FamilyCare Health

CAHPS® 5.0 Child Medicaid without Chronic Condition

Summary Report

June 2018

Introduction. Results from fielding the CAHPS® 5.0 Survey for FamilyCare Health (FCH) provide a comprehensive tool for assessing consumers' experiences with the Coordinated Care Organization (CCO). This report is designed to allow the CCO to look at summaries of members' experiences using two types of presentation. First, this executive summary presents a brief description of the survey methodology, a graphic presentation of key results for rating questions and composites, and a sample disposition. Second, member responses are presented by question, including information about the response options used for scoring achievements. Appendices at the end of the report include a copy of the questionnaire and member responses to custom questions.

Assessing consumers' experience in this report is accomplished with the use of achievement scores and composite scores. Member responses to survey questions are summarized as achievement scores. Responses indicating a positive experience are labeled as achievements, and an achievement score is computed equal to the proportion of responses qualifying as achievements. The lower the achievement score, the greater the need for the CCO to improve. Composite scores are built from achievements for groups of survey items that make up broad domains of members' experience: Getting Needed Care, Getting Care Quickly, How Well Doctors Communicate, Customer Service, and Shared Decision Making.

Results. This report summarizes the findings of the child Medicaid 5.0 CAHPS survey conducted for FCH. Attempts were made to survey 800 member households from a population not likely to have a child with a chronic condition. Member households were contacted by mail and telephone during the period January 9, 2018 through April 9, 2018, using a mixed-mode procedure and standard questionnaire with custom questions. The survey procedure and questionnaire were developed jointly by the Agency for Healthcare Research and Quality and the National Committee for Quality Assurance (NCQA).

The survey drew as potential respondents the parents or caretakers of children under the age of 18 who were continuously enrolled in FCH for at least 6 months as of November 30, 2017, with no more than one enrollment gap of 45 days or less. From this sample frame, a random sample of 800 cases was drawn from a population not likely to have a child with a chronic condition, based on claims or care encounters that met specific diagnostic or service criteria. The survey was offered in English and Spanish.

Questionnaires were considered complete if respondents did not answer "No" to Q1 and provided valid responses to at least three out of five key questions throughout the questionnaire, as per NCQA's completeness requirements. The questions required for completeness are Q3, Q15, Q27, Q31, and Q36. Complete interviews were obtained from 221 FCH members, and the response rate was 28.3%.

SUMMARY OF OVERALL RATING QUESTIONS

Four rating questions assess overall consumer satisfaction with health care, personal doctor, specialist seen most often, and health plan. Response options for overall rating questions range from 0 (worst) to 10 (best). In the table below, ratings of "8," "9," or "10" are considered achievements, and the achievement score is presented as the proportion of members whose response was an achievement. Alternate achievement scores are presented as hollow bars, showing only the response options "9" and "10" as achievements.

Note: Hollow portion of bar represents proportions giving a response of 9 or 10.

SUMMARY OF COMPOSITES

A composite score is calculated for each of five domains of member experience: Getting Needed Care, Getting Care Quickly, How Well Doctors Communicate, Customer Service, and Shared Decision Making. The composite scores provide a summary assessment of how the CCO performed across the domain. In the table below, proportions of positive responses are reported as achievement scores. A response of "Yes" is considered an achievement for the Shared Decision Making composite. For all other composites, responses of "Usually" or "Always" are considered achievements.
