metric.

**Purpose:** Access to a primary care provider is important for the healthy growth and development of children and teens. Measuring visits with a primary care provider helps to identify and address barriers to services that can keep youth healthy.

**2014 Benchmark:** 91.2%

**Benchmark source:** 2013 National Medicaid 75th percentile

**Data source:** Administrative (billing) claims

**2014 data (n=112,308)**

Access to primary care providers among children ages 25 months: 6 years declined at a statewide level and among all racial and ethnic groups between 2011, 2013, and 2014. However, the benchmark, an indicator of national performance on this metric, also declined slightly. All races and ethnicities were below the benchmark in 2014. Access remains particularly low among the Hawaiian/Pacific Islander population, with 70.0 percent of children in this age group visiting a primary care provider in 2014, compared to the benchmark of 91.2 percent. Children who gained coverage in 2014 are included in the measure. Data at the CCO level are not available for this measure.

**Statewide data**

Statewide, access to primary care providers for children ages 25 months -6 years declined.

**2011:** 86.2%

**2013:** 84.3%

**2014:** 82.3%

**Race and ethnicity data**

Access declined slightly for all races and ethnicities ages 25 months: 6 years between 2013 and 2014. Each race category excludes Hispanic/Latino. Each race category excludes Hispanic/Latino. Data missing for 11.4% of respondents.

- **African American/Black:** 82.6% to 82.3%
- **American Indian/Alaska Native:** 85.9% to 83.3%
- **Asian American:** 86.9% to 83.3%
- **Hawaiian/Pacific Islander:** 71.7% to 70.0%
- **Hispanic/Latino:** 86.9% to 85.4%
- **White:** 83.1% to 81.6%

**CCO data**

Data at the CCO level are not available for this measure.
CHILDHOOD AND ADOLESCENT ACCESS TO PRIMARY CARE PROVIDERS (7-11 YEARS)

About this measure

Measure description: Percentage of children and adolescents (ages 7-11 years) who had a visit with a primary care provider.

Measure sets: State performance metric.

Purpose: Access to a primary care provider is important for the healthy growth and development of children and teens. Measuring visits with a primary care provider helps to identify and address barriers to services that can keep youth healthy.

2014 Benchmark: 93.3%
Benchmark source: 2013 National Medicaid 75th percentile
Data source: Administrative (billing) claims

2014 data (n=83,330)
Access to primary care providers among children ages 7-11 years remained steady at a statewide level between 2013 and 2014. This is the only age group for whom access did not decrease during the measurement year. All races and ethnicities, with the exception of Hawaiian/Pacific Islander, experienced increased access. However, results statewide and for each race and ethnicity remained below the benchmark. Due to measure criteria, this age group does not include children who gained coverage in 2014. Data at the CCO level are not available for this measure.

Statewide data
Statewide, access to primary care providers remained steady for children and adolescents ages 7-11 years.
2011: 88.2%
2013: 87.2%
2014: 87.4%

Race and ethnicity data
Asian American children ages 7-11 years experienced the greatest improvement in access to primary care between 2013 and 2014.
Each race category excludes Hispanic/Latino. Each race category excludes Hispanic/Latino. Data missing for 8.6% of respondents.

Asian American: 85.5% to 86.8%
African American/Black: 84.1% to 84.7%
American Indian/Alaska Native: 87.7% to 8.2%
Hispanic/Latino: 88.7% to 89.1%
White: 86.7% to 86.8%
Hawaiian/Pacific Islander: 76.7% to 74.5%

CCO data
Data at the CCO level are not available for this measure.
CHILDHOOD AND ADOLESCENT ACCESS TO PRIMARY CARE PROVIDERS (12-19 YEARS)

About this measure

Measure description: Percentage of children and adolescents (ages 12-19 years) who had a visit with a primary care provider.

Measure sets: State performance metric.

Purpose: Access to a primary care provider is important for the healthy growth and development of children and teens. Measuring visits with a primary care provider helps to identify and address barriers to services that can keep youth healthy.

2014 Benchmark: 91.8%
Benchmark source: 2013 National Medicaid 75th percentile
Data source: Administrative (billing) claims

2014 data (n=105,342)
Access to primary care providers among adolescents ages 12-19 years remained steady at the statewide level between 2013 and 2014. White and Hawaiian/Pacific Islander populations experienced a decrease in access during the measurement period, while all other races and ethnicities experienced increased access in this age group. Due to measure criteria, this age group does not include children who gained coverage in 2014. Data at the CCO level are not available for this measure.

Statewide data
Statewide, access to primary care providers remained steady for adolescents ages 12-19 years.
2011: 88.9%
2013: 87.6%
2014: 87.4%

Race and ethnicity data
Asian Americans ages 12-19 experienced the greatest improvement in access to primary care between 2013 and 2014. Each race category excludes Hispanic/Latino. Data missing for 7.9% of respondents.

Asian American: 84.4% to 85.5%
African American/Black: 87.0% to 88.0%
American Indian/Alaska Native: 88.6% to 89.3%
Hispanic/Latino: 87.5% to 87.7%
White: 87.9% to 87.5%
Hawaiian/Pacific Islander: 84.8% to 79.7%

CCO data
Data at the CCO level are not available for this measure.
CHILDHOOD IMMUNIZATION STATUS

About this measure

Measure description: Percentage of children who received recommended vaccines before their second birthday.

Measure sets: State performance metric.

Purpose: Vaccines are one of the safest, easiest and most effective ways to protect children from potentially serious diseases. Vaccines are also cost-effective tools which help to prevent the spread of serious diseases which can sometimes lead to widespread public health threats.

2014 Benchmark: 82.0%
Benchmark source: 2013 National Medicaid 75th percentile
Data source: Administrative (billing) claims and ALERT Immunization Information System

2014 data (n=15,108)
Childhood immunization remained fairly steady from 2011 baseline, with a slight improvement in 2014. At 67.8 percent, statewide performance was still well below the benchmark of 82.0 percent. Childhood immunization improved slightly for African American, White, and Hispanic/Latino members since 2013, but decreased slightly for other races and ethnicities. However, childhood immunization improved for all but two CCOs between 2013 and 2014.

Statewide data
Statewide, childhood immunizations improved.
2011: 66.0%
2013: 65.3%
2014: 67.8%

Race and ethnicity data
Hispanic/Latino and Asian American children received immunizations more frequently than other members in 2013 and 2014.

- African American/Black: 60.6% to 66.1%
- White: 59.5% to 62.1%
- Hispanic/Latino: 78.7% to 79.2%
- Asian American: 82.8% to 77.9%
- Hawaiian/Pacific Islander: 59.6% to 51.8%
- American Indian/Alaska Native: 68.3% to 58.3%

CCO data
Fourteen of 16 CCOs improved childhood immunizations between 2013 and 2014.

- PacificSource - Gorge: 58.9% to 72.4%
- Western Oregon Advanced Health: 49.0% to 59.1%
- Yamhill CCO: 55.9% to 65.2%
- Eastern Oregon: 68.3% to 73.9%
- Cascade Health Alliance: 74.0% to 78.5%
- Trillium: 63.9% to 68.0%
PacificSource - Central: 58.2% to 62.1%
Umpqua Health Alliance: 63.6% to 67.3%
Intercommunity Health Network: 55.1% to 58.2%
Columbia Pacific: 65.3% to 67.9%
Willamette Valley Community Health: 68.8% to 71.2%
Jackson Care Connect: 58.1% to 59.6%
Health Share of Oregon: 69.4% to 70.6%
AllCare Health Plan: 58.8% to 59.6%
FamilyCare: 68.5% to 67.3%
PrimaryHealth of Josephine County: 74.5% to 68.9%
CHLAMYDIA SCREENING IN WOMEN AGES 16-24

About this measure
Measure description: Percentage of sexually active women (ages 16-24) who had a test for chlamydia infection.

Measure sets: State performance metric.

Purpose: Chlamydia is the most common reportable illness in Oregon. Since there are usually no symptoms, routine screening is important to find the disease early so that it can be treated and cured with antibiotics. If chlamydia is not found and treated early, it can lead to pelvic inflammatory disease, which can cause infertility.

2014 Benchmark: 64.0%
Benchmark source: 2013 National Medicaid 75th percentile
Data source: Administrative (billing) claims
Note: 2011 and 2013 data have been updated and may differ from earlier reports.

2014 data (n=26,957)
Chlamydia screenings have continued to decrease since 2011 at a statewide level. The percentage of women ages 16-24 screened for chlamydia also decreased across all races and ethnicities and for 15 of 16 CCOs.

Statewide data
Statewide, chlamydia screening decreased in 2014.

2011: 53.0%
2013: 56.0%
2014: 43.2%

Race and ethnicity data
Chlamydia screening declined for all races and ethnicities between 2013 and 2014.
Each race category excludes Hispanic/Latino. Data missing for 8.2% of respondents.

White: 53.6% to 43.7%
African American/Black: 74.0% to 63.3%
Hispanic/Latino: 57.4% to 46.7%
American Indian/Alaska Native: 57.2% to 46.0%
Asian American: 53.2% to 41.3%
Hawaiian/Pacific Islander: 61.3% to 38.6%

CCO data
Only two CCOs increased chlamydia screening between 2013 and 2014.

PrimaryHealth of Josephine County: 43.0% to 44.4%
Trillium: 46.1% to 43.0%
Umpqua Health Alliance: 41.5% to 35.9%
Intercommunity Health Network: 47.8% to 41.6%
AllCare Health Plan: 50.3% to 42.2%
Jackson Care Connect: 52.2% to 43.5%
Columbia Pacific: 44.8% to 36.0%
Western Oregon Advanced Health: 50.9% to 39.9%
Health Share of Oregon: 65.3% to 54.1%
PacificSource - Gorge: 52.2% to 40.1%
Eastern Oregon: 52.8% to 40.7%
FamilyCare: 61.4% to 48.9%
PacificSource - Central: 56.0% to 43.2%
Cascade Health Alliance: 53.7% to 40.7%
Yamhill CCO: 56.1% to 40.8%
Willamette Valley Community Health: 59.1% to 42.9%
COLORECTAL CANCER SCREENING

About this measure

**Measure description:** Percent of adult members (ages 50-75) who had appropriate screening for colorectal cancer.

**Measure sets:** CCO Incentive metric, State performance metric.

**Purpose:** Colorectal cancer is Oregon’s second leading cause of cancer deaths. With appropriate screening, abnormal growths in the colon can be found and removed before they turn into cancer. Colorectal cancer screening saves lives, while also keeping overall health care costs down.

**2014 Benchmark:** 47.0%

**Benchmark source:** Metrics and Scoring Committee consensus

**Data source:** Administrative (billing) claims and medical record review

**Note:** 2014 data are not comparable to earlier years due to changed methodology

**2014 data (n=6,566)**

The measure specifications for colorectal cancer screening were updated beginning in 2014 to use medical record data. Previously, rates were calculated using administrative data and were reported per 1,000 member months. Performance in 2014 is thus not comparable to earlier years.

Statewide, 46.2 percent of adult members had appropriate screening. This is near the benchmark of 47.0 percent and is comparable to the 49.8 percent of Medicaid members surveyed in the Medicaid Behavioral Risk Factor Surveillance System (MBRFSS) survey who said they were current on colorectal cancer screening in 2014. However, compared to national data for Medicare and commercial populations (where the 75th percentile is 70.0 and 66.0 percent, respectively), Oregon’s colorectal cancer screening rate still has room for improvement.

In 2014, CCO performance ranged from a low of 29.7 percent to a high of 54.0 percent.

**Statewide data**

Statewide, colorectal cancer screening was just below the benchmark in 2014.

**2014:** 46.2%

**Race and ethnicity data**

Race and ethnicity data are not available for this measure.

**CCO data**

Ten of 16 CCOs met the benchmark for colorectal cancer screening in 2014.

This measure does not have an improvement target for 2014.

- **Cascade Health Alliance:** 54%
- **PacificSource - Central:** 53.5%
- **Health Share of Oregon:** 53.3%
- **Western Oregon Advanced Health:** 52.1%
- **Intercommunity Health Network:** 51.8%
- **Umpqua Health Alliance:** 51.7%
- **Trillium:** 50.1%
Willamette Valley Community Health: 48.4%
FamilyCare: 47.4%
Jackson Care Connect: 47.0%
Yamhill CCO: 46.7%
PacificSource - Gorge: 46.7%
PrimaryHealth of Josephine County: 40.5%
Eastern Oregon: 35.3%

COMPREHENSIVE DIABETES CARE: HEMOGLOBIN A1c TESTING

About this measure

Measure description: Percentage of adult patients (ages 18-75) with diabetes who received at least one A1c blood sugar test.

Measure sets: State performance metric.

Purpose: Controlling blood sugar levels is important to help people with diabetes manage their disease. It is also a key way to assess the overall effectiveness of diabetes care in Oregon. By improving the quality of care for diabetes, Oregon can help members avoid complications and hospitalizations that lead to poor health and high costs.

2014 Benchmark: 87.0%
Benchmark source: 2013 National Medicaid 75th percentile.
Data source: Administrative (billing) claims

2014 data (n=27,332)
Testing for blood sugar (HbA1c) among members with diabetes has shown continual improvement since 2011. Testing among Hispanic/Latino and White members also increased, while testing for all other races and ethnicities decreased. Thirteen of 16 CCOs showed an increase for this metric, with several CCOs approaching the benchmark. This improvement was achieved even with a 36 percent increase in the denominator due to the ACA expansion.

Statewide data

Statewide, hemoglobin A1c testing has increased slightly.

2011: 78.5%
2013: 79.3%
2014: 80.8%

Race and ethnicity data

HbA1c testing increased the most for Hispanic/Latino members with diabetes between 2013 and 2014. Each race category excludes Hispanic/Latino. Data missing for 5.9% of respondents.

Hispanic/Latino: 81.5% to 84.7%
White: 78.8% to 79.7%
African American/Black: 82.1% to 80.7%
Asian American: 82.8% to 80.9%
American Indian/Alaska Native: 73.0% to 70.4%
Hawaiian/Pacific Islander: 84.3% to 73.1%

CCO data

Thirteen of 16 CCOs improved hemoglobin A1c testing for members with diabetes between 2013 and 2014.

Eastern Oregon: 70.9% to 80.9%
Columbia Pacific: 76.8% to 84.1%
PacificSource - Gorge: 79.5% to 83.7%
Trillium: 80.0% to 84.2%
FamilyCare: 80.8% to 84.2%
Jackson Care Connect: 79.4% to 82.6%
Umpqua Health Alliance: 77.2% to 80.3%
AllCare Health Plan: 76.6% to 79.6%
Cascade Health Alliance: 82.5% to 85.0%
Willamette Valley Community Health: 78.6% to 80.2%
PacificSource - Central: 76.2% to 77.0%
Intercommunity Health Network: 81.7% to 82.3%
Health Share of Oregon: 80.7% to 81.0%
Yamhill CCO: 83.0% to 82.7%
PrimaryHealth of Josephine County: 75.1% to 71.9%
Western Oregon Advanced Health: 77.0% to 61.0%
COMPREHENSIVE DIABETES CARE: LDL-C SCREENING

About this measure

Measure description: Percentage of adult patients (ages 18-75) with diabetes who received an LDL-C (cholesterol) test.

Measure sets: State performance metric.

Purpose: This test helps people with diabetes manage their condition by measuring the level of "bad" cholesterol (LDL-C) in the blood. Managing cholesterol levels can help people with diabetes avoid problems such as heart disease and stroke.

2014 Benchmark: 80.0%

Benchmark source: 2013 National Medicaid 75th percentile.

Data source: Administrative (billing) claims

2014 data (n=27,332)
The percentage of LDL-C (cholesterol) screening at the statewide level decreased between 2013 and 2014. Screenings held steady or declined among all races and ethnicities. Historically, the measure showed improvement between 2011 and 2013 before declining during the current measurement period. The decline in LDL-C screening may be partially due to updated guidance for the treatment of blood cholesterol from the American College of Cardiology / American Heart Association in 2013, which focus on statin therapy for patients rather than LDL-C control or screening. Three of 16 CCOs showed improvement on this metric.

Statewide data

Statewide, LDL-C screenings for people with diabetes declined in 2014.

Data source: Administrative (billing) claims 2014 Benchmark source: 2013 National Medicaid 75th percentile

2011: 67.2%
2013: 70.1%
2014: 67.8%

Race and ethnicity data

LDL-C screenings declined for most races and ethnicities between 2013 and 2014. Each race category excludes Hispanic/Latino. Data missing for 5.9% of respondents.

Hispanic/Latino: 70.2% to 70.2%
White: 69.7% to 66.9%
Asian American: 76.8% to 70.9%
American Indian/Alaska Native: 64.1% to 56.1%
African American/Black: 73.1% to 64.9%
Hawaiian/Pacific Islander: 72.3% to 60.5%

CCO data
Three of 16 CCOs showed improvement on LDL-C screening for members with diabetes between 2013 and 2014.

**Eastern Oregon**: 61.5% to 67.5%
**Trillium**: 71.4% to 75.3%
**Columbia Pacific**: 66.5% to 70.2%
**Jackson Care Connect**: 66.8% to 65.9%
**Umpqua Health Alliance**: 68.6% to 67.5%
**Willamette Valley Community Health**: 74.2% to 72.4%
**PacificSource - Gorge**: 63.0% to 60.9%
**AllCare Health Plan**: 70.4% to 68.0%
**FamilyCare**: 72.8% to 70.2%

**Health Share of Oregon**: 72.0% to 67.3%
**PacificSource - Central**: 64.6% to 59.5%
**Cascade Health Alliance**: 63.5% to 57.7%
**Western Oregon Advanced Health**: 65.9% to 50.2%
CONTROLLING HIGH BLOOD PRESSURE

About this measure
Measure description: Percentage of patients 18-85 years of age who had a diagnosis of hypertension (high blood pressure) and whose blood pressure was adequately controlled (<140/90mmHg) during the measurement period.

Measure sets: CCO Incentive metric, State performance metric.

Purpose: Uncontrolled hypertension can have serious complications, including heart disease and stroke. Better control of blood pressure has been shown to reduce the probability that these complications will occur.

2014 Benchmark: 64.0%
Benchmark source: 2013 National Medicaid 75th percentile.
Data source: Clinical data – Electronic Health Records

2014 data
Statewide, 64.6 percent of adults with high blood pressure had their blood pressure adequately controlled in 2014. This surpasses the benchmark of 64.0 percent. Eight of 16 CCOs also met the benchmark. Results by CCO ranged from a high of 72.5 percent to a low of 52.2 percent. As 2014 marks the first year of results on this measure, comparison data are not available.

Statewide in 2014, 28.3 percent of adults on Medicaid reported that a doctor told them they have high blood pressure, according to the Medicaid Behavioral Risk Factor Surveillance System (MBRFSS) Survey.

Statewide data
Statewide, 64.6 percent of adults with high blood pressure had their blood pressure adequately controlled in 2014.
2014: 64.6%

Race and ethnicity data
Race and ethnicity data are not available for this measure.

CCO data
CCO performance on controlling high blood pressure ranged between 52.2 and 72.5 percent in 2014. All CCOs received credit for submitting Year Two Technology Plans and required data for this measure. 2013 data are not available for this measure.

PrimaryHealth of Josephine County: 72.5%
Jackson Care Connect: 68.2%
Willamette Valley Community Health: 67.0%
Western Oregon Advanced Health: 67.0%
Health Share of Oregon: 67.0%
PacificSource - Gorge: 66.5%

Yamhill CCO: 61.3%
Cascade Health Alliance: 58.1%
Trillium: 57.1%
Eastern Oregon: 52.2%

All 16 CCOs earned an incentive payment on this measure by meeting the benchmark or improvement target.
DEPRESSION SCREENING AND FOLLOW-UP PLAN

About this measure

**Measure description:** Percentage of patients ages 12 years and older who were screened for clinical depression using an age-appropriate standardized depression screening tool AND if positive, have a documented follow-up plan.

**Measure sets:** CCO Incentive metric, State performance metric.

**Purpose:** Depressive disorders are highly prevalent, chronic and costly, affecting medical outcomes, economic productivity and quality of life. Comprehensive screening in primary care may help providers identify undiagnosed depression and initiate appropriate treatment, improving these members’ depression and alleviating their suffering sooner or more thoroughly than if they had not been screened.

**2014 Benchmark:** 25.0%
**Benchmark source:** Metrics and Scoring Committee consensus.
**Data source:** Clinical data – Electronic Health Records

**2014 data**

Statewide, results on depression screening and follow-up met the benchmark in 2014. CCO results varied widely, ranging from a high of 68.1 percent to a low of 3.3 percent. The range of CCO performance on this measure in part reflects the challenges of adopting and implementing electronic health record functionality that enables the reporting of all data elements required for this measure.

2014 is the first year results are reported for this measure, so comparison data are not available.

Statewide in 2014, 36.8 percent of adults on Medicaid reported that a doctor told them they have depression, according to the 2014 Medicaid Behavioral Risk Factor Surveillance System Survey.

**Statewide data**

Statewide, depression screening and follow-up was higher than the benchmark in 2014.

**2014:** 27.9%

**Race and ethnicity data**

Race and ethnicity data are not available for this measure.

**CCO data**

CCO performance on depression screening and follow-up was varied in 2014.

All CCOs received credit for submitting Year Two Technology Plans and required data. 2013 data are not available for this measure.

Yamhill CCO: 68.1%
FamilyCare: 58.7%

DEVELOPMENTAL SCREENING IN THE FIRST 36 MONTHS OF LIFE

About this measure

Measure description: Percentage of children who were screened for risks of developmental, behavioral and social delays using standardized screening tools in the 12 months preceding their first, second or third birthday.

Measure sets: CCO Incentive metric, State performance metric, and core performance metric.

Purpose: Early childhood screening helps find delays in development as early as possible, which leads to better health outcomes and reduced costs. Early developmental screening provides an opportunity to refer children to the appropriate specialty care before problems worsen. Often, developmental delays are not found until kindergarten or later -- well beyond the time when treatments are most helpful.

2014 Benchmark: 50.0%
Benchmark source: Metrics and Scoring Committee consensus.
Data source: Administrative (billing) claims

2014 data (n=52,839)
The percentage of children who received a developmental screen in the first 36 months of life increased from 33.1 percent in 2013 to 42.6 percent in 2014, making progress toward the benchmark of 50.0 percent. Developmental screening increased for all races and ethnicities between 2013 and 2014, although screening was below the benchmark for all. CCOs exhibited consistent improvement with 14 of 16 CCOs improving performance in 2014 and 15 meeting their improvement target or benchmark. Examples of interventions CCOs have taken to improve developmental screening include provider training and education, collaborating with early learning hubs, and developing alternate payment methodologies for providers to incentivize increased screening.

Statewide data
Statewide, developmental screening continued to increase.
2011: 20.9%
2013: 33.1%
2014: 42.6%

Race and ethnicity data
Developmental screening increased across all races and ethnicities between 2013 and 2014. Each race category excludes Hispanic/Latino. Data missing for 10.0% of respondents.

Hispanic/Latino: 28.7% to 41.1%
Asian American: 31.2% to 41.9%
White: 35.6% to 43.7%
African American/Black: 35.2% to 41.9%
Hawaiian/Pacific Islander: 32.0% to 37.1%
American Indian/Alaska Native: 36.0% to 37.4%
**CCO data**

Overall, CCOs increased developmental screenings between 2013 and 2014, and 15 of 16 achieved the benchmark or improvement target.

- **PacificSource - Gorge**: 8.1% to 41.8%
- **PacificSource - Central**: 31.6% to 52.1%
- **Trillium**: 28.3% to 45.0%
- **Jackson Care Connect**: 23.5% to 37.1%
- **AllCare Health Plan**: 30.0% to 43.1%
- **Willamette Valley Community Health**: 23.9% to 34.4%
- **Health Share of Oregon**: 33.9% to 44.2%
- **PrimaryHealth of Josephine County**: 62.7% to 72.2%
- **Columbia Pacific**: 33.1% to 41.0%
- **Umpqua Health Alliance**: 27.2% to 35.0%
- **Yamhill CCO**: 16.8% to 23.9%
- **Eastern Oregon**: 30.0% to 35.9%
- **Cascade Health Alliance**: 58.0% to 63.7%
- **FamilyCare**: 50.7% to 53.6%
- **Intercommunity Health Network**: 24.9% to 26.9%
- **Western Oregon Advanced Health**: 57.1% to 53.5%

DIABETES HbA1c POOR CONTROL

About this measure

Measure description: Percentage of patients 18-75 years of age with diabetes who had hemoglobin A1c > 9.0% during the measurement period (lower scores on this measure are better).

Measure sets: CCO Incentive metric, State performance metric.

Purpose: Diabetes is a leading cause of death and disability in the United States. Poor glycemic control (as evidenced by HbA1c > 9.0%) increases the likelihood of complications, including poor circulation and nerve damage.

2014 Benchmark: 34.0% (Lower is better)
Benchmark source: 2013 National Medicaid 75th percentile
Data source: Clinical data – Electronic Health Records

2014 data
Statewide, only 21.8 percent of members exhibited poor HbA1c control, better than the national benchmark of 34.0 percent. All CCOs were also better than the benchmark, with results ranging from 11.5 percent to 32.9 percent. 2014 is the first year results are reported for this measure, so comparison data are not available.

Statewide in 2014, 11.6 percent of adults on Medicaid reported that a doctor told them they have diabetes, according to the 2014 Medicaid Behavioral Risk Factor Surveillance System (MBRFSS) Survey, compared to 8.5 percent of the general population.

Statewide data
Statewide, only 21.8 percent of people with diabetes had poorly controlled diabetes in 2014.
2014: 21.8%

Race and ethnicity data
Race and ethnicity data for this measure are not available.

CCO data
All 16 CCOs met the benchmark for diabetes HbA1c poor control in 2014. 2013 data are not available for this measure.

Cascade Health Alliance: 11.5%
PacificSource - Central: 14.7%
Willamette Valley Community Health: 17.7%
PacificSource - Gorge: 18%
Intercommunity Health Network: 18.9%
Eastern Oregon: 21.6%
Health Share of Oregon: 23%
Yamhill CCO: 23.7%
Umpqua Health Alliance: 26.3%
Trillium: 26.3%
PrimaryHealth of Josephine County: 26.4%
AllCare Health Plan: 27.9%
Western Oregon Advanced Health: 28.4%
FamilyCare: 31.1%
Columbia Pacific: 32.5%
Jackson Care Connect: 32.9%

All CCOs received credit for 1) submitting Year Two Technology Plans and required data and 2) achieving the benchmark for this measure.
EARLY ELECTIVE DELIVERY

About this measure

**Measure description:** Percentage of women who had an elective delivery between 37 and 39 weeks of gestation. (A lower score is better.)

**Measure sets:** CCO Incentive metric, State performance metric.

**Purpose:** There is a substantial body of evidence showing that an infant born at 37 weeks has worse health outcomes than one born at 40 weeks. Specifically, stays at the neonatal intensive care unit are higher in children at 37-38 weeks than children who completed at least 39 weeks. Because of this, it has become a national and state priority to limit elective deliveries to pregnancies that have completed at least 39 weeks gestation.

**2014 Benchmark:** 5.0% (Lower is better)

**Benchmark source:** Metrics and Scoring Committee consensus.

**Data source:** Administrative (billing) claims, Vital Records, and hospitals.

**2014 data (n=2,789)**
Elective deliveries before 39 weeks decreased 77 percent across the state between 2011 and 2014, from a baseline of 10.1 percent to just 2.3 percent. All CCOs were below the benchmark of five percent in both 2013 and 2014 for this measure, showing continued success across Oregon for better and safer care for mothers and babies.

This promising decrease is likely due to a concerted statewide effort, led by a partnership between the Oregon Association of Hospitals and Health Systems, March of Dimes, Oregon Perinatal Steering committee, and the Northwest Perinatal Network, to eliminate early elective deliveries at all Oregon hospitals.

Due to the steady success on this measure, it will be discontinued as an incentive measure in 2015. However, the state will continue to monitor and report on progress.

**Statewide data**
Statewide, early elective deliveries remained below the benchmark.

- **2011:** 10.1%
- **2013:** 2.6%
- **2014:** 2.3%

**Race and ethnicity data.**
Race and ethnicity for this measure are not available.

**CCO data**
All 16 CCOs remained below the benchmark on early elective deliveries in 2013 and 2014.

- **Willamette Valley Community Health:** 2.4% to 0.5%
- **Umpqua Health Alliance:** 3.6% to 2.0%
- **Jackson Care Connect:** 3.3% to 1.9%
- **Trillium:** 2.2% to 1.3%
- **Cascade Health Alliance:** 2.1% to 1.3%
- **PacificSource - Gorge:** 0.6% to 0.0%
- **AllCare Health Plan:** 1.8% to 1.4%
PrimaryHealth of Josephine County: 0.5% to 0.1%
FamilyCare: 4.3% to 3.9%
Intercommunity Health Network: 2.3% to 2.2%
PacificSource - Central: 0.6% to 0.7%
Health Share of Oregon: 3.5% to 3.6%
Eastern Oregon: 1.8% to 2.2%
Columbia Pacific: 1.6% to 2.8%
Yamhill CCO: 1.2% to 2.4%
Western Oregon Advanced Health: 0.2% to 1.9%

All 16 CCOs earned an incentive payment on this measure by meeting the benchmark or improvement target for this measure.
ELECTRONIC HEALTH RECORD ADOPTION

About this measure

Measure description: Percentage of eligible providers within a CCO’s network and service area who qualified for a “meaningful use” incentive payment during the measurement year through the Medicaid, Medicare, or Medicare Advantage EHR Incentive Programs.

Measure sets: CCO Incentive metric, State performance metric, and core performance metric.

Purpose: Electronic health records have the potential to improve coordination of care, increase patient safety, reduce medical error, and contain health care costs by reducing costly, duplicative tests. Physicians who use electronic health records use information available to make the most appropriate clinical decisions.

2014 Benchmark: 72.0%

Benchmark source: Metrics and Scoring Committee consensus, based on highest performing CCO in July 2013

Data source: State and Federal EHR Incentive Programs

2014 data (n=9,221, total number of eligible providers)

Electronic health record adoption among eligible providers continued to increase dramatically across Oregon. In 2011, 28.0 percent of eligible providers had adopted certified EHRs, but by 2014, 67.7 percent of eligible providers had adopted certified EHRs, an increase of 142 percent. All CCOs improved electronic health record adoption between 2013 and 2014.

The adoption of EHRs is a critical step toward electronic reporting of Clinical Quality Measures (eCQMs). Continuously measuring and electronically reporting clinical quality measures helps ensure that our health care system can deliver effective, safe, efficient, patient-centered, equitable, and timely care. The CCOs’ improvements in this area will help in providing better health, better care and lower costs.

Statewide data

Statewide, electronic health record adoption increased markedly.

2011: 28.0%
2013: 53.7%
2014: 67.7%

Race and ethnicity data.

Race and ethnicity for this measure are not available.

CCO data

All 16 CCOs increased electronic health record adoption between 2013 and 2014, and 10 achieved the benchmark.

PacificSource - Gorge: 52.3% to 84.7%
Western Oregon Advanced Health: 56.3% to 83.8%
Trillium: 44.8% to 67.5%
Umpqua Health Alliance: 63.0% to 84.1%
AllCare Health Plan: 65.7% to 84.0%
Cascade Health Alliance: 56.2% to 73.0%
Eastern Oregon: 44.8% to 60.0%
FamilyCare: 58.3% to 72.9%
Intercommunity Health Network: 58.6% to 72.7%
Willamette Valley Community Health: 68.0% to 81.9%
Jackson Care Connect: 54.4% to 67.7%
Columbia Pacific: 45.2% to 57.4%
Health Share of Oregon: 53.1% to 64.8%
PacificSource - Central: 63.7% to 74.7%
Yamhill CCO: 57.4% to 68.2%
PrimaryHealth of Josephine County: 90.8% to 100.0%

All 16 CCOs earned an incentive payment on this measure for meeting the benchmark or improvement target.
FOLLOW-UP AFTER HOSPITALIZATION FOR MENTAL ILLNESS

About this measure

**Measure description:** Percentage of members (ages 6 and older) who received a follow-up visit with a health care provider within seven days of being discharged from the hospital for mental illness.

**Measure sets:** CCO Incentive metric, State performance metric, and core performance metric.

**Purpose:** Follow-up care is important to help members make progress and feel better after being in the hospital for mental illness. This measure addresses an important issue for children and adults by suggesting timely follow-up for members. Additionally, research shows that follow-up care helps keep members from returning to the hospital, providing an important opportunity to reduce health care costs and improve health.

**2014 Benchmark:** 68.8%

**Benchmark source:** 2013 National Medicaid 75th percentile.

**Data source:** Administrative (billing) claims

**2014 data** (n=2,873)

Follow-up after hospitalization for mental illness declined slightly at a statewide level from 2013 to 2014 and remains just below the benchmark. Follow-up was varied among the three reportable races and ethnicities, with no clear pattern emerging. Six CCOs improved their performance from 2013 to 2014; five of those also met their improvement target or benchmark.

**Statewide data**

Statewide, follow-up after hospitalization for mental illness remained steady between 2013 and 2014.

**2011:** 65.2%

**2013:** 67.6%

**2014:** 66.7%

**Race and ethnicity data.**

Race and ethnicity for this measure are not available.

**CCO data**

CCO performance on follow-up after hospitalization was mixed between 2013 and 2014.

FOLLOW-UP CARE FOR CHILDREN PRESCRIBED ADHD MEDICATION (INITIATION PHASE)

About this measure

Measure description: Percentage of children (ages 6-12) who had at least one follow-up visit with a provider during the 30 days after receiving a new prescription for attention deficit hyperactivity disorder (ADHD) medication.

Measure sets: CCO Incentive metric, State performance metric.

Purpose: Children with attention deficit hyperactivity disorder can be greatly helped by ADHD medication. One critical component of care is that children have follow-up visits once they are on the medication. After a child receives ADHD medication, a primary care provider should continue to assess learning and behavior and help manage the condition.

2014 Benchmark: 51.0%
Data source: Administrative (billing) claims

2014 data (n=2,192)
Statewide, initiation of follow-up care for children prescribed ADHD medication continued to improve and remained above the benchmark. Follow-up care improved for all reportable races and ethnicities to exceed the benchmark. Twelve of sixteen CCOs improved performance during the measurement period and 14 CCOs met or remained above the benchmark. Due to these successes, this measure has been retired as a CCO incentive measure for calendar year 2015, although Oregon will continue monitoring and reporting on it.

Statewide data
Statewide, initiation of follow-up care for children newly prescribed ADHD medication improved in 2014.

2011: 52.3%
2013: 53.3%
2014: 57.7%

Race and ethnicity data
Initiation of follow-up for ADHD medication improved for all reportable races and ethnicities between 2013 and 2014. Each race category excludes Hispanic/Latino. Data missing for 10.9% of respondents.

White: 53.2% to 57.3%
African American/Black: 51.1% to 54.4%
Hispanic/Latino: 53.8% to 57.1%
Hawaiian/Pacific Islander: 79.5% in 2014
American Indian/Alaska Native: Data suppressed (n<30)
Asian American: Data suppressed (n<30)

CCO data
Twelve of 16 CCOs increased follow-up care for children prescribed ADHD medication between 2013 and 2014, and 14 met the benchmark.

PacificSource - Central: 47.7% to 63.9%
Umpqua Health Alliance: 56.7% to 67.3%

FOLLOW-UP CARE FOR CHILDREN PRESCRIBED ADHD MEDICATION (CONTINUATION AND MAINTENANCE PHASE)

About this measure

**Measure description:** Percentage of children (ages 6-12) who remained on attention deficit hyperactivity disorder (ADHD) medication for 210 days after receiving a new prescription and who had at least two follow-up visits with a provider within 270 days after the initiation phase (see page 57).

**Measure sets:** State performance metric.

**Purpose:** Children with attention deficit hyperactivity disorder can be greatly helped by ADHD medication. One critical component of care is that children have follow-up visits once they are on the medication. After a child receives ADHD medication, a primary care provider should continue to assess learning and behavior and help manage the condition.

**2014 Benchmark:** 63.0%

**Benchmark source:** 2013 National Medicaid 90th percentile.

**Data source:** Administrative (billing) claims

**2014 data** (n=1,097)

Ongoing follow-up care for children prescribed ADHD medication has held fairly steady since 2011. Rates declined slightly in the current measurement period. White and Hispanic/Latino children experienced an increase while the African American/Black population showed a decrease on this measure. Data for other races and ethnicities were suppressed due to small populations. Data are not available at the CCO level for 2014.

**Statewide data**

Statewide, ongoing follow-up for children prescribed ADHD medication remained steady.

- **2011:** 61.0%
- **2013:** 61.6%
- **2014:** 60.8%

**Race and ethnicity data**

African American members with ADHD experienced a decline in ongoing follow-up care between 2013 and 2014. Each race category excludes Hispanic/Latino. Data missing for 10.1% of respondents.

- **White:** 60.4% to 61.3%
- **Hispanic/Latino:** 63.0%: 63.1%
- **African American/Black:** 65.1% to 59.0%
- **American Indian/Alaska Native:** Data suppressed due to low numbers (n<30)
- **Asian American:** Data suppressed due to low numbers (n<30)
- **Hawaiian/Pacific Islander:** Data suppressed due to low numbers (n<30)

**CCO data**

Data are not available at the CCO level for 2014.
HEALTH STATUS (CAHPS)

About this measure

Measure description: Percentage of Medicaid members (adults and children) who report their overall health as excellent or very good.

Measure sets: Core performance metric.

Purpose: Self-reported health status is a good predictor of future disability, hospitalization, and mortality. Programs to prevent or manage diseases and increase healthy behaviors can all lead to improved health status.

2014 Benchmark for Adults: 67.0%
2014 Benchmark for Children: 95.0%

Benchmark source: National CAHPS benchmarking database
Data source: Consumer Assessment of Healthcare Providers and Systems (CAHPS)

2014 data
The percentage of adult Medicaid members who reported their overall health is good, very good, or excellent has improved from 2013 to 2014. This improvement may be due in part to the influx of new Medicaid members after the ACA took effect January 1, 2014. Prior to 2014, a higher percentage of adult members were eligible for Medicaid due to disability. With the influx of new, previously ineligible members in 2014, the proportion of healthier members may have increased.

The percentage of children whose parents/guardians reported that they feel healthy has not changed much since 2013.

The only race and ethnicity among whom both children and adults reported feeling healthier between 2013 and 2014 were White members. Hispanic/Latino were the only group among whom both children and adults reported feeling less healthy between 2013 and 2014.

Statewide data

Adults
Statewide, more adults reported good overall health in 2014 than in 2013.
2011: 56.0%
2013: 63.0%
2014: 67.2%

Children
Statewide, children’s self-reported health status remained fairly steady.
2011: 93.0%
2013: 95.0%
2014: 94.6%

Race and ethnicity data
Hispanic/Latino members were the race and ethnicity in which both adults and children reported feeling less healthy in 2014 than in 2013.
Each race category excludes Hispanic/Latino. Data missing for 9.2% of adults and 8.5% of children.
Adults

White: 61.0% to 67.2%
African American/Black: 63.6% to 69.8%
Asian American: 73.5% to 75.2%
American Indian/Alaska Native: 52.6% to 54.0%
Hawaiian/Pacific Islander: 69.9% to 68.0%
Hispanic/Latino: 69.4% to 67.3%

Children

Hawaiian/Pacific Islander: 97.9% to 100.0%
White: 96.9% to 97.3%
African American/Black: 97.8% to 96.6%
Hispanic/Latino: 93.2% to 91.3%
Asian American: 98.4% to 96.3%
American Indian/Alaska Native: 96.6% to 94.4%

CCO data

Adult self-reported health status improved in a greater number of CCOs than child health status between 2013 and 2014.

Adults

Intercommunity Health Network: 57% to 72.9%
Western Oregon Advanced Health: 48% to 58.9%

IMMUNIZATION FOR ADOLESCENTS

About this measure

Measure description: Percentage of adolescents who received recommended vaccines before their 13th birthday.

Measure sets: State performance metric.

Purpose: Like young children, adolescents also benefit from immunizations. Vaccines are a safe, easy and cost-effective way to prevent serious disease. Vaccines are also cost-effective tools that help to prevent the spread of serious and sometimes fatal diseases.

2014 Benchmark: 77.1%

Benchmark source: 2013 National Medicaid 75th percentile.

Data source: Administrative (billing) claims and ALERT Immunization Information System

2014 data (n=13,719)

Although adolescent immunizations continued to increase statewide over 2011 baseline and reached 55.1 percent in 2014, there is still much improvement needed to reach the benchmark (77.1 percent). Adolescent immunizations improved for all races and ethnicities for whom data are published, and ten of 16 CCOs.

Statewide data

Statewide, adolescent immunizations improved.

2011: 49.2%
2013: 52.9%
2014: 55.1%

Race and ethnicity data

Adolescent immunizations improved for all races and ethnicities between 2013 and 2014. Each race category excludes Hispanic/Latino. Data missing for 7.1% of respondents.

Hawaiian/Pacific Islander: 59.4% in 2014 (Data suppressed in 2013 [n<30])
American Indian/Alaska Native: 44.9% to 62.6%
Asian American: 54.1% to 57.6%
Hispanic/Latino: 64.1% to 67.3%
African American/Black: 60.4% to 63.0%
White: 46.0% to 47.6%

CCO data

While many CCOs improved between 2013 and 2014, adolescent immunizations remain below the benchmark.

Cascade Health Alliance: 46.6% to 61.6%
Columbia Pacific: 29.6% to 36.4%
Yamhill CCO: 62.1% to 68.8%
PacificSource - Gorge: 56.5% to 63.1%
FamilyCare: 58.9% to 63.3%
Health Share of Oregon: 59.9% to 64.0%
Jackson Care Connect: 35.3% to 38.9%
Trillium: 53.9% to 55.0%
Intercommunity Health Network: 36.5% to 37.1%
AllCare Health Plan: 34.1% to 34.5%
Eastern Oregon: 54.8% to 53.9%
Willamette Valley Community Health: 55.2% to 54.1%
PacificSource - Central: 60.5% to 59.2%
Umpqua Health Alliance: 39.4% to 36.8%
Western Oregon Advanced Health: 45.9% to 33.3%
PrimaryHealth of Josephine County: 60.3% to 43.4%
INITIATION AND ENGAGEMENT OF ALCOHOL OR OTHER DRUG TREATMENT (INITIATION PHASE)

About this measure

Measure description: Percentage of members (ages 13 and older) newly diagnosed with alcohol or other drug dependence and who began treatment within 14 days of the initial diagnosis.

Measure sets: Core performance metric.

Purpose: There are more deaths, illnesses and disabilities from substance abuse than from any other preventable health condition. Deliberate efforts to reach those with alcohol or other drug dependence and keep them engaged in treatment can improve health outcomes and save on health care costs.

2014 Benchmark: 38.2%
Benchmark source: 2013 national Medicaid median
Data source: Administrative (billing) claims

2014 data (n=13,404)
Statewide, the percentage of members ages 13 and older newly diagnosed with alcohol or drug dependence who began treatment within 14 days of diagnosis surpassed the benchmark in 2014. Nine of 16 CCOs performed above the benchmark (2013 national Medicaid median). However, with fewer than 40 percent of newly diagnosed members receiving timely alcohol or drug treatment, there is much room for improvement.

Statewide data
Statewide, initiation of alcohol or other drug treatment improved.
2011: 33.0%
2013: 33.3%
2014: 39.2%

Race and ethnicity data
Initiation improved markedly for Asian American members between 2013 and 2014. Each race category excludes Hispanic/Latino. Data missing for 9.7% of respondents.

Asian American: 30.0% to 52.3%
African American/Black: 31.4% to 42.1%
White: 30.3% to 38.4%
Hispanic/Latino: 42.0% to 42.3%
American Indian/Alaska Native: 34.5% to 32.8%
Hawaiian/Pacific Islander: Data suppressed (n<30)

CCO data
Fifteen of sixteen CCOs improved initiation of alcohol or other drug treatment between 2013 and 2014.

Jackson Care Connect: 31.2% to 44.8%
Western Oregon Advanced Health: 35.0% to 44.3%
Health Share of Oregon: 29.5% to 37.8%
FamilyCare: 33.6% to 41.3%
AllCare Health Plan: 33.0% to 40.4%
Umpqua Health Alliance: 27.9% to 35.3%
Yamhill CCO: 35.7% to 42.8%
Trillium: 33.7% to 39.9%
Cascade Health Alliance: 30.7% in 2014 (Data suppressed in 2013 [n<30])
PacificSource - Central: 34.2% to 38.6%
Columbia Pacific: 33.0% to 36.2%
PrimaryHealth of Josephine County: 42.4% to 45.5%
PacificSource - Gorge: 32.3% to 35.4%
Eastern Oregon: 35.8% to 37.8%
Willamette Valley Community Health: 36.0% to 37.0%
Intercommunity Health Network: 44.1% to 43.1%
INITIATION AND ENGAGEMENT OF ALCOHOL OR OTHER DRUG TREATMENT (ENGAGEMENT PHASE)

About this measure

Measure description: Percentage of members (ages 13 and older) who had two or more additional services for alcohol or other drug dependence within 30 days of their initial treatment.

Measure sets: Core performance metric.

Purpose: Many individuals with alcohol and other drug disorders leave treatment prematurely, even though individuals who remain in treatment longer have better outcomes. Ongoing engagement is an important step between the first visit and completing a full treatment. Deliberate efforts to reach those with alcohol or other drug dependence and keep them engaged in treatment can improve health outcomes and save on health care costs.

2014 Benchmark: 10.6%

Benchmark source: 2013 national Medicaid median.

Data source: Administrative (billing) claims

2014 data (n=13,404)
Statewide, the percentage of members ages 13 and older with two or more services for alcohol or drug dependence within 30 days of initial treatment dropped very slightly (less than one percentage point) from 2013 to 2014. This metric decreased in many CCOs, although all were above the benchmark. Nationally, performance on this metric is low with a Medicaid median of 10.6 percent.

Statewide data
Statewide, engagement of alcohol or other drug treatment remained steady.
2011: 18.9%
2013: 21.6%
2014: 21.0%

Race and ethnicity data
Asian American members experienced the greatest improvement between 2013 and 2014. Each race category excludes Hispanic/Latino. Data missing for 9.7% of respondents.

Asian American: 16.7% to 30.2%
African American/Black: 19.7% to 23.5%
White: 19.9% to 20.3%
Hispanic/Latino: 28.4% to 22.6%
American Indian/Alaska Native: 23.4% to 15.0%
Hawaiian/Pacific Islander: Data suppressed (n<30)

CCO data
Engagement in alcohol or other drug treatment declined in 11 CCOs between 2013 and 2014, although all 16 were above the benchmark.

Jackson Care Connect: 21.7% to 26.4%
FamilyCare: 18.6% to 22.2%
Umpqua Health Alliance: 19.2% to 22.7%
Cascade Health Alliance: 17.6% in 2014

PacificSource - Gorge: 15.4% to 14.0%
Intercommunity Health Network: 29.5% to 28.1%
Eastern Oregon: 17.9% to 16.1%
Yamhill CCO: 22.0% to 18.7%
Columbia Pacific: 23.9% to 19.0%
Western Oregon Advanced Health: 27.6% to 22.2%
PrimaryHealth of Josephine County: 33.3% to 26.2%
Willamette Valley Community Health: 24.2% to 15.8%
MEDICAL ASSISTANCE WITH SMOKING AND TOBACCO USE CESSATION (COMPONENT 1)

About this measure

Component 1 description: Percentage of adult tobacco users advised to quit by their doctor.

Measure sets: State performance metric.

Purpose: Tobacco use causes many diseases and quitting can have immediate and long-term health benefits. In addition to improving health outcomes, helping people quit smoking also reduces the costs of treating health problems caused by using tobacco, such as lung cancer and heart disease.

2014 Benchmark: 81.3%
Data source: Consumer Assessment of Healthcare Providers and Systems (CAHPS)

2014 data
Statewide, the percentage of tobacco users who were advised by their doctor to quit declined from 55.0 percent in 2013 to 51.4 percent in 2014. Performance on this measure remained well below the benchmark of 81.4%. According to the 2014 Medicaid Behavioral Risk Factor Surveillance System (MBRFSS) survey, 76.4 percent of smokers want to quit and 62.2 percent of smokers have attempted to quit in the last year. Provider advice to quit is an important motivator for members attempting to quit smoking. While Asian American members had the lowest tobacco use prevalence than any other group (see page 96), a lower percentage of Asian American tobacco users received advice to quit than other races and ethnicities. Half of CCOs improved performance on this measure in 2014, and performance ranged from 42.4 percent to 61.6 percent.

Statewide data
Statewide, the percentage of tobacco users who were advised by their doctor to quit declined in 2014.

2011: 50.0%
2013: 55.0%
2014: 51.4%

Race and ethnicity data
A lower percentage of Asian American tobacco users received advice to quit in 2014 than in 2013. Each race category excludes Hispanic/Latino. Data missing for 9.2% of respondents.

African American/Black: 50.0% to 56.5%
American Indian/Alaska Native: 47.5% to 50.6%
Hispanic/Latino: 47.0% to 50.0%
White: 54.9% to 51.4%
Hawaiian/Pacific Islander: 55.6%: 50.0%
Asian American: 60.0% to 33.3%

CCO data
The percentage of tobacco users who were advised to quit by their doctor increased in half of CCOs between 2013 and 2014.
FamilyCare: 45.0% to 50.7%
Columbia Pacific: 52.6% to 57.6%
PacificSource - Gorge: 43.9% to 48.8%

MEDICAL ASSISTANCE WITH SMOKING AND TOBACCO USE CESSATION (COMPONENT 2)

About this measure

Component 2 description: Percentage of adult tobacco users whose doctor discussed or recommended medication to quit smoking.

Measure sets: State performance metric.

Purpose: Tobacco use causes many diseases and quitting can have immediate and long-term health benefits. In addition to improving health outcomes, helping people quit smoking also reduces the costs of treating health problems caused by using tobacco, such as lung cancer and heart disease.

2014 data

Across the state, doctors were less likely to recommend medication to quit smoking in 2014 (27.5 percent) than in 2013 (28.9 percent). Doctors were more likely to recommend medication to quit smoking to Hawaiian / Pacific Islander members in 2014 than to any other race and ethnicity. Only five of 16 CCOs showed an increase in this measure in 2014 as compared to 2013.

2014 Benchmark: 57.5%
Data source: Consumer Assessment of Healthcare Providers and Systems (CAHPS)

Statewide data

Statewide, a lower percentage of tobacco users said their doctor recommended medication to quit smoking in 2014 than in 2013.

2011: 24.0%
2013: 28.9%
2014: 27.5%

Race and ethnicity data

The percentage of Asian American members whose doctor recommended medication to quit smoking decreased between 2013 and 2014. Each race category excludes Hispanic/Latino. Data missing for 9.2% of respondents.

Hawaiian/Pacific Islander: 25.0% to 37.5%
African American/Black: 26.2% to 34.9%
Hispanic/Latino: 18.0% to 21.2%
American Indian/Alaska Native: 27.3% to 28.0%
White: 29.0% to 26.9%
Asian American: 35.0% to 22.2%

CCO data

The percentage of tobacco users whose doctor recommended medication to quit decreased in 11 of 16 CCOs between 2013 and 2014.
FamilyCare: 21.7% to 33.3%
AllCare Health Plan: 16.8% to 28.3%
PacificSource - Central: 17.2% to 22.9%

Willamette Valley Community Health: 34.4% to 24.7%
Eastern Oregon: 30.0% to 17.4%
MEDICAL ASSISTANCE WITH SMOKING AND TOBACCO USE CESSATION (COMPONENT 3)

About this measure

Component 3 description: Percentage of adult tobacco users whose doctor discussed or recommended strategies to quit smoking.

Measure sets: State performance metric.

Purpose: Tobacco use causes many diseases and quitting can have immediate and long-term health benefits. In addition to improving health outcomes, helping people quit smoking also reduces the costs of treating health problems caused by using tobacco, such as lung cancer and heart disease.

2014 Benchmark: 50.7%
Data source: Consumer Assessment of Healthcare Providers and Systems (CAHPS)

2014 data
The percentage of tobacco users whose doctor discussed or recommended strategies to quit smoking held steady at 23.6 percent in 2014 at the statewide level. Hawaiian / Pacific Islander members were most likely to learn about strategies to quit from their doctor in both 2013 and 2014. Nine of 16 CCOs showed an increase in this measure in 2014 as compared to 2013.

Statewide data
Statewide, the percentage of tobacco users whose doctor recommended strategies to quit smoking remained steady.
2011: 22.0%
2013: 23.6%
2014: 23.6%

Race and ethnicity data
Hawaiian/Pacific Islander tobacco users learned strategies to quit from their doctor more frequently than other members in both 2013 and 2014.
Each race category excludes Hispanic/Latino. Data missing for 9.2% of respondents.

Hawaiian/Pacific Islander: 37.5% to 50.0%
Hispanic/Latino: 14.0% to 22.5%
African American/Black: 22.5% to 30.4%
White: 23.5% to 23.6%
American Indian/Alaska Native: 26.8% to 25.9%
Asian American: 35.0% to 16.7%

CCO data
The percentage of adult tobacco users whose doctor recommended strategies to quit smoking increased in 9 CCOs between 2013 and 2014.
FamilyCare: 18.5% to 29.4%
Health Share of Oregon: 30.1% to 34.3%
Cascade Health Alliance: 23.9% to 27.6%

Yamhill CCO: 28.1% to 21.4%
MENTAL AND PHYSICAL HEALTH ASSESSMENTS WITHIN 60 DAYS FOR CHILDREN IN DHS CUSTODY

About this measure

Measure description: Percentage of children age 4+ who receive a mental health assessment and physical health assessment within 60 days of the state notifying CCOs that the children were placed into custody with the Department of Human Services (foster care). Physical health assessments are required for children under age 4, but not mental health assessments.

Measure sets: CCO Incentive metric, core performance metric.

Purpose: Children who have been placed in foster care should have their mental and physical health checked so that an appropriate care plan can be developed. Mental and physical health assessments are a requirement for the foster program because of their importance to improving the health and well-being of a child in a trying situation.

2014 Benchmark: 90.0%

Benchmark source: Metrics and Scoring Committee consensus.

Data source: Administrative (billing) claims

2014 data (n=1,467)
The percentage of children receiving timely a physical and mental health assessment has continually increased since 2011. In 2014, the statewide results were 70 percent, still substantially below the benchmark of 90 percent. Mental and physical health assessments were fairly consistent for all reportable races and ethnicities. Thirteen CCOs with reportable data both improved their performance and met their improvement targets for this measure in 2014. One CCO achieved timely physical and mental health assessments for 100% of their enrolled children in DHS custody.

Statewide data
Statewide, assessments for children in DHS custody increased in 2014.

2011: 53.6%
2013: 63.5%
2014: 70.0%

Race and ethnicity data
Assessments were below the benchmark for all reportable races and ethnicities in both 2013 and 2014.

American Indian/Alaska Native: 69.2% in 2014, Data suppressed in 2013 (n<30)
African American/Black: 62.3% in 2014, Data suppressed in 2013 (n<30)
Hispanic/Latino: 65.2% in 2014
White: 63.1% to 70.8%
Hawaiian/Pacific Islander: Data suppressed (n<30)
Asian American: Data suppressed (n<30)

CCO data
Overall, CCOs improved markedly on this measure between baseline and 2014, with 15 of 16 meeting the benchmark or improvement target.

Baseline data represent combined 2011 and 2013 performance. These combined data provide larger denominators and
are more comparable to 2014 performance.

PacificSource - Central: 45.7% to 82.4%
Western Oregon Advanced Health: 65.7% to 100.0%
Jackson Care Connect: 39.6% to 72.6%
Trillium: 49.1% to 73.4%

OBESITY PREVALENCE AMONG ADULTS

About this measure

Measure description: Percentage of adult Medicaid members (ages 18 and older) who are obese, defined as body mass index greater than 30.

Measure sets: Core performance metric.

Purpose: Obesity is the second leading cause of preventable death in Oregon and is a major risk factor for many conditions including diabetes, cancer, and heart disease. In addition to improving health outcomes, helping people reach a healthy weight can reduce health care costs.

2013 Benchmark: 41.0% (lower is better)

Benchmark source: Oregon’s 1115 demonstration waiver goals.

Data source: Oregon Behavioral Risk Factor Surveillance System (BRFSS) Survey

2013 data

Obesity prevalence increased from 2012 to 2013 and surpassed the benchmark (lower rates are better). In 2013, 42.0 percent of CCO members were obese. By contrast, 26.9 percent of the general population was obese. 2013 is the most recent year data from the Oregon Behavioral Risk Factor Surveillance System (BRFSS) survey are available.

However, Oregon's 2014 Medicaid Behavioral Risk Factor Surveillance System (MBRFSS) survey found that 36.2 percent of Medicaid members were obese. This slightly lower rate may be due to the inclusion of new members enrolled after the ACA expansion, who may be healthier overall.

Statewide data

Statewide, obesity prevalence increased slightly.

2012 data have been corrected from previous reports.

2011: 38.6%
2013: 40.6%
2014: 42.0%

Race and ethnicity data.

Race and ethnicity for this measure are not available.

CCO data.

CCO for this measure are not available.
### PATIENT-CENTERED PRIMARY CARE HOME ENROLLMENT

#### About this measure

**Measure description:** Percentage of CCO members who were enrolled in a recognized patient-centered primary care home (PCPCH).

**Measure sets:** CCO Incentive metric, State performance metric.

**Purpose:** Patient-centered primary care homes are clinics that have been recognized for their commitment to quality, patient-centered, coordinated care. Patient-centered primary care homes help improve a patient’s health care experience and overall health.

**2014 Benchmark:** no benchmark.

**Benchmark source:** N/A

**Data source:** CCO quarterly report

#### 2014 data

Enrollment in patient-centered primary care homes increased by 56 percent since 2012, the baseline year for this metric. This improvement is impressive considering that CCO enrollment increased more than 60 percent in 2014 due to the ACA Medicaid expansion (see graph at right). See pages 100-109 for more information on the Medicaid population in 2014.

Race and ethnicity data are not available for this measure.

#### Statewide data

Statewide, patient-centered primary care home enrollment continued to increase, despite Medicaid expansion.

- **2011:** 51.8%
- **2013:** 78.6%
- **2014:** 81.0%

CCO enrollment increased more than 60 percent between 2013 and 2014.

- **2013 Q4:** 614,183
- **2014 Q4:** 999,496

#### Race and ethnicity data.

Race and ethnicity for this measure are not available.

#### CCO Data

Overall, PCPCH enrollment continued to increase between 2013 and 2014. All CCOs met requirement for quality pool payment (at least 60% enrollment).

- **Jackson Care Connect:** 41.8% to 77.0%
- **Umpqua Health Alliance:** 73.5% to 89.2%
- **Western Oregon Advanced Health:** 67.6% to 82.2%
- **AllCare Health Plan:** 59.0% to 70.0%
- **Columbia Pacific:** 76.1% to 85.4%
- **FamilyCare:** 74.1% to 80.1%
- **Cascade Health Alliance:** 65.0% to 70.6%
**Health Share of Oregon**: 81.2% to 84.9%
**PrimaryHealth of Josephine County**: 95.6% to 99.0%
**PacificSource - Central**: 89.9% to 92.6%
**Intercommunity Health Network**: 87.6% to 89.2%
**Willamette Valley Community Health**: 90.1% to 91.2%
**PacificSource - Gorge**: 95.4% to 96.4%
**Eastern Oregon**: 63.3% to 61.0%
**Yamhill CCO**: 75.5%: 67.3%
**Trillium**: 85.3%: 60.7%

All 16 CCOs earned an incentive payment on this measure for meeting the benchmark or improvement target.
PQI 01: DIABETES SHORT-TERM COMPLICATION ADMISSION RATE

About this measure

**Measure description:** Rate of adult members (ages 18 and older) with diabetes who had a hospital stay because of a short-term problem from their disease. Rates are reported per 100,000 member years. A lower score is better. PQI stands for Prevention Quality Indicators, which is a set of indicators developed by the Agency for Healthcare Research and Quality to track avoidable hospitalizations.

**Measure sets:** State performance metric.

**Purpose:** Good disease management with a health care provider can help people with chronic diseases avoid complications that could lead to a hospital stay. Improving the quality of care for people with chronic disease to help them avoid hospital stays improves the patient experience of health care and improves overall health outcomes. Decreasing hospital stays is also helps to reduce the costs of health care.

**2014 Benchmark:** 197.2 (lower is better)

**Benchmark source:** 10% reduction from previous year’s statewide rate.

**Data source:** Administrative (billing) claims

**Note:** 2013 data have been updated and may differ from earlier reports

**2014 data** *(n=5,495,358 member months)*

The statewide diabetes short-term complication admission rate declined dramatically from 2013 to 2014 and achieved the benchmark for the first time. Lower is better for this measure. All races and ethnicities experienced a decrease in diabetes short-term complication admission rates with the exception of African American/Black members. CCO results were slightly more mixed, with 11 of 16 showing improvement.

**Statewide data**

Statewide, the diabetes short-term complication admission rate improved.

**2011:** 197.5  
**2013:** 219.1  
**2014:** 144.3

**Race and ethnicity data**

American Indian / Alaska Native members experienced the greatest improvement in admission rates due to short term complications of diabetes between 2013 and 2014.

**American Indian/Alaska Native:** 797.7 to 160.96  
**White:** 248.0 to 168.74  
**Asian American:** 70.6 to 14.17  
**Hispanic/Latino:** 105.8 to 98.26  
**Hawaiian/Pacific Islander:** 0.0 to 0.00  
**African American/Black:** 114.9 to 148.14

**CCO Data**

PrimaryHealth of Josephine County: 290.9 to 46.7
Trillium: 357.7 to 146.2

PacificSource - Gorge: 42.9 to 86.6
Western Oregon Advanced Health: 16.8 to 130.4
PQI 05: CHRONIC OBSTRUCTIVE PULMONARY DISEASE (COPD) OR ASTHMA IN OLDER ADULTS ADMISSION RATE

About this measure

Measure description: Rate of adult members (ages 40 and older) who had a hospital stay because of chronic obstructive pulmonary disease or asthma. Rates are reported per 100,000 member years. A lower score is better. PQI stands for Prevention Quality Indicators, which is a set of indicators developed by the Agency for Healthcare Research and Quality to track avoidable hospitalizations.

Purpose: Good disease management with a health care provider can help people with chronic diseases avoid complications that could lead to a hospital stay. Improving the quality of care for people with chronic disease to help them avoid hospital stays improves the patient experience of health care and improves overall health outcomes. Decreasing hospital stays is also helps to reduce the costs of health care.

2014 Benchmark: 720.9 (lower is better)
Benchmark source: 10% reduction from previous year’s statewide rate.
Data source: Administrative (billing) claims
Note: 2013 data have been updated and may differ from earlier reports

2014 data (n=2,572,352 member months)
Statewide, the admission rate of older adults for COPD or asthma continued to decline from 2013 to 2014. The rate was well below the benchmark for the first time in 2014. Lower is better for this measure. Admission rates improved among all races and ethnicities, although African American/Black members had the highest admission rate. Fourteen of 16 CCOs improved their performance in 2014.

Statewide data
Statewide, the COPD or asthma admission rate improved in 2014.

2011: 1102.1
2013: 801.0
2014: 436.6

Race and ethnicity data
Admission rates for COPD/asthma varied widely but improved for all races and ethnicities between 2013 and 2014. Each race category excludes Hispanic/Latino. Data missing for 10.4% of respondents.

Hawaiian/Pacific Islander: 1,190.6 to 219.3
White: 848.8 to 512.9
Hispanic/Latino: 353.4 to 163.1
American Indian/Alaska Native: 682.5 to 534.1
Asian American: 328.0 to 223.6
African American/Black: 1,326.5 to 1,274.5

CCO Data
Overall, CCOs improved admission rates for COPD or asthma in older adults between 2013 and 2014.

Umpqua Health Alliance: 1,464.6 to 538.0
PacificSource - Gorge: 1,145.0 to 249.0

PRENATAL AND POSTPARTUM CARE: TIMELINESS OF PRENATAL CARE

About this measure

Measure description: Percentage of pregnant women who received a prenatal care visit within the first trimester or within 42 days of enrollment in Medicaid.

Measure sets: CCO Incentive metric, State performance metric.

Purpose: Care during a pregnancy (prenatal care) is widely considered the most productive and cost-effective way to support the delivery of a healthy baby. This measure helps ensure timeliness by tracking the percentage of women who receive an early prenatal care visit (in the first trimester). Improving the timeliness of prenatal care can lead to significantly better health outcomes and cost savings: as more than 40 percent of all babies born in Oregon are covered by Medicaid.

2014 Benchmark: 90.0%
Benchmark source: 2013 National Medicaid 75th percentile.
Data source: Administrative (billing) claims and medical record review

2014 data

The measure specifications for timeliness of prenatal care were updated beginning in 2014 to use medical record data. Previously, this measure used administrative data only; 2014 results are thus not directly comparable to earlier years.

Statewide in 2014, 82.9 percent of pregnant women received a prenatal care visit within the first trimester of pregnancy. All 16 CCOs met the benchmark or improvement target in 2014.

Statewide data

Statewide, four out of five pregnant members received timely prenatal care in 2014.
2014 data are not directly comparable to earlier years due to changed methodology

2011: 65.3%
2013: 67.3%
2014: 82.9%

Race and ethnicity data.

Race and ethnicity for this measure are not available.

CCO Data

All 16 CCOs met the benchmark or improvement target in 2014.
All CCOs met benchmark or improvement target. 2014 results include information from medical records in addition to administrative data; 2013 results are administrative data only and are not directly comparable to 2014.

Western Oregon Advanced Health: 57.4% to 96.9%
Cascade Health Alliance: 70.2% to 95.3%
Trillium: 56.0% to 79.7%
Primary Health of Josephine County: 71.9% to 94.3%
Umpqua Health Alliance: 66.3% to 87.6%
Willamette Valley Community Health: 58.8% to 78.1%
Eastern Oregon: 78.3% to 96.9%
Health Share of Oregon: 68.5% to 83.9%

Yamhill CCO: 70.3% to 73.6%
Columbia Pacific: 64.8% to 68.1%
FamilyCare: 69.8% to 72.4%

All 16 CCOs earned an incentive payment on this measure for meeting the benchmark or improvement target.
PRENATAL AND POSTPARTUM CARE: POSTPARTUM CARE

About this measure

Measure description: Percentage of women who had a postpartum care visit on or between 21 and 56 days after delivery.

Measure sets: State performance metric.

Purpose: Having a timely postpartum care visit helps increase the quality of maternal care and reduces the risks for potential health complications associated with pregnancy. Women who have a visit between 21 and 56 days after delivery can have their physical health assessed and can consult with their provider about infant care, family planning and breastfeeding.

2014 Benchmark: 71.0%

Benchmark source: 2013 National Medicaid 75th percentile.

Data source: Administrative (billing) claims and medical record review.

2014 data (n=5,246)

Statewide, 57.7 percent of women who had a baby during the measurement period also had a postpartum care visit. This is below the benchmark of 71.0 percent. Performance among the 15 CCOs who reported data ranged widely between 24.5 and 80.2 percent.

Measure specifications for postpartum care were updated beginning in 2014 to include medical records. Previously, only administrative claims were used. 2014 results are thus not directly comparable to earlier years.

Statewide data

Statewide, the percentage of women receiving postpartum care was below the benchmark in 2014.

2011: 40.0%
2013: 33.4%
2014: 57.7%

Race and ethnicity data.

Race and ethnicity for this measure are not available.

CCO Data

The percentage of women who had a postpartum care visit ranged between 24.5 and 80.2 percent between CCOs in 2014.

2013 data for this measure are not available at the CCO level.

Western Oregon Advanced Health: 80.2%

PROVIDER ACCESS QUESTIONS FROM THE PHYSICIAN WORKFORCE SURVEY

About this measure

Measure sets: State performance metric.

Purpose: Access to care leads to better health outcomes and more affordable health care. Improving care access for low-income Oregonians can also help reduce health disparities and overall health care costs.

2014 Benchmark: TBD
Data source: Oregon Physician’s Workforce Survey

2014 data

The 2014 Physician Workforce Survey showed that more providers were accepting new Medicaid patients as well as seeing Medicaid patients in 2014 than 2012. Statewide, Medicaid comprised a greater share of the payer mix in 2014 (23.0 percent) than in 2012 (17.0 percent).

In 2014, only 5.8 percent of respondents reported that they were completely closed to Medicaid, a notable decrease from 2009 (17.9 percent).

Component 1: Extent to which providers are accepting new Medicaid patients

Definition: Percentage of providers who are accepting new Medicaid/Oregon Health Plan patients.

Statewide data:
Statewide, more providers were accepting new Medicaid patients in 2014 than 2012.

2012: 86.3%
2014: 94.3%

Component 2: Extent to which providers currently see Medicaid patients

Definition: Percentage of providers who currently care for Medicaid/Oregon Health Plan participants. This information does not include "don't know" or missing survey responses.

Statewide data:
Statewide, more providers were accepting new Medicaid patients in 2014 than 2012.

2012: 86.3%
2014: 94.3%

Component 3: Current payer mix at practices Definition: Percentage of Medicaid payers at practices.

Definition: Percentage of providers who currently care for Medicaid/Oregon Health Plan participants. This information does not include "don't know" or missing survey responses.

Statewide data:
Statewide, Medicaid made up a larger share of provider payer mix in 2014 than 2012.

2012: 17.0%
2014: 21.0%
SATISFACTION WITH CARE (CAHPS)

About this measure

Measure description: Percentage of members (adults and children) who received needed information or help and thought they were treated with courtesy and respect by customer service staff.

Measure sets: CCO Incentive metric, State performance metric, and core performance metric.

Purpose: According to the Agency for Healthcare Research and Quality, the ability of health plans to deliver high-quality clinical and administrative service to their members depends in part on their understanding of basic customer service principles. As in any other service industry, a satisfied member creates value over the course of lifetime: through repeat visits, trusting relationships with the provider, following provider’s advice, etc. Existing members are an invaluable source of information that can help health plans understand how to improve what they do.

2014 Benchmark: 89.0%

Benchmark source: average of the 2013 national Medicaid 75th percentiles for adults and children

Data source: Consumer Assessment of Healthcare Providers and Systems (CAHPS)

2014 data

The percentage of individuals reporting they received needed information and were treated with courtesy and respect by their health plan’s customer service improved slightly from 83.1 percent in 2013 to 84.6 percent in 2014, but remained below the benchmark of 89.0 percent. Among the adult population, all races and ethnicities reported improved satisfaction. Ten of 16 CCOs improved their performance from 2013 to 2014, five met their improvement targets and one CCO met the benchmark.

Statewide data

Statewide, members reported improved satisfaction with care.

2011: 78.0%

2013: 83.1%

2014: 84.6%

Satisfaction with care statewide results: children versus adults.

2011: Children 79.5%, Adults 86.9%

2013: Children 84.1%, Adults 82.1%

2014: Children 85.4%, Adults 83.9%

Race and ethnicity data

Asian American members reported the greatest improvement in satisfaction with care between 2013 and 2014. Each race category excludes Hispanic/Latino. Data missing for 8.5% of adults and 9.2% of children.

Adults

Asian American: 61.0% to 74.1%

African American/Black: 76.5% to 87.0%

Hawaiian/Pacific Islander: 78.2% to 87.5%

Hispanic/Latino: 73.4% to 81.9%

White: 83.1% to 83.9%
American Indian/Alaska Native: 81.3% to 81.3%

Children
Asian American: 69.8% to 79.7%
Hawaiian/Pacific Islander: 87.8% to 94.5%
Hispanic/Latino: 84.0% to 87.0%
African American/Black: 88.2% to 85.7%
White: 92.7% to 84.0%
American Indian/Alaska Native: 88.3% to 68.8%

CCO Data
Members in 10 of 16 CCOs reported improved satisfaction with care between 2013 and 2014.
Health Share of Oregon: 80.0% to 85.6%
Willamette Valley Community Health: 83.9% to 86.9%
Jackson Care Connect: 84.6% to 87.2%
Western Oregon Advanced Health: 81.8%: 83.9%
Trillium: 84.3% to 86.2%
Yamhill CCO: 80.8% to 82.6%
PacificSource - Central: 81.3% to 83.1%

TOBACCO USE PREVALENCE

About this measure

Measure description: Percentage of adult Medicaid members (ages 18 and older) who currently smoke cigarettes or use other tobacco products

Measure sets: Core performance metric.

Purpose: Tobacco use causes many diseases and quitting can have immediate and long-term health benefits. In addition to improving health outcomes, helping people quit smoking also reduces the costs of treating health problems caused by using tobacco, such as lung cancer and heart disease.

2014 Benchmark: 25.0% (lower is better)

Benchmark source: Oregon’s 1115 demonstration waiver goals

Data source: Consumer Assessment of Healthcare Providers and Systems (CAHPS)

2014 data

At the statewide level, tobacco use prevalence decreased from 34.1 percent in 2013 to 33.0 percent in 2014. Lower is better for this measure. Despite the slight decline, Medicaid tobacco use prevalence remained substantially higher than the general population (20.8 percent in 2013) and also remained well above the benchmark of 25.0 percent. When stratified by race and ethnicity, tobacco use prevalence increased among Hispanic/Latino, Hawaiian/Pacific Islander and Asian American populations, and decreased among all others. Interestingly, those races and ethnicities whose rates decreased still had higher prevalence of tobacco use than those groups whose rates increased. CCO performance was also mixed, with tobacco use prevalence decreasing in 10 of 16 CCOs.

Statewide data

Statewide, tobacco use prevalence decreased slightly between 2013 and 2014.

2011: 31.1%
2013: 34.1%
2014: 33.0%

Race and ethnicity data

Tobacco use prevalence improved most for American Indian/Alaska Native members between 2013 and 2014. Each race category excludes Hispanic/Latino. Data missing for 9.2% of respondents.

American Indian/Alaska Native: 52.5% to 44.1%
White: 39.2% to 34.1%
African American/Black: 38.0% to 35.4%
Hispanic/Latino: 17.0% to 17.2%
Hawaiian/Pacific Islander: 32.6% to 33.3%
Asian American: 12.4% to 15.6%

CCO Data

Tobacco use prevalence improved in 10 of 16 CCOs between 2013 and 2014.

Western Oregon Advanced Health: 44.5% to 35.4%
Intercommunity Health Network: 39.8% to 31.4%
PacificSource - Gorge: 34.9% to 26.7%
Columbia Pacific: 46.6% to 38.6%
Umpqua Health Alliance: 37.9% to 29.9%
Yamhill CCO: 39.8% to 32.0%
Health Share of Oregon: 34.3% to 28.8%
FamilyCare: 34.8% to 30.1%
Cascade Health Alliance: 40.0% to 35.9%
AllCare Health Plan: 33.6% to 32.7%
PacificSource - Central: 33.2% to 33.9%
Eastern Oregon: 39.4% to 40.1%
Jackson Care Connect: 33.3% to 34.1%
Trillium: 36.1% to 37.3%
Willamette Valley Community Health: 27.7% to 30.8%
PrimaryHealth of Josephine County: 35.5% to 38.9%
WELL-CHILD VISITS IN THE FIRST 15 MONTHS OF LIFE

About this measure

**Measure description:** Percentage of children who had six visits with their health care provider prior to reaching 15 months of age.

**Measure sets:** State performance metric.

**Purpose:** Regular well-child visits are one of the best ways to detect physical, developmental, behavioral and emotional problems in infants. They are also an opportunity for providers to offer guidance and counseling to parents.

2014 data

Statewide, the percentage of children who had six or more well-child visits in the first 15 months of life remained below the benchmark in 2014, and declined in 13 of 16 CCOs.

The apparent decline between 2013 and 2014 can likely be attributed to a small denominator in 2013: fewer children were counted in the measure due to the statewide transition to CCOs and continuous enrollment criteria for this measure. 2014 results are more representative than 2013.

The low percentage of children receiving well child visits in 2014 maybe also be due to new members not receiving all six visits within 15 months. Statewide, 71.6 percent of children received at least four well-child visits in the first 15 months of life, and 63.8 percent of children received at least five visits.

**2014 Benchmark:** 77.4%

**Benchmark source:** 2013 National Medicaid 90th percentile.

**Data source:** Administrative (billing) claims

Statewide data

Statewide, well-child visits remained below the benchmark.

**2011:** 68.3%

**2013:** 60.9%

**2014:** 50.2%

Race and ethnicity data

Hispanic-Latino children were most likely to have six or more well-child visits in both 2013 and 2014. Each race category excludes Hispanic/Latino. Data missing for 10.9% of respondents.

**African American/Black:** 45.1% to 43.9%

**White:** 58.9% to 48.2%

**Asian American:** 65.8% to 54.3%

**Hispanic/Latino:** 68.6% to 56.5%

**Hawaiian/Pacific Islander:** 36.4% in 2014, Data suppressed in 2013 (n<30)

**American Indian/Alaska Native:** 66.7% to 39.3%

CCO Data

Three of 16 CCOs increased the percentage of children receiving six or more well-child visits between 2013 and 2014.

**Yamhill CCO:** 33.3% to 47.7%
PacificSource - Gorge: 51.4% to 64.9%
PrimaryHealth of Josephine County: 45.7% to 51.9%
Umpqua Health Alliance: 55.0% to 51.4%
Intercommunity Health Network: 51.0% to 46.5%
Trillium: 57.9% to 50.5%
PacificSource - Central: 55.3% to 45.5%
FamilyCare: 60.1% to 49.4%
Health Share of Oregon: 61.3% to 50.4%
Cascade Health Alliance: 73.2% to 62.1%
Willamette Valley Community Health: 64.2% to 51.1%
Eastern Oregon: 69.2% to 55.4%
Columbia Pacific: 61.0% to 45.7%
AllCare Health Plan: 58.3% to 42.8%
Jackson Care Connect: 73.6% to 54.8%
Western Oregon Advanced Health: 75.3%: 46.3%
POST-ACA POPULATION: OVERVIEW

With the Affordable Care Act (ACA) coverage expansion, an increasing number of Oregonians receive health insurance through the Oregon Health Plan (Medicaid). More than 385,313 Oregonians gained coverage in 2014, meaning approximately 999,496 Oregonians were enrolled by the end of the year. Enrollment has continued to increase in 2015, with approximately 1.1 million members enrolled as of April. This section of the report highlights these changes. This section of the report also provides more detailed information on three utilization measures since the ACA expansion: emergency department utilization, avoidable emergency department utilization, and outpatient utilization. Data are presented for calendar year 2014, and are broken out by three groups of members:

Definitions used throughout this section

**Existing members** are clients whose enrollment in the Oregon Health Plan began prior to 2014

**Returning members** are clients who were not enrolled in the Oregon Health Plan during calendar year 2013 but were at some time prior to 2013

**New members** are clients who were newly enrolled in the Oregon Health Plan in 2014 and were not eligible before that point

2014 enrollment by member status

**Existing members:** 67%
**Returning members:** 12%
**New members:** 21%
POST-ACA POPULATION: RACE AND ETHNICITY

Race and ethnicity data in 2013 and 2014
Despite the influx of new members, the racial and ethnic makeup of Medicaid enrollment has not changed much between 2013 and 2014.

Composition based on unique member counts as of December. Data missing: 8% in 2013 and 14% in 2014.

POST-ACA POPULATION: AGE DISTRIBUTION

Age distribution in 2013 and 2014

Prior to the Medicaid expansion in 2014, the majority of the population were children and adolescents. In 2014, more adults were eligible for Medicaid and the proportion of member’s ages 19-64 increased, with the greatest increase being members ages 19-35. When broken out by enrollment history, we see that most children and adolescents had previously been enrolled in Medicaid.

The proportion of member’s ages 19-35 enrolled in Medicaid increased more than other age groups between 2013 and 2014.

POST-ACA POPULATION: EMERGENCY DEPARTMENT UTILIZATION

**Measure description:** Rate of patient visits to an emergency department. Rates are reported per 1,000 member months and a lower number suggests more appropriate use of this care.

**Data source:** Administrative (billing) claims 2014

**Benchmark:** 44.6 (Lower is better)

**Benchmark source:** 2013 National Medicaid 90th percentile

**2014 data** (n= 9,707,039 member months)

The graph below show emergency department visit rates for all CCO members between January 1, 2014 and December 31, 2014. The 2014 rate of 47.3 per 1,000 member months has continued to decline from the 2013 rate of 50.7, despite the influx of new Medicaid members. While some of this decline may be attributed to state and national trends in reduced emergency department utilization, much credit is also due to CCO efforts such as identifying high utilizers, providing care management, and improving access to primary care clinics.

**CCO data**

Statewide: 47.3
Cascade Health Alliance: 34.4

Yamhill CCO: 61.1
Umpqua Health Alliance: 64.7

**Emergency department utilization during 2014, by CCO and member type**

New members used the emergency department less frequently than members who have prior enrollment experience (33.9 versus 49.6 and 56.9 per 1,000 member months).

Members returning to Medicaid in 2014 had the highest rate of emergency department visit use (56.9 per member months).

Statewide, new members with no prior Medicaid enrollment used emergency departments at lower rates than other members.

POST-ACA POPULATION: AVOIDABLE EMERGENCY DEPARTMENT UTILIZATION

Measure description: Rate of patient visits to an emergency department for conditions that could have been more appropriately managed by or referred to a primary care provider in an office or clinic setting.

Rates are derived from the ambulatory care: emergency department utilization measure and are reported per 1,000 member months. A lower rate suggests more appropriate emergency department utilization.

Data source: Administrative (billing) claims

Benchmark: no benchmark (lower is better)

2014 data (n= 9,707,039 member months)

The graph below shows avoidable emergency department visit rates for all CCO members between January 1, 2014 and December 31, 2014. The observed statewide rate of 7.4 is below the 2013 rate of 8.6 despite the large influx of new Medicaid members.

CCO data

Statewide: 7.4

Yamhill CCO: 10.4
Umpqua Health Alliance: 12.6
Avoidable emergency department utilization during 2014, by CCO and member type

New members enrolled in a CCO in 2014 but with no prior Oregon Health Plan enrollment have fewer avoidable emergency department visits than other members (4.7 versus 8.2 and 7.5 per 1,000 member months).

Existing members (enrolled in a CCO in both 2013 and 2014) had the highest rate of avoidable emergency department visits in 2014.

Statewide, new members had lower rates of avoidable emergency department utilization than other members.

POST-ACA POPULATION: EMERGENCY DEPARTMENT UTILIZATION AND AVOIDABLE EMERGENCY DEPARTMENT UTILIZATION BY AGE AND MEMBER TYPE

With the influx of new members due to the ACA expansion, emergency department and avoidable emergency department utilization vary not only by age, but by member type.

Children who returned to Medicaid in 2014 (some prior enrollment experience) had lower emergency department utilization rates than returning adults, but among new members with no prior enrollment experience, older adults have the lowest rates of emergency department utilization. And across all member types, adults ages 36-50 have the highest ED utilization.

Adults generally have lower rates of avoidable emergency department utilization than children, with the exception of new children with no prior Medicaid experience, potentially indicating they have not yet established a source for regular care.

**Emergency Department utilization is highest for existing adults and lowest for returning children**

POST-ACA POPULATION: OUTPATIENT UTILIZATION

**Measure description:** Rate of outpatient services, such as office visits, home visits, nursing home care, urgent care and counseling or screening services. Rates are reported per 1,000 member months.

**Data source:** Administrative (billing) claims

**Benchmark:** 473.1

**Benchmark source:** 2013 National Medicaid 90th percentile.

**2014 data** (n= 9,707,039 member months)

The graph below shows outpatient utilization rates for all CCO members between January 1, 2014 and December 31, 2014. The observed statewide rate of 297.4 is below the 2013 rate of 323.5

**CCO data**
- **Statewide:** 297.5
- **AllCare Health Plan:** 345.7
- **Eastern Oregon:** 326.2
- **FamilyCare:** 325.1
- **Cascade Health Alliance:** 323.4

- **Willamette Valley Community Health:** 262.8
- **Health Share of Oregon:** 249.2
Outpatient utilization during 2014, by CCO and member type

New members enrolled in a CCO in 2014 but with no prior Oregon Health Plan enrollment (blue bars) used outpatient services more frequently than existing members and returning members with prior enrollment experience (301.2 versus 297.8 and 289.0 per 1,000 member months). This is promising, indicating new members are accessing services at the same rate as other members despite the 60 percent increase in enrollment due to the ACA expansion. Statewide, new members utilize care in an outpatient setting at slightly higher rates than other members.

COST AND UTILIZATION DATA: OVERVIEW

This section of the report contains cost and utilization data for Medicaid spanning calendar years 2011: 2014. OHA uses Milliman’s MedInsight Health Cost Guidelines (HCG) Grouper software to classify claims. Cost and utilization data reported here are comparable to reports produced from Oregon’s All-Payer All-Claims database for commercial and Medicare populations.

This report does not include data on services that have occurred but have not yet been recorded or encountered. Data may be incomplete due to lags in submitting data to OHA. Future reports will be updated as more complete data are submitted.
FINANCIAL DATA: INPATIENT COST

Description: Per member per month cost of hospital inpatient services. Costs are calculated by dividing the total paid for services by the total member months.

Purpose: Different hospital inpatient interventions require different levels of resource use. With the coordinated model, utilization of these services is also expected over time.

2014 data:
Per-member per-month costs for inpatient hospital services have decreased by 14.8 percent since 2011, the baseline year. This came at a time when more members were in coordinated care since the 2012 creation of CCOs, and when more individuals had access to health care through the Affordable Care Act beginning in 2014. This indicates utilization was held in check as more members enrolled in Medicaid and the inpatient dollars were spread to a larger population.

Inpatient costs by category over time
Overall, inpatient costs have decreased since 2011.

FINANCIAL DATA: OUTPATIENT COST

**Measure description:** Per member per month cost of outpatient services. Costs are calculated by dividing the total paid for services by the total member months.

**Purpose:** Different hospital outpatient interventions require different levels of resource use. With the coordinated model, utilization of these services is also expected over time.

**2014 data:**
As overall outpatient per member, per month costs have decreased since 2011, two sub-categories have increased: primary care and prescription drugs. With the inception of CCOs, a key focus has been to increase resources at the primary care level to ensure that members are accessing care and treatment plans are initiated in a way that is effective for the patient.

**Outpatient costs by category since 2011**
Overall, outpatient costs have decreased slightly since 2011.

FINANCIAL DATA: OUTPATIENT COST AND UTILIZATION

Primary care and emergency department costs

Measure description: Per member per month cost of primary care services displayed with primary care utilization. Costs are calculated by dividing the total claims paid by the total member months and utilization by dividing total primary care visits annually by 1,000 members.

Per member, per month costs of emergency services are calculated as total costs divided by member months.

Purpose: Primary care and emergency department visits may be influenced by the coordinated care model with the focus on patient-centered primary care enrollment.

2014 data
Primary care costs and utilization continue to trend closely together, declining in the first half of 2014 and then showing a slight increase in the second half. This trend is consistent with previous years and appears to be holding steady in 2014, despite the increase in the Medicaid population due to ACA expansion.

Emergency department costs increased slightly in the first half of 2014 but resumed their decline in the second half, again consistent with the continued decline in emergency department utilization (see pages 18–19). Costs increased slightly the first quarter of each year between 2011 and 2014, suggesting a seasonal trend.

Primary care cost versus utilization over time
Primary care cost and utilization have similar trends.
