

# Columbia-Suicide Severity Rating Scale Training Webinar

- Hosted by Oregon Health Authority Public Health Division's SBHC Program and Suicide Prevention Program
- Trainer: Adam Lesser, LCSW  
Deputy Director, The Columbia Lighthouse Project

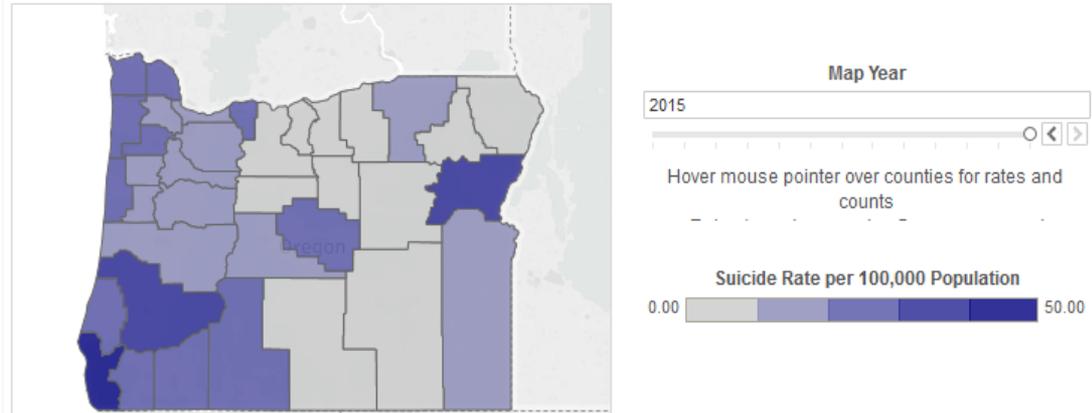

# Suicide in Oregon

Access OHA Data Dashboard and Suicide Map Tool at:

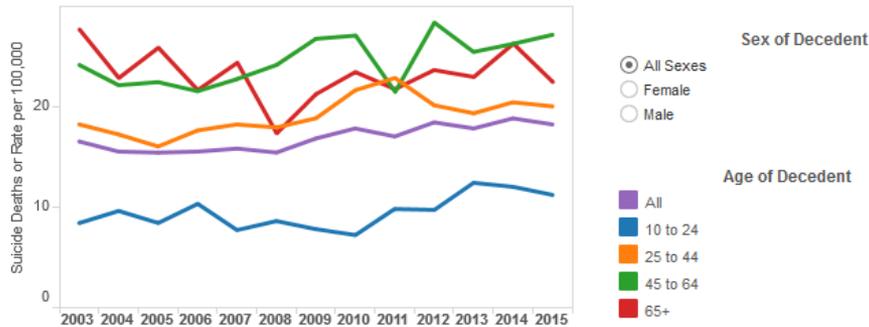

<http://www.oregon.gov/oha/PH/DiseasesConditions/InjuryFatalityData/Pages/index.aspx>

- In 2016, 771 Oregon residents died by suicide.
- 98 of these suicides occurred among Oregon youth aged 10-24.
- Suicide is the 2<sup>nd</sup> leading cause of death among Oregonians aged 10-24 years and has been rising since 2011.
- Male youth are 4X more likely to die by suicide than female youth.

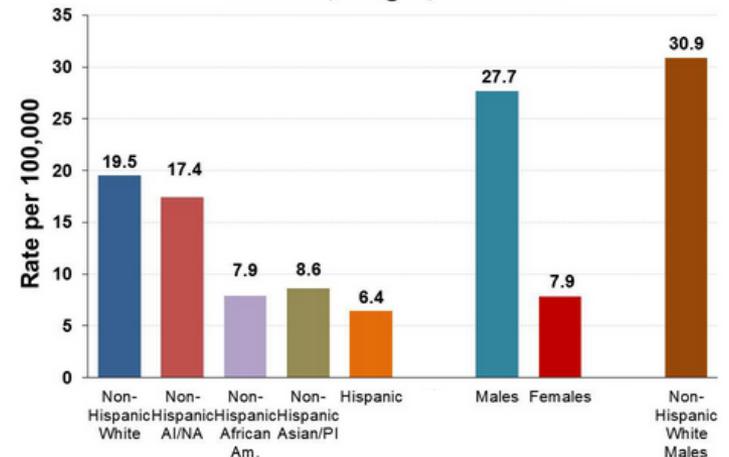

Oregon Suicide Death Map, 2003-2015

Oregon Statewide Suicide Deaths by Age Group and Sex, 2003-2015

Age-Adjusted Suicide Rate, by Race / Ethnicity and Sex, Oregon, 2011-2015

# AT-RISK in PRIMARY CARE

■ Adolescents

## Simulation for Health Care Professionals

- 20-30 minute online learning experience.
- Awards .75 CEUs for physicians, nurses, social workers, and school psychologists.
- Promotes integration of behavioral health in the primary care setting.
- Includes *Virtual Patient* role-play conversation.
- Incorporates practice using motivational interviewing techniques.

# AT-RISK in PRIMARY CARE

## ■ Adolescents

### Learning Objectives

After completing the simulations, users will be able to:

- Recognize the importance of mental health as part of the role of primary care.
- Build rapport with patients using motivational interviewing tactics.
- Broach the topic of mental health and correct common misconceptions.
- Demonstrate appropriate ways to ask a patient about suicidal ideation.
- Take appropriate steps for referral and follow up.

# AT-RISK in PRIMARY CARE

## ■ Adolescents

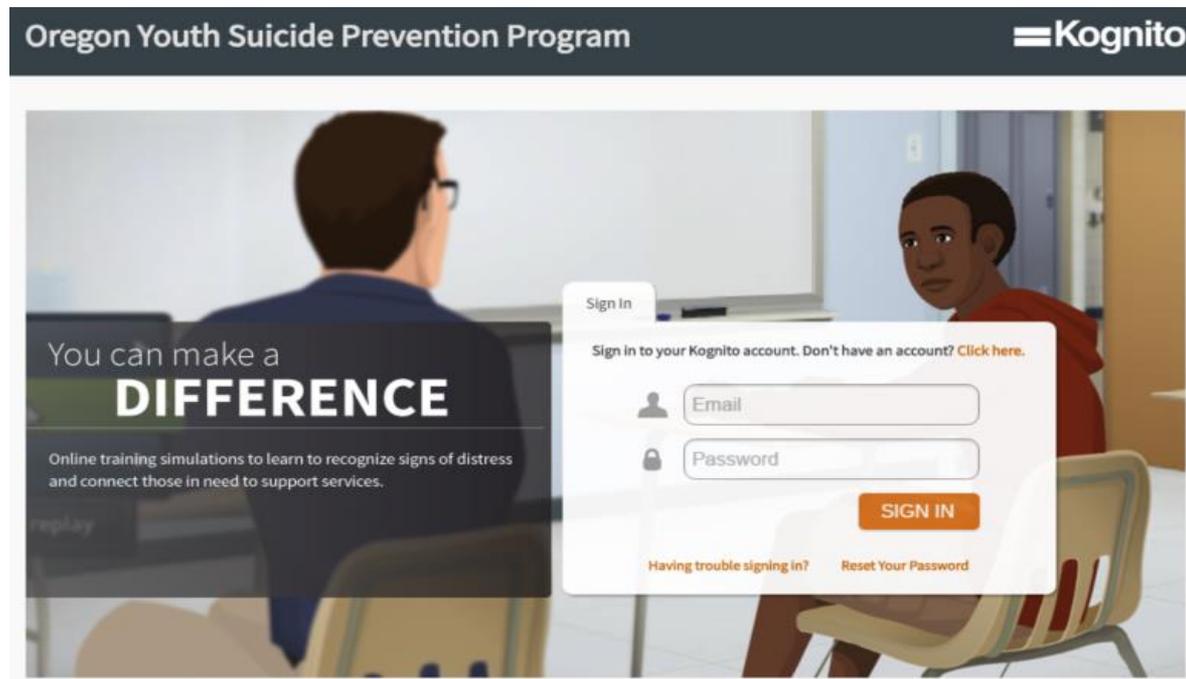

### Conversation

- Broach topic of mental health and normalize mental health concerns.
- Engage Justin in discussion of his mental health and factors that may be contributing to his headaches.
- Uncover thoughts of suicide, assess risk.
- Motivate inclusion of parents.

# Accessing the Simulations

[www.kognito.com/oregon](http://www.kognito.com/oregon)

# Identify Yourself: SBHC staff select Primary Care Professional

The image shows a 'Create an Account (Step 1)' form with the following fields:

- First Name
- Last Name
- Email Address
- Re-enter Email Address
- Choose Password (with a note: Password must be 5+ characters.)
- Re-enter Password

Below the password fields, there is a section for 'Training Point-of-View (POV):' with the instruction: 'Please indicate which choice most closely represents your role in your institution'. A dropdown menu is open, showing 'Choose your Training POV...' with a downward arrow. An orange box labeled 'ED Staff' has an arrow pointing to this dropdown. Another orange box labeled 'Primary Care Professional' is positioned below it.

At the bottom of the form, there is a 'NEXT STEP' button and a link: 'Already have an account? [Sign In](#)'. A line of text above the button reads: 'By clicking "Next Step" you are agreeing to the [Terms of Use](#)'.

# Provide Detailed Information

Step 1  Step 2  Done.

Please select your institution from the drop-down menu. If your institution is not listed, please complete the form on your Spread the Word page.

Please select from one of the following...

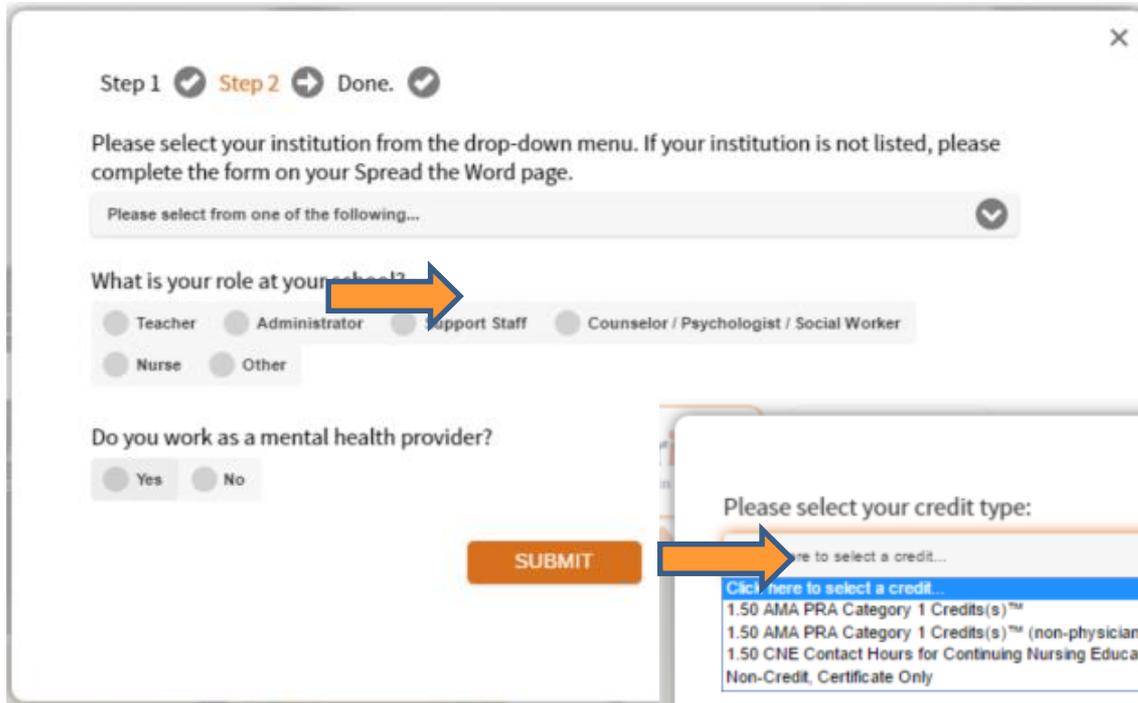

What is your role at your school?

Teacher  Administrator  Support Staff  Counselor / Psychologist / Social Worker

Nurse  Other

Do you work as a mental health provider?

Yes  No

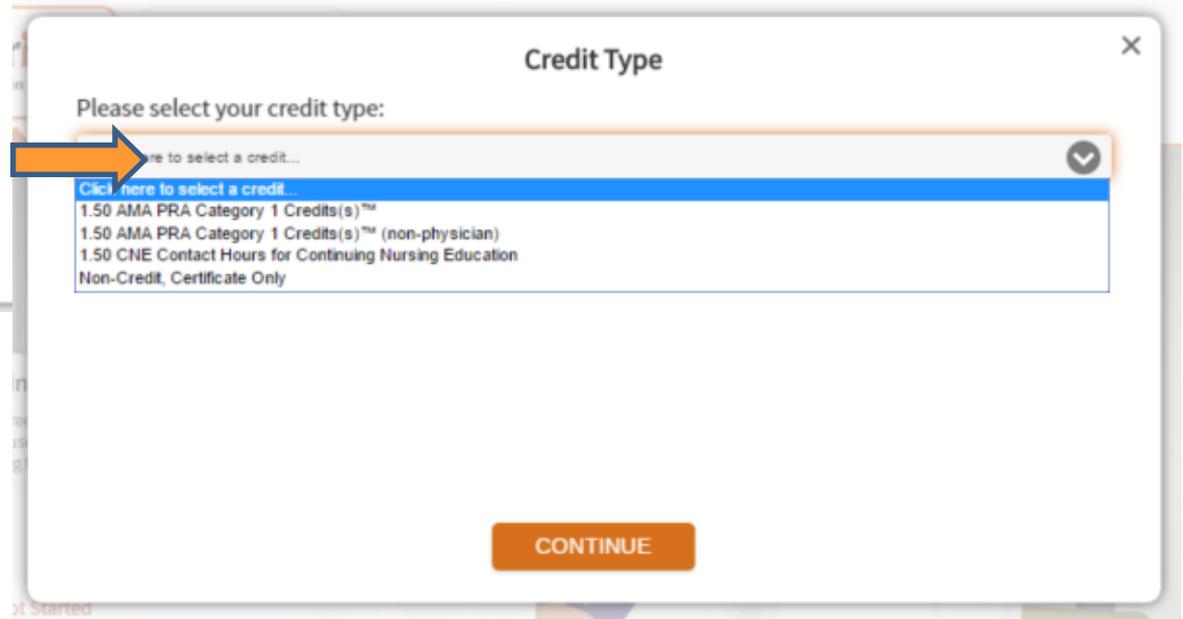

### Credit Type

Please select your credit type:

Click here to select a credit...

- Click here to select a credit...
- 1.50 AMA PRA Category 1 Credits(s)<sup>™</sup>
- 1.50 AMA PRA Category 1 Credits(s)<sup>™</sup> (non-physician)
- 1.50 CNE Contact Hours for Continuing Nursing Education
- Non-Credit, Certificate Only

On March 12, they are holding 3 trainings:

- [QPR-T: Suicide Risk Assessment and Management Training](#)
- [suicide to Hope training](#) (which is considered the next step for those who have taken ASIST and want to learn more about ongoing suicide care)
- [Connect: Suicide Postvention Training](#) (understanding how postvention is prevention).

The conference will be March 13-14, and Dr. Sally Spencer-Thomas and Craig Miller will be speaking. Conference tracks include: loss and attempt survivors; suicide safer care/systems of care, community suicide prevention, and youth/education.

**For more information including the agenda and to register, visit:**

**<https://www.linesforlife.org/2018-oregon-suicide-prevention-conference/>**

# Oregon Zero Suicide Academy: Sept. 18-19, 2018

**Suicide Prevention Healthcare Leader Forum will take place on March 14 from 1-2:30pm**

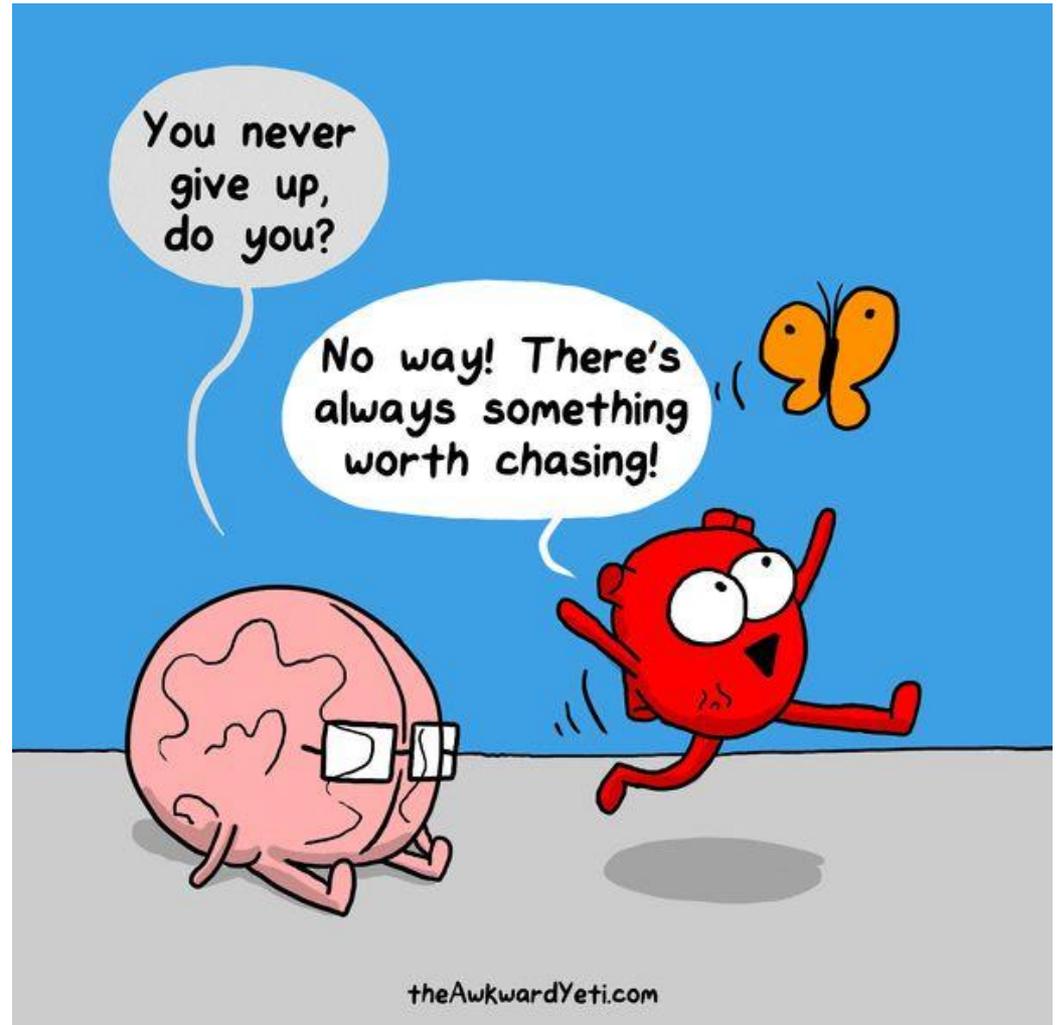

Featured Speakers:

- Zero Suicide faculty member Becky Stoll from Centerstone. One of the nation's largest not-for-profit providers of community-based behavioral health care, Centerstone has tracked significant reductions of suicides within their system since they began implementing Zero Suicide.
- Jan Ulrich from the Zero Suicide Initiative will provide an overview of the Zero Suicide Academy including information about who is eligible to attend the Academy, what the application process entails, and what organizations can gain from participating.

**Please register for Zero Suicide Healthcare Leader Forum at:**

**<https://attendee.gotowebinar.com/register/1031451147562097665>**

# Before We Begin

- Suicide is very personal
- Many of us are survivors, who miss our clients, friends or relatives
- Some may be attempt survivors
- You shouldn't hold yourself responsible for something you didn't do/say in the past based on what you will learn today

**Please take care of yourself during and after this training**

## Opioid Use Disorders and Suicide: A Hidden Tragedy (Guest Blog)

April 20, 2017

At a Congressional briefing on April 6, the **President of the American Psychiatric Association, Dr. Maria Oquendo**, presented startling data about the opioid overdose epidemic and the role suicide is playing in many of these deaths. I invited her to write a blog on this important topic. More research needs to be done on this hidden aspect of the crisis, including whether there may be a link between pain and suicide. —Nora

In 2015, over 33,000 Americans died from opioids—either prescription drugs or heroin or, in many cases, more powerful synthetic opioids like **fentanyl**. Hidden behind the terrible epidemic of opioid overdose deaths looms the fact that many of these deaths are far from accidental. They are suicides.

### About This Blog

Welcome to my blog, here I highlight important work being done at NIDA and other news related to the science of drug abuse and addiction.

# Rural Areas: One of Our Greatest Challenges

Produced by: the Statistics, Programming & Economics Branch, National Center for Injury Prevention & Control, CDC  
 Data Source: NCEM National Vital Statistics System; for numbers of deaths; US Census Bureau for population estimates.

- Highest rates of suicide
- Populations spread out across great distances
- Less consistent access to medical and mental healthcare
- Closest physicians may be several hours away and overburdened
- High rates of gun ownership (Miller et al., 2013)

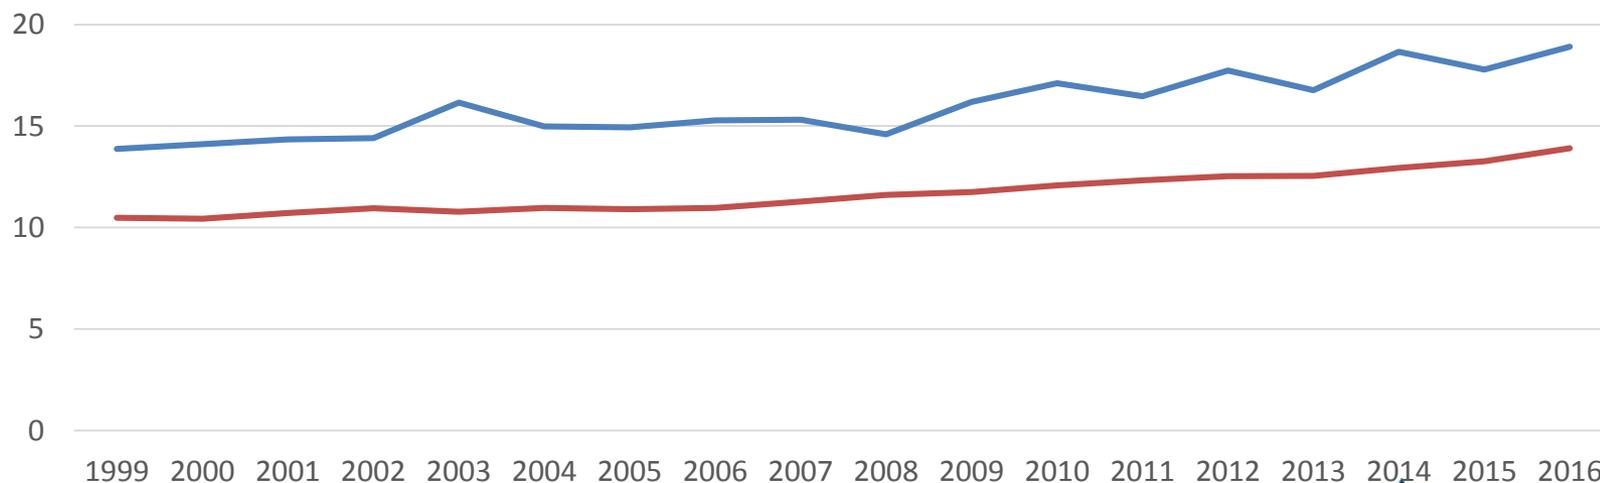

## Data on 2011-2015 Suicides in States with the Highest and Lowest Rates of Gun Ownership

	high	low	ratio
person years	189 million	189 million	
percent of households with guns	56%	20%	
male			
firearm suicides	16487	3921	4.2
nonfirearm suicide	8125	8757	0.9
total	24612	12678	1.9
female			
firearm suicides	3015	335	9.0
nonfirearm suicide	3495	3586	1.0
total	6510	3921	1.7

States with the highest percentage of gun owners include: Wyoming, Montana, Idaho, Mississippi, Vermont, Alaska, Arkansas, W. Virginia, S. Dakota, Tennessee, Maine, Alabama, Utah, Kentucky and Louisiana. States with the lowest percentage of gun owners include: Hawaii, Massachusetts, Rhode Island, New Jersey and New York

# Oregon Suicide Facts

- 2016 - 11<sup>th</sup> highest rate in U.S.
- 1 in 4 suicides in Oregon are Veterans
- Over 80% of gun deaths in Oregon are suicides
- Eviction/loss of home was a factor associated with 199 deaths by suicide (7%) between 2009 and 2012

# Oregon Methods of Suicide

## Mechanism of injury in suicides by sex, Oregon 2016

Method	Males	%	Females	%	Total	%
Firearm	355	61	59	31	414	54
Hanging / suffocation	131	23	53	28	184	24
Poisoning	58	10	60	32	118	15
Fall	14	2	4	2	18	2
All Other	4	1	9	5	15	2
Total	582		190		772	

Source: WISQARS, CDC

# 2015-16 SWS

## 57,000 students statewide

Table 22: Depression and Suicide Ideation

	Grade 6 State	Grade 8 State	Grade 11 State
Did you ever feel so sad or hopeless almost every day for two weeks or more in a row that you stopped doing some usual activities?	19.0	25.9	31.9
Did you ever seriously consider attempting suicide?	10.5	17.6	18.1
Actually attempted suicide?	6.2	9.4	7.8

# Depression: Most Debilitating Disease in the World

- Depression will be the world's most burdensome disease by the year 2030 (WHO, 2008)
- Depression is already the most burdensome disease in middle and high income countries (WHO, 2008)

- **Depression is the #1 cause of work related absence** and costs US workplaces an estimated \$23 billion annually in lost productivity from just those days missed

# Unfortunately, People Who Need Treatment Do Not Get It!

- Most people with mental health issues are not suicidal but 90% of individuals who die by suicide have untreated mental illness (60% depression)
- **Under-treatment of mental illness is pervasive**
  - 50-75% of those in need receive no treatment or inadequate treatment (Alonso et al., 2007; Wang et al., 2005)
  - **70% of children and teens with depression go untreated**
  - >80% of adolescents and college students who die by suicide never received any consistent treatment prior to their death

# MYTHS ABOUT SUICIDE

“If someone is really suicidal, they are probably going to kill themselves at some point no matter what you do”

## This is FALSE!

- Multiple studies have found that **>90%** of attempt survivors including those who make highly lethal attempts **do not go on to die by suicide**
- Most people are suicidal only for a short amount of time
- So, helping someone through a suicidal crisis **can be life-saving**

“Asking a depressed person about suicide may put the idea in their heads”

## This is FALSE!

- Does **not** suggest suicide, or make it more likely
- Open discussion is more likely to be experienced as relief than intrusion
- Risk is in not asking when appropriate

“Someone making suicidal threats won’t really do it, they are just looking for attention”

## **This is FALSE!**

- Those who talk about suicide or express thoughts about wanting to die, are at risk for suicide and need your attention
- Take all threats of suicide seriously. Even if you think they are just “crying for help”—a cry for help, is a cry for help—so help

“There’s no point in asking about suicidal thoughts...if someone is going to do it they won’t tell you”

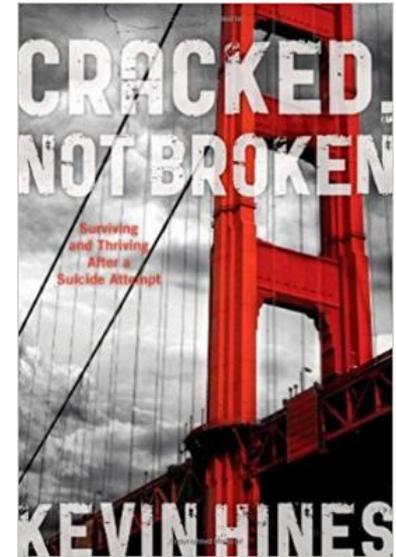

## This is FALSE!

- Many will tell clinician when asked, though might not have volunteered it – often a relief
- **Ambivalence** is characteristic in 95%
- Contradictory statements/behavior common
- 80% give some kind of hints/warnings to friends or family, even if don’t tell clinician

# People Want to Be Asked

- Makes a pact with himself “If one person asks me...
- Goes to Golden Gate Bridge
- Approached by a German tourist
- “I instantly realized that everything in my life that I’d thought was unfixable was totally fixable – except for having just jumped.”
- “Most people considering suicide want someone to save them. What we need is a culture in which no one is afraid to ask.”

“If you stop someone from killing themselves one way, they’ll probably find another”

## This is FALSE!

- “Means safety” – reducing a suicidal person’s access to highly lethal means - has strong evidence as effective suicide prevention strategy

Method	Lethality
Firearm	85%
Suffocation	69%
Fall	31%
Poisoning/overdose	2%
Cuts	1%

# Means Safety Works

## Very Little Method Substitution in all cases

- **United Kingdom 1958** – replacing coal gas with natural gas– suicide rate by carbon monoxide poisoning was cut by 1/3
- **New Zealand 1992** – stricter gun licensing and required locked storage reduced gun suicide in youth by 66%
- **England 1998** – introduced individual blister packaging for Tylenol = 44% reduction in Tylenol overdose over next 11 years
- **Switzerland 2003**- Firearm suicides in men 18-43 decreased by 27% as a direct result of reducing size of Army by 50% thusly reducing the number of soldiers storing guns at home
- **Israeli military 2006** - restricted gun access for off-duty soldiers, suicide rate dropped 40% in military

## Ashley Williams - Maryland

I had PPD with my second child. Things got bad. Very bad. I'm not sure when I started planning suicide, but at the time, it felt like something normal... Like going grocery shopping.

I needed something reliable because I couldn't botch this and then be a medical burden to my family. I don't have a gun. Finding a manner that was fast and reliable took a long time and it was during that time that I recognized what was happening and got help.

That was years ago. I'm fine now, but **I would most likely not be here to write this had there been a gun in my home** at that time

# Working With the Firearm Community

- An estimated 55 Million Americans own a firearm
- CDC reports 22,018 firearm suicides in 2015 (50% of total suicides)
- 2/3 of all gun deaths are suicides

## Uses for C-SSRS

- In gun/sporting shops
- At firing ranges
- In firearm safety training
- At firearm tradeshow

**Identify Risk. Prevent Suicide.**

**Three simple questions to identify suicide risk:**

1. Have you ever wished you were dead or wished you could go to sleep and not wake up?
2. Have you been thinking about how you might kill yourself?
3. Have you ever done anything or prepared to do anything to end your life (such as, given away valuables, written a suicide note, or held a gun but changed your mind)?

If the answer to one of these questions is "yes," or if you or someone you know is in crisis, **free and confidential help is available.**

# SUICIDE IS PREVENTABLE AND EFFORTS DEPEND FIRST UPON ACCURATE IDENTIFICATION

# The Problem and Consequences of Not Having Common Definitions

Field of medicine challenged by lack of clarity about suicidal behavior and absence of well-defined terminology (*research and clinical*)

*Many different terms for the same behavior*

Negative implications on appropriate management of suicide - if suicidal behavior and ideation cannot be properly identified, it cannot be properly understood, managed or treated in any population or diagnosis

***Furthermore, comparison across epidemiological data sets is compromised***

# How to Fix the Problem...

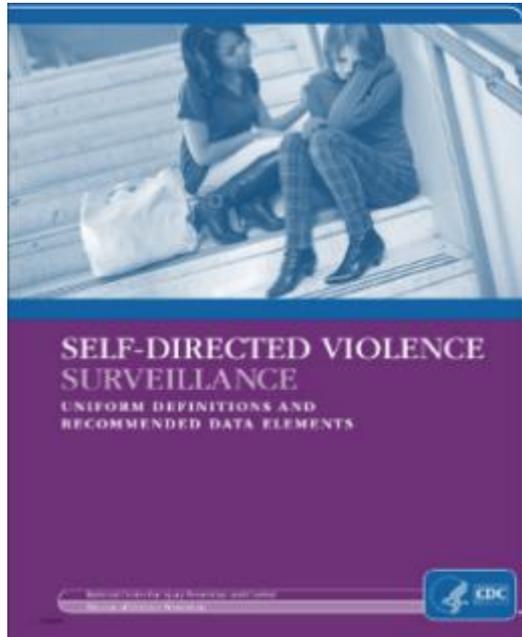

## Columbia - Suicide Severity Rating Scale

*Posner, K.; Brent, D.; Lucas, C.; Gould, M.; Stanley, B.; Brown, G.; Zelazny, J.; Fisher, P.; Burke, A.; Oquendo, M.; Mann, J.*

- Developed in NIMH effort to uniquely address need for summary measure – 1<sup>st</sup> scale to assess full range of ideation and behavior, severity, density, track change
- Many leading experts - collaboration with **Beck's group**
- 10s of millions administrations
- Available in over 100 languages
- Very brief administration time
- Deemed “most” evidenced supported
- Excellent acceptance in practice by patients and providers
- **Age:** suitable across the lifespan for use with adults, adolescents, and young children.
- **Special Populations:** indicated for cognitively impaired (e.g. Alzheimer's, Autism)

# Adopted by CDC: Importance of a Common Language

“The C-SSRS is changing the paradigm in suicide risk assessment in the US and worldwide” – Alex Crosby

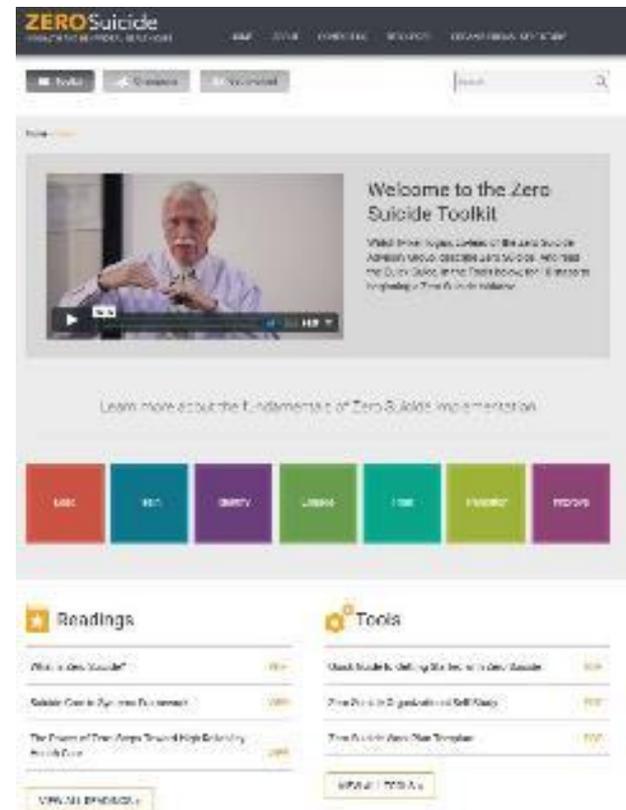

Also from CDC:  
“Unacceptable Terms”

- *Completed suicide*
- Failed attempt
- Parasuicide
- *Successful suicide*
- Suicidality
- Nonfatal suicide
- Suicide gesture
- Manipulative act
- Suicide threat

Source: Posner K, Oquendo MA, Gould M, Stanley B, Davies M. Columbia Classification Algorithm of Suicide Assessment (C-CASA): Classification of Suicidal Events in the FDA's Pediatric Suicidal Risk Analysis of Antidepressants. *Am J Psychiatry*. 2007; 164:1035-1043. <http://cssrs.columbia.edu/>

# Public-Private Partnership: National Action Alliance – Toolkit for Zero Suicide

- NY- Eval of recent suicides all same picture: **No good risk assessment, no safety plan, no warm hand-off**
- C-SSRS and Safety Planning to be used in training all staff to screen *\*all patients\** statewide

# The Centerstone Care Pathway:

“With so many patients its like mining for gold and the Columbia is the sifter”

- Screen everyone at every service delivery point
- Follow-up/Weekly appts, Means restriction on the other end
- If pt is DO NOT SHOW, attempt and document phone-call **within 2 hours**
- If unable to contact referred to Follow-Up specialist who attempts to contact for 3 days for brief telephone risk assessment and encouragement to re-engage, name populates in purple in EHR, enter **Suicide Pathway and Crisis line** which **never shuts down** until they are tracked down

# Everyone, Everywhere Can Ask

- 812 nurses trained - 99% reliability independent of mental health training and education
- Strong inter-rater reliability among non-clinicians in juvenile justice  
-(Kerr, et. al. 2014)

- First Responders
- Juvenile Justice
- Corrections
- Hostage Negotiators
- Parents
- Youth
- Crisis Response Teams
- Hotlines
- **In schools:**
  - Teachers
  - Safety Officers
  - Coaches
  - Road patrol
  - Bus drivers

- Peer to Peer
- Hospitals
- Pediatricians
- VA
- Clergy
- Child Protective Services
- Officers Standing Overnight
- **In behavioral healthcare:**
  - Peer counselors
  - Paraprofessionals
  - Receptionists – “get to hear all the casual conversations staff don’t”
  - Nurses
  - Nurses’ aides
  - Custodial/Janitorial Staff

# ACE Cards in Development for use across all military branches

Answer Questions 1 and 2		In The Past Month	
		YES	NO
1) Have you wished you were dead or wished you could go to sleep and not wake up?			
2) Have you actually had any thoughts about killing yourself?			
If YES to #2, answer questions 3, 4, 5 and 6. If NO to 2, go directly to question 6.			
3) Have you thought about how you might do this?			
4) Have you had any intention of a step on the way thoughts of killing yourself or someone else? Have the thoughts had any deliberate intent not just on them?			
5) Have you started to work out or worked out the details of how to kill yourself? Do you intend to carry out this plan?			
Always Ask Question 6		In the Past 3	
6) Have you done anything, started to do anything or prepared to do anything that you don't want to do?			
Examples: called the police, obtained a gun, given away valuables, or made a will or advance care, told a friend or changed your will, and yourself, tried to harm yourself, etc.			

**Any YES must be taken seriously. Seek help from friends, co-workers, chaplain and inform your supervisor/other member in YOUR chain of command as soon as possible.**

If the answer to 4, 5 or 6 is YES, immediately ESCORT the Sailor to the nearest Chaplain, Mental Health Provider, Unit leader or Emergency Department.

**Military Crisis Line**  
1-800-273-8255

Answer Questions 1 and 2		In The Past Month
	YES	NO
1) Have you wished you were dead or wished you could go to sleep and not wake up?		
2) Have you actually had any thoughts about killing yourself?		
If YES to #2, answer questions 3, 4, 5 and 6. If NO to 2, go directly to question 6		
3) Have you thought about how you might do this?		
4) Have you had any intention of acting on these thoughts of killing yourself, as opposed to you have the thoughts but you definitely would not act on them?		
5) Have you started to work out or worked out the details of how to kill yourself? Do you intend to carry out this plan?		
Always Ask Question 6		In the Past 3 Months
6) Have you done anything, started to do anything, or prepared to do anything to end your life? <i>Examples: Collected pills, obtained a gun, gave away valuables, wrote a will or suicide note, held a gun but changed your mind, cut yourself, tried to hang yourself, etc.</i>		
Any YES must be taken seriously. Seek help from friends, family, co-workers, and inform them as soon as possible. If the answer to 4, 5 or 6 is YES, immediately ESCORT the individual to Emergency Personnel for Care. DON'T LEAVE THEM ALONE.		
<p>STAY ENGAGED UNTIL YOU MAKE A WARM HAND OFF TO SOMEONE WHO CAN HELP.</p> <p>1-800-273-TALK (8255) suicidepreventionlifeline.org</p>		

Haga las preguntas 1 y 2.		1 mes pasado
	SI	NO
1) ¿Ha deseado estar muerto(a) o poder dormirse y no despertar?		
2) ¿Ha tenido realmente la idea de suicidarse?		
Si la respuesta es "SI" a la pregunta 2, formule las preguntas 3, 4, 5, y 6. Si la respuesta es "No" continúe a la pregunta 6.		
3) ¿Ha pensado en cómo llevaría esto a cabo?		
4) ¿Ha tenido estas ideas y un cierto grado la intención de llevarlas a cabo?		
5) ¿Ha comenzado a elaborar o ha elaborado los detalles sobre cómo suicidarse? ¿Tiene intenciones de llevar a cabo este plan?		
Siempre pregunta 6		Pasado 3 Meses
6) ¿Ha hecho algo usual, comenzado a hacer algo o se ha preparado para hacer algo para terminar su vida? <i>Ejemplos: Colectar píldoras, obtener una arma, regalar cosas de valor, escribir un testamento o carta de suicidio, sacado píldoras de la botella pero no las tragado, agarrar una arma pero ha cambiado de mente de usarla o alguien se la ha quitado de sus manos, ha subido al techo pero no ha saltado al vacío, o vestido ha tomado píldoras, ha tratado de disparar una arma, se ha cortado, ha tratado de colgarse, etc.</i>		

**Cualquier Sí debe tomarse en serio. Busque ayuda de amigos, familiares, compañeros de trabajo e informe los antes posible.**

La respuesta a 4, 5 o 6 es SÍ, Acompañar inmediatamente al individuo al personal de emergencia. NO LOS DEJAS SOLO.

# Linking of Systems: Organizational Vision/Top-Down Models

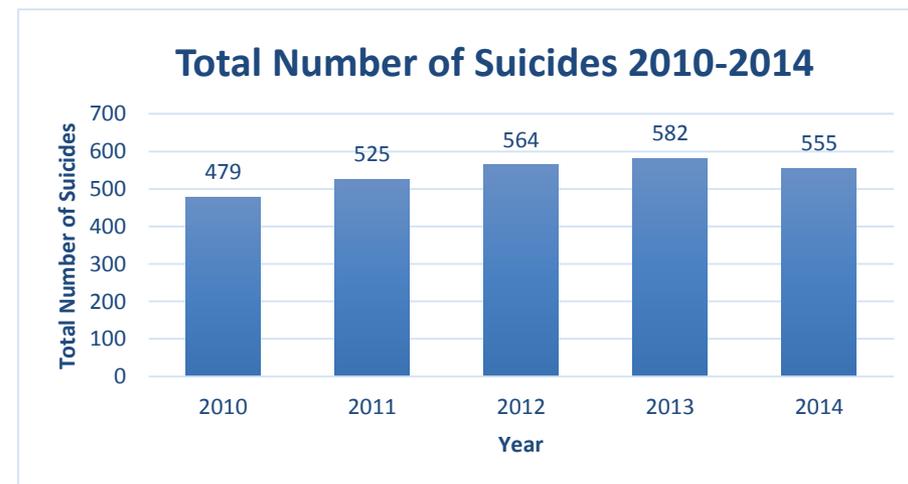

# Since Asking With An Everyone, Everywhere Approach Utah Achieves Decrease in Suicide

Reversed an alarming increasing trend over the past 10 years

A former **Nevada Senator** grappled with her state's suicide rate and looked to progress made in Utah for hope, saying :

“Utah recently **reversed an upward trend** in suicides and experts are citing the **implementation of the C-SSRS.**”

## State Suicide Prevention Programs FY 2015 Report

# Need to Ask: Screen and Monitor Like We Do for Blood Pressure

- **45%** of all people and **58%** of older adults who die by suicide see their **primary care** doctor in the **month** before they die (Luoma et al., 2002)
- Many adolescent attempters in the ER do not present for psychiatric reasons (King et al., 2009)
- 25% of all people who die by suicide are seen in ER in past 12 months for non-psychiatric reasons (Gairin et al., 2003)

**A GREAT OPPORTUNITY FOR  
PREVENTION !**

**If we ask we can find them!!**

# Screening Programs are Successful

- High school **screening identified 69% of the students with significant mental health issues** compared to clinical professionals who identified only 48%. **When both screening and professional referral were used 82% were identified** (Scott et al., 2009)
- College Screening Project - data suggest that screening brings high-risk students into treatment
  - Only **1 suicide in 4 years post-screening** vs. 3 suicides in 4 years pre-screening program (Haas et al., 2008)
- Meta-analysis concluded that **screening results in lower suicide rates in adults** (Mann et al., JAMA 2005)
- Elderly primary care screenings - **118% increase in rates of detection and diagnosis of depression** (Callahan et al., 1996)

# First-Ever Universal Screening uses the C-SSRS at Parkland Memorial Hospital and Finds only 1.8% of 100,000 Patients

Parkland

- Screening all patient encounters: “We believe that it’s important to screen everyone because some of this risk may go undetected in a patient who presents for treatment of non-psychiatric symptoms.” (Dr. Kimberly Roaten, Department of Psychiatry)
- Specialized algorithm in electronic health record that triggers appropriate clinical intervention based on patient answers to C-SSRS questions
- Dedicated Resources including 12 psychiatric social workers and a behavioral health team

“When suicidal behaviors are detected early, lives can be saved.... even within the first few days of implementing the screening program, we were able to intervene with patients at high risk.”

Dr. Celeste Johnson, Director of Nursing

New York State  
Psychiatric Institute

COLUMBIA UNIVERSITY  
Department of Psychiatry

# Joint Commission promotes the C-SSRS

“The research shows that **this tool** will help organizations **focus on folks who are at highest risk.**”

- Anne Bauer, MD, field director,  
Accreditation and Certification  
Operations, The Joint Commission.

[Hospitals and health care systems] have either developed something themselves or they're using a piecemeal approach, with different tools in different departments: What may appear to be a person at risk in one area may not appear to be at risk in another. **When the ED is asking their set of questions, and then the social worker asks another set, then the psychiatrist asks another, you're reducing the signal strength. You're not honing in on the needle in the haystack.**

New York State  
Psychiatric Institute

COLUMBIA UNIVERSITY  
Department of Psychiatry

# TRAINING ON THE C-SSRS

# C-SSRS is Simply....

## Ideation Severity

## Behaviors

SUICIDAL IDEATION		Lifetime: Time He/She Felt Most Suicidal
Ask questions 1 and 2. If both are negative, proceed to "Suicidal Behavior" section. If the answer to question 2 is "yes", ask questions 3, 4 and 5. If the answer to question 1 and/or 2 is "yes", complete "Intensity of Ideation" section below.		
<b>1. Wish to be Dead</b> Subject endorses thoughts about a wish to be dead or not alive anymore, or wish to fall asleep and not wake up. <i>Have you wished you were dead or wished you could go to sleep and not wake up?</i> If yes, describe:	Yes No <input type="checkbox"/> <input type="checkbox"/>	
<b>2. Non-Specific Active Suicidal Thoughts</b> General, non-specific thoughts of wanting to end one's life/commit suicide (e.g., "I've thought about killing myself") without thoughts of ways to kill oneself/associated methods, intent, or plan. <i>Have you actually had any thoughts of killing yourself?</i> If yes, describe:	Yes No <input type="checkbox"/> <input type="checkbox"/>	
<b>3. Active Suicidal Ideation with Any Methods (Not Plan) without Intent to Act</b> Subject endorses thoughts of suicide and has thought of at least one method during the assessment period. This is different than a specific plan with time, place or method details worked out (e.g., thought of method to kill self but not a specific plan). Includes person who would say, "I thought about taking an overdose but I never made a specific plan as to when, where or how I would actually do it...and I would never go through with it." <i>Have you been thinking about how you might do this?</i> If yes, describe:	Yes No <input type="checkbox"/> <input type="checkbox"/>	
<b>4. Active Suicidal Ideation with Some Intent to Act, without Specific Plan</b> Active suicidal thoughts of killing oneself and subject reports having some intent to act on such thoughts, as opposed to "I have the thoughts but I definitely will not do anything about them." <i>Have you had these thoughts and had some intention of acting on them?</i> If yes, describe:	Yes No <input type="checkbox"/> <input type="checkbox"/>	
<b>5. Active Suicidal Ideation with Specific Plan and Intent</b> Thoughts of killing oneself with details of plan fully or partially worked out and subject has some intent to carry it out. <i>Have you started to work out or worked out the details of how to kill yourself? Do you intend to carry out this plan?</i> If yes, describe:	Yes No <input type="checkbox"/> <input type="checkbox"/>	
INTENSITY OF IDEATION		
The following features should be rated with respect to the most severe type of ideation (i.e., 1-5 from above, with 1 being the least severe and 5 being the most severe). Ask about time he/she was feeling the most suicidal.		
Most Severe Ideation: _____	Most Severe	
<b>Frequency</b> <i>How many times have you had these thoughts?</i> (1) Less than once a week (2) Once a week (3) 2-5 times in week (4) Daily or almost daily (5) Many times each day	_____	
<b>Duration</b> <i>When you have the thoughts, how long do they last?</i> (1) Flucting - few seconds or minutes (2) Less than 1 hour/some of the time (3) 1-4 hour's lot of time (4) 4-8 hours/most of day (5) More than 8 hours/peristent or continuous	_____	
<b>Controllability</b> <i>Could/can you stop thinking about killing yourself or wanting to die if you want to?</i> (1) Easily able to control thoughts (2) Can control thoughts with little difficulty (3) Can control thoughts with some difficulty (4) Can control thoughts with a lot of difficulty (5) Unable to control thoughts (6) Does not attempt to control thoughts	_____	
<b>Deterrants</b> <i>Are there things - anyone or anything (e.g., family, religion, pain of death) - that stopped you from wanting to die or acting on thoughts of committing suicide?</i> (1) Deterrants definitely stopped you from attempting suicide (2) Deterrants probably stopped you (3) Uncertain that deterrants stopped you (4) Deterrants most likely did not stop you (5) Deterrants definitely did not stop you (6) Does not apply	_____	
<b>Reasons for Ideation</b> <i>What sort of reasons did you have for thinking about wanting to die or killing yourself? Was it to end the pain or stop the way you were feeling (in other words you couldn't go on living with this pain or how you were feeling) or was it to get attention, revenge or a reaction from others? Or both?</i> (1) Completely to get attention, revenge or a reaction from others (2) Mostly to get attention, revenge or a reaction from others (3) Equally to get attention, revenge or a reaction from others and to end/stop the pain. (4) Mostly to end or stop the pain (you couldn't go on living with the pain or how you were feeling) (5) Completely to end or stop the pain (you couldn't go on living with the pain or how you were feeling) (6) Does not apply	_____	

SUICIDAL BEHAVIOR		(Check all that apply, so long as these are separate events; must ask about all types)		Lifetime	
<b>Actual Attempt:</b> A potentially self-injurious act committed with at least some wish to die, as a result of act. Behavior was in part thought of as method to kill oneself. Intent does not have to be 100%. If there is any intent/desire to die associated with the act, then it can be considered an actual suicide attempt. <i>There does not have to be any injury or harm, just the potential for injury or harm.</i> If person pulls trigger while gun is in mouth but gun is broken so no injury results, this is considered an attempt. Inferring Intent: Even if an individual denies intent/wish to die, it may be inferred clinically from the behavior or circumstances. For example, a highly lethal act that is clearly not an accident so no other intent but suicide can be inferred (e.g., gunshot to head, jumping from window of a high floor/story). Also, if someone denies intent to die, but they thought that what they did could be lethal, intent may be inferred. <i>Have you made a suicide attempt?</i> <i>Have you done anything to harm yourself?</i> <i>Have you done anything dangerous where you could have died?</i> <i>What did you do?</i> <i>Did you _____ as a way to end your life?</i> <i>Did you want to die (even a little) when you _____?</i> <i>Were you trying to end your life when you _____?</i> <i>Or did you think it was possible you could have died from _____?</i> <i>Or did you do it purely for other reasons / without ANY intention of killing yourself (like to relieve stress, feel better, get sympathy, or get something else to happen)?</i> (Self-Injurious Behavior without suicidal intent) If yes, describe:					Yes No <input type="checkbox"/> <input type="checkbox"/>
<b>Has subject engaged in Non-Suicidal Self-Injurious Behavior?</b> <b>Interrupted Attempt:</b> When the person is interrupted (by an outside circumstance) from starting the potentially self-injurious act (if not for that, actual attempt would have occurred). Warning: Person has pills in hand but is stopped from ingesting. Once they ingest any pills, this becomes an attempt rather than an interrupted attempt. Shooting: Person has gun pointed toward self, gun is taken away by someone else, or is somehow prevented from pulling trigger. Once they pull the trigger, even if the gun fails to fire, it is an attempt. Jumping: Person is poised to jump, is grabbed and taken down from ledge. Hanging: Person has noose around neck but has not yet started to hang - is stopped from doing so. <i>Has there been a time when you started to do something to end your life but someone or something stopped you before you actually did anything?</i> If yes, describe:					Total # of Attempts _____ Yes No <input type="checkbox"/> <input type="checkbox"/>
<b>Aborted Attempt:</b> When person begins to take steps toward making a suicide attempt, but stops themselves before they actually have engaged in any self-destructive behavior. Examples are similar to interrupted attempts, except that the individual stops him/herself, instead of being stopped by something else. <i>Has there been a time when you started to do something to try to end your life but you stopped yourself before you actually did anything?</i> If yes, describe:					Total # of Interrupted _____ Yes No <input type="checkbox"/> <input type="checkbox"/>
<b>Preparatory Acts or Behavior:</b> Acts or preparation towards imminently making a suicide attempt. This can include anything beyond a verbalization or thought, such as assembling a specific method (e.g., buying pills, purchasing a gun) or preparing for one's death by suicide (e.g., giving things away, writing a suicide note). <i>Have you taken any steps towards making a suicide attempt or preparing to kill yourself (such as collecting pills, getting a gun, giving valuables away or writing a suicide note)?</i> If yes, describe:					Total # of Aborted _____ Yes No <input type="checkbox"/> <input type="checkbox"/>
<b>Suicidal Behavior:</b> Suicidal behavior was present during the assessment period?					Yes No <input type="checkbox"/> <input type="checkbox"/>
<b>Answer for Actual Attempts Only</b>					
		Most Recent Attempt Date:	Most Lethal Attempt Date:	Initial/First Attempt Date:	
<b>Actual Lethality/Medical Damage:</b>					
0. No physical damage or very minor physical damage (e.g., surface scratches).		Enter Code	Enter Code	Enter Code	
1. Minor physical damage (e.g., lacerative speech, first-degree burns, mild bleeding, sprains).		_____	_____	_____	
2. Moderate physical damage, medical attention needed (e.g., conscious but sleepy, somewhat responsive, second-degree burns, bleeding of major vessels).		_____	_____	_____	
3. Moderately severe physical damage, medical hospitalization and likely intensive care required (e.g., comatose with reflexes intact, third-degree burns less than 20% of body, extensive blood loss but can recover, major fractures).		_____	_____	_____	
4. Severe physical damage, medical/hospitalization with intensive care required (e.g., comatose without reflexes; third-degree burns over 20% of body, extensive blood loss with unstable vital signs; major damage to a vital area).		_____	_____	_____	
5. Death		_____	_____	_____	
<b>Potential Lethality: Only Answer if Actual Lethality=0</b> Likely lethality of actual attempt if no medical damage (the following examples, while having no actual medical damage, had potential for very serious lethality: put gun in mouth and pulled the trigger but gun fails to fire so no medical damage; lying on train tracks with oncoming train but pulled away before run over).					
0 = Behavior not likely to result in injury		Enter Code	Enter Code	Enter Code	
1 = Behavior likely to result in injury but not likely to cause death		_____	_____	_____	
2 = Behavior likely to result in death despite available medical care		_____	_____	_____	

## Ideation Intensity

## Lethality of Actual Suicide Attempts

# C-SSRS is Simply....

## Assessment of Suicidal Ideation and Suicidal Behavior

- Ideation Severity - 1-5 rating, of increasing severity from a wish to die to an active thought of killing oneself with plan and intent (Full and Screener C-SSRS)
- Ideation Intensity – 5 intensity items (Full C-SSRS Only)
- Behaviors - All relevant behaviors assessed and all items include **definitions** for each term and **standardized questions for each category** are included to guide the interviewer for facilitating improved identification (Full and Screener C-SSRS)
- Lethality of Actual Suicide Attempts (Full C-SSRS Only)

## C-SSRS is a Semi-structured Interview

- Questions are provided as helpful tools – **it is not required to ask any or all questions** – just enough to get the appropriate answer
- Most important: gather enough clinical information to determine whether to call something suicidal or not

# Multiple Sources :

## *Don't Have to Rely on Individual's Report*

- Most of time person will give you relevant info, but when indicated.....
- Allows for utilization of **multiple sources** of information
  - Any source of information that gets you the most clinically meaningful response (subject, family members/caregivers, records)
- Very helpful for children and adolescents who may not give same info as parents or other caregivers

# Examples...

- A peer comes to your office and reports that his friend posted on Instagram that he wants to die.
- A loved one brings a family member into the ER. The patient denies suicidal thoughts, but the family member shares with you that the he has been talking about suicide for the past two weeks and wrote a note yesterday and that is why he is here in the ER.
- Client is at intake for outpatient services and denies lifetime suicidal ideation and behavior but medical record sent from inpatient hospital indicates admission for recent attempt.

# C-SSRS Screener Ideation Questions

COLUMBIA-SUICIDE SEVERITY RATING SCALE  
Screen Version

SUICIDE IDEATION DEFINITIONS AND PROMPTS	Past month	
	YES	NO
<b>Ask questions that are bolded and underlined.</b>		
<b>Ask Questions 1 and 2</b>		
<b>1) Wish to be Dead:</b> Person endorses thoughts about a wish to be dead or not alive anymore, or wish to fall asleep and not wake up.  <u><b>Have you wished you were dead or wished you could go to sleep and not wake up?</b></u>		
<b>2) Suicidal Thoughts:</b> General non-specific thoughts of wanting to end one's life/commit suicide, "I've thought about killing myself" without general thoughts of ways to kill oneself/associated methods, intent, or plan.  <u><b>Have you actually had any thoughts of killing yourself?</b></u>		
<b>If YES to 2, ask questions 3, 4, 5, and 6. If NO to 2, go directly to question 6.</b>		
<b>3) Suicidal Thoughts with Method (without Specific Plan or Intent to Act):</b> Person endorses thoughts of suicide and has thought of a least one method during the assessment period. This is different than a specific plan with time, place or method details worked out. "I thought about taking an overdose but I never made a specific plan as to when where or how I would actually do it...and I would never go through with it."  <u><b>Have you been thinking about how you might do this?</b></u>		
<b>4) Suicidal Intent (without Specific Plan):</b> Active suicidal thoughts of killing oneself and patient reports having <u>some intent to act on such thoughts</u> , as opposed to "I have the thoughts but I definitely will not do anything about them."  <u><b>Have you had these thoughts and had some intention of acting on them?</b></u>		
<b>5) Suicide Intent with Specific Plan:</b> Thoughts of killing oneself with details of plan fully or partially worked out and person has some intent to carry it out.  <u><b>Have you started to work out or worked out the details of how to kill yourself? Do you intend to carry out this plan?</b></u>		

Psychosis: Auditory hallucinations count as suicidal ideation

# Each Type of Ideation Severity Confers Increasingly Greater Risk

History of Lifetime Suicidal Ideation at Study Start	All Patients N=8837 OR (95% CI)	Psychiatric Patients N=6760 OR (95% CI)
No Ideation Reported	0.8% incidence rate N=4975	1.1% incidence rate N = 3184
Wish to Be Dead	6.21 (4.18 – 9.23)*** N=1491	4.99 (3.29 – 7.56)*** N = 1351
Non-Specific Active Suicidal Thoughts	6.69 (4.16 – 10.76)*** N=635	5.53 (3.38 – 9.04)*** N = 568
Active Suicidal Ideation with Any Methods (Not Plan), without Intent to Act	11.16 (7.43 – 16.76)*** N=775	8.36(5.44 – 12.84)*** N = 725
Active Suicidal Ideation with Some Intent to Act, without Specific Plan	19.27 (12.97 – 28.63)*** N=581	15.24 (10.07 – 23.09)*** N = 545
Active Suicidal Ideation with Specific Plan and Intent	25.53 (16.94 – 38.47)*** N=398	18.70 (12.16 – 28.76)*** N = 387

# Ideation Severity Demo

NEW YORK  
STATE OF  
OPPORTUNITY.

New York State  
Psychiatric Institute

COLUMBIA UNIVERSITY  
Department of Psychiatry

<http://youtu.be/2kpB3Tq2mgU>

# Method or Plan?

The patient reported that he first started thinking about killing himself when he was 12. He thought about how easy it would be to pretend to fall in front of a bus before it was able to stop so that it would look like an accident. Although he thought about it often, he said he did not have the courage to do it.

1. Suicidal ideation with plan (Question 5)
2. Suicidal ideation with method (Question 3)

# Intensity of Ideation

Once most severe type of ideation is determined, a few follow-up questions are asked

- Frequency
- Duration
- Controllability
- Deterrents
- Reasons for ideation (stop the pain or make something else happen)

NEW YORK  
STATE OF  
OPPORTUNITY.

New York State  
Psychiatric Institute

Two overlapping forms from the New York State Psychiatric Institute. The top form is a 'Patient History' form with a yellow highlight on the 'History of Present Illness' section. The bottom form is a 'Mental Status Exam' form with a yellow highlight on the 'Thoughts' section. Both forms contain various fields for patient information, clinical observations, and assessment results.

# INTENSITY OF IDEATION

The following features should be rated with respect to the most severe type of ideation (i.e., 1-5 from above, with 1 being the least severe and 5 being the most severe).

Most Severe Ideation: \_\_\_\_\_

Most Severe

Type # (1-5)

Description of Ideation

## Frequency

How many times have you had these thoughts?

- (1) Less than once a week (2) Once a week (3) 2-5 times in week (4) Daily or almost daily (5) Many times each day

\_\_\_\_\_

## Duration

When you have the thoughts, how long do they last?

- (1) Fleeting - few seconds or minutes (2) Less than 1 hour/some of the time (3) 1-4 hours/a lot of time (4) 4-8 hours/most of day (5) More than 8 hours/persistent or continuous

\_\_\_\_\_

## Controllability

Could/can you stop thinking about killing yourself or wanting to die if you want to?

- (1) Easily able to control thoughts (2) Can control thoughts with little difficulty (3) Can control thoughts with some difficulty (4) Can control thoughts with a lot of difficulty (5) Unable to control thoughts (0) Does not attempt to control thoughts

\_\_\_\_\_

## Deterrents

Are there things - anyone or anything (e.g., family, religion, pain of death) - that stopped you from wanting to die or acting on thoughts of suicide?

- (1) Deterrents definitely stopped you from attempting suicide (2) Deterrents probably stopped you (3) Uncertain that deterrents stopped you (4) Deterrents most likely did not stop you (5) Deterrents definitely did not stop you (0) Does not apply

\_\_\_\_\_

## Reasons for Ideation

What sort of reasons did you have for thinking about wanting to die or killing yourself? Was it to end the pain or stop the way you were feeling (in other words you couldn't go on living with this pain or how you were feeling) or was it to get attention, revenge or a reaction from others? Or both?

- (1) Completely to get attention, revenge or a reaction from others (2) Mostly to get attention, revenge or a reaction from others (3) Equally to get attention, revenge or a reaction from others and to end/stop the pain (4) Mostly to end or stop the pain (you couldn't go on living with the pain or how you were feeling) (5) Completely to end or stop the pain (you couldn't go on living with the pain or how you were feeling) (0) Does not apply

\_\_\_\_\_

# INTENSITY OF IDEATION

The following features should be rated with respect to the most severe type of ideation (i.e., 1-5 from above, with 1 being the least severe and 5 being the most severe).

Most Severe

**Most Severe Ideation:** \_\_\_\_\_  
 Type # (1-5) Description of Ideation

**Frequency**  
*How many times have you had these thoughts?*

**Duration**  
*When you have the thoughts, how long do they last?*  
 (1) Fleeting - few seconds or minutes (4) 4-8 hours/most of day  
 (2) Less than 1 hour/some of the time (5) More than 8 hours/persistent or continuous  
 (3) 1-4 hours/a lot of time

**Controllability**  
*Could/can you stop thinking about killing yourself or wanting to die if you want to?*  
 (1) Easily able to control thoughts (4) Can control thoughts with a lot of difficulty  
 (2) Can control thoughts with little difficulty (5) Unable to control thoughts  
 (3) Can control thoughts with some difficulty (0) Does not attempt to control thoughts

**Deterrents**  
*Are there things - anyone or anything (e.g., family, religion, pain of death) - that stopped you from wanting to die or acting on thoughts of suicide?*  
 (1) Deterrents definitely stopped you from attempting suicide (4) Deterrents most likely did not stop you  
 (2) Deterrents probably stopped you (5) Deterrents definitely did not stop you  
 (3) Uncertain that deterrents stopped you (0) Does not apply

**Reasons for Ideation**  
*What sort of reasons did you have for thinking about wanting to die or killing yourself? Was it to end the pain or stop the way you were feeling (in other words you couldn't go on living with this pain or how you were feeling) or was it to get attention, revenge or a reaction from others? Or both?*  
 (1) Completely to get attention, revenge or a reaction from others (4) Mostly to end or stop the pain (you couldn't go on living with the pain or how you were feeling)  
 (2) Mostly to get attention, revenge or a reaction from others (5) Completely to end or stop the pain (you couldn't go on living with the pain or how you were feeling)  
 (3) Equally to get attention, revenge or a reaction from others and to end/stop the pain (0) Does not apply

# INTENSITY OF IDEATION

The following features should be rated with respect to the most severe type of ideation (i.e., 1-5 from above, with 1 being the least severe and 5 being the most severe).

Most Severe

**Most Severe Ideation:** \_\_\_\_\_

Type # (1-5)

Description of Ideation

## Frequency

How many times have you had these thoughts?

- (1) Less than once a week (2) Once a week (3) 2-5 times in week (4) Daily or almost daily (5) Many times each day

## Duration

When you have the thoughts, how long do they last?

- (1) Fleeting - few seconds or minutes (2) Less than 1 hour/some of the time (3) 1-4 hours/a lot of time (4) 4-8 hours/most of day (5) More than 8 hours/persistent or continuous

## Controllability

Could/can you stop thinking about killing yourself or wanting to die if you want to?

- (1) Easily able to control thoughts (2) Can control thoughts with little difficulty (3) Can control thoughts with some difficulty (4) Can control thoughts with a lot of difficulty (5) Unable to control thoughts (0) Does not attempt to control thoughts

## Deterrents

Are there things - anyone or anything (e.g., family, religion, pain of death) - that stopped you from wanting to die or acting on thoughts of suicide?

- (1) Deterrents definitely stopped you from attempting suicide (2) Deterrents probably stopped you (3) Uncertain that deterrents stopped you (4) Deterrents most likely did not stop you (5) Deterrents definitely did not stop you (0) Does not apply

## Reasons for Ideation

What sort of reasons did you have for thinking about wanting to die or killing yourself? Was it to end the pain or stop the way you were feeling (in other words you couldn't go on living with this pain or how you were feeling) or was it to get attention, revenge or a reaction from others? Or both?

- (1) Completely to get attention, revenge or a reaction from others (2) Mostly to get attention, revenge or a reaction from others (3) Equally to get attention, revenge or a reaction from others and to end/stop the pain (4) Mostly to end or stop the pain (you couldn't go on living with the pain or how you were feeling) (5) Completely to end or stop the pain (you couldn't go on living with the pain or how you were feeling) (0) Does not apply

# Clinical Guidance

For Intensity of Ideation, risk is greater when:

- Thoughts are more frequent
  - Thoughts are of longer duration
  - Thoughts are less controllable
  - Fewer deterrents to acting on thoughts
  - Stopping the pain is the reason
- Gives you a 2-25 score that will help inform clinical judgment about risk
  - **Duration found to be most predictive in adolescents (King, 2009)**

A screenshot of a clinical assessment form, likely a risk assessment tool. The form is divided into several sections with headings such as "CLINICAL HISTORY", "RISK ASSESSMENT", and "CLINICAL JUDGMENT". It contains various checkboxes, text boxes, and numerical scales. The "RISK ASSESSMENT" section is highlighted in yellow. The form is densely packed with text and includes a "TOTAL SCORE" field at the bottom right.

# Full C-SSRS Suicidal Behavior Section

<b>SUICIDAL BEHAVIOR</b> (Check all that apply, so long as there are separate events; must ask about all types.)	<b>Lifetime</b>	<b>Past 3 months</b>
<p><b>Actual Attempt:</b> A potentially self-injurious act committed with at least some wish to die, as a result of <i>suicidal</i> behavior was in part thought of as a method to kill oneself. Intent does not have to be 100%. If there is ANY intent/desire to die associated with the act, then it can be considered an actual suicide attempt. There does not have to be any injury or harm, just the potential for injury or harm. If person pulls trigger while gun is in mouth but gun is broken so no injury results, this is considered an attempt. Inferring intent: Even if an individual denies intent with to die, it may be inferred clinically from the behavior or circumstances. For example, a lightly lethal act that is clearly not an accident so no other intent but suicide can be inferred (e.g., gunshot to head, jumping from window of a high floor story). Also, if someone decides later to die, but they thought that what they did could be lethal, intent may be inferred. <i>Have you made a suicide attempt?</i> <i>Have you done anything to harm yourself?</i> <i>Have you done anything dangerous where you could have died?</i> <i>What did you do?</i> <i>Did you _____ as a way to end your life?</i> <i>Did you want to die (even a little) when you _____?</i> <i>Were you trying to end your life when you _____?</i> <i>Or Did you think it was possible you could have died from _____?</i> <i>Or did you do it purely for other reasons / without ANY intention of killing yourself (like to relieve stress, feel better, get sympathy, or get something else to happen)? (Self-injurious Behavior without suicidal intent)</i> If yes, describe:</p>	<p>Yes No <input type="checkbox"/> <input type="checkbox"/></p> <p>Total # of Attempts _____</p>	<p>Yes No <input type="checkbox"/> <input type="checkbox"/></p> <p>Total # of Attempts _____</p>
<p><b>Has subject engaged in Non-Suicidal Self-Injury Behavior?</b></p>	<p>Yes No <input type="checkbox"/> <input type="checkbox"/></p>	<p>Yes No <input type="checkbox"/> <input type="checkbox"/></p>
<p><b>Interrupted Attempt:</b> When the person is interrupted (by an outside circumstance) from starting the potentially self-injurious act (<i>if not for that, actual attempt would have occurred</i>). Overdose: Person has pills in hand but it stopped from ingesting. Once they ingest any pills, this becomes an attempt rather than an interrupted attempt. Shooting: Person has gun pointed toward self, gun is taken away by someone else, or is somehow prevented from pulling trigger. Once they pull the trigger, even if the gun fails to fire, it is an attempt. Jumping: Person is poised to jump, is grabbed and taken down from ledge. Hanging: Person has noose around neck but has not yet started to hang - is stopped from doing so. <i>Has there been a time when you started to do something to end your life but someone or something stopped you before you actually did anything?</i> If yes, describe:</p>	<p>Yes No <input type="checkbox"/> <input type="checkbox"/></p> <p>Total # of Interrupted _____</p>	<p>Yes No <input type="checkbox"/> <input type="checkbox"/></p> <p>Total # of Interrupted _____</p>
<p><b>Aborted or Self-Interrupted Attempt:</b> When person begins to take steps toward making a suicide attempt, but stops themselves before they actually have engaged in any self-destructive behavior. Examples are similar to interrupted attempt, except that the individual stops him/herself, instead of being stopped by something else. <i>Has there been a time when you started to do something to try to end your life but you stopped yourself before you actually did anything?</i> If yes, describe:</p>	<p>Yes No <input type="checkbox"/> <input type="checkbox"/></p> <p>Total # of aborted or self-interrupted _____</p>	<p>Yes No <input type="checkbox"/> <input type="checkbox"/></p> <p>Total # of aborted or self-interrupted _____</p>
<p><b>Preparatory Acts or Behavior:</b> Act or preparation towards imminently making a suicide attempt. This can include anything beyond a verbalization or thought, such as assembling a specific method (e.g., buying pills, purchasing a gun) or preparing for one's death by suicide (e.g., giving things away, writing a suicide note). <i>Have you taken any steps towards making a suicide attempt or preparing to kill yourself (such as collecting pills, getting a gun, giving valuables away or writing a suicide note)?</i> If yes, describe:</p>	<p>Yes No <input type="checkbox"/> <input type="checkbox"/></p> <p>Total # of preparatory acts _____</p>	<p>Yes No <input type="checkbox"/> <input type="checkbox"/></p> <p>Total # of preparatory acts _____</p>

# Data Supports Importance of Full Range:

All Lifetime Suicidal Behaviors Predict Suicidal Behavior

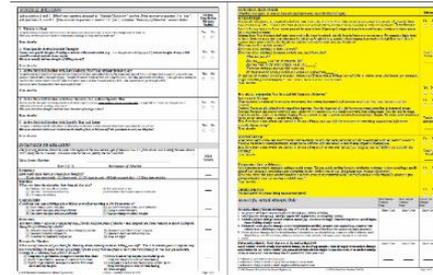

<b>Behavior reported at baseline</b>	<b>Patients not prospectively reporting suicidal behavior</b>	<b>Patients prospectively reporting suicidal behavior</b>	<b>Odds ratio of prospective suicidal behavior report (95% CI; *** <i>p-values</i> &lt; .001)</b>
<b>Actual Attempt</b>	522 (85.6 %)	88 (14.4 %)	4.56 (3.40 – 6.11)***
<b>Interrupted Attempt</b>	349 (82.7 %)	73 (17.3 %)	5.28 (3.88 – 7.18)***
<b>Aborted Attempt</b>	461 (84.7 %)	83 (15.3 %)	4.75 (3.53 – 6.40)***
<b>Preparatory Behavior</b>	177 (81.2 %)	41 (18.8 %)	4.92 (3.38 – 7.16)***

A person reporting any one of the lifetime behaviors at baseline is ~5X more likely to prospectively report a behavior during subsequent follow-up

# Suicide Attempt Definition

A self-injurious **act** undertaken with at least **some** intent to die, **as a result of** the act

- There does not have to be any injury or harm, just the **potential** for injury or harm (e.g., gun failing to fire)
- Any “non-zero” intent to die – does not have to be 100%
- Intent and behavior **must** be linked

The image shows a screenshot of a medical record or form. The right side of the page is highlighted in yellow, indicating a specific section of interest. The text is dense and appears to be a clinical or administrative document.

# Inferring Intent

## Importance of Inference

- Intent can sometimes be inferred clinically from the behavior or circumstances
  - e.g., if someone denies intent to die, but they thought that what they did could be lethal, intent can be inferred
  - “Clinically impressive” circumstances; highly lethal act where no other intent but suicide can be inferred (e.g., gunshot to head, jumping from window of a high floor/story, setting self on fire, or taking 200 pills)

Two screenshots of a clinical form, likely a psychiatric assessment or medical history. The left screenshot shows a form with various sections and checkboxes, some of which are highlighted in yellow. The right screenshot shows a similar form with a large yellow highlight covering a significant portion of the text, possibly indicating a specific area of interest or a warning.

# Suicide Attempt

- A suicide attempt begins with the first pill swallowed or scratch with a knife
- **Questions:**
  - **Have you made a suicide attempt?**
  - **Have you done anything to harm yourself?**
  - **Have you done anything dangerous where you could have died?**

The image shows two overlapping screenshots of a medical chart or form. The left screenshot is a standard white document with various fields and text. The right screenshot is a yellow document, likely a copy of the same or a related form, with some text highlighted in yellow. The text is too small to read clearly but appears to be a structured form with sections and checkboxes.

# As Opposed To Non-suicidal Self-injurious Behavior

- Engaging in behavior PURELY (100%) for reasons other than to end one's life:
  - Either to affect:
    - Internal state (feel better, relieve pain etc.) - “self-mutilation”
    - **and/or** -
    - External circumstances (get sympathy, attention, make angry, etc.)

NEW YORK  
STATE OF  
OPPORTUNITY.

New York State  
Psychiatric Institute

Two screenshots of a clinical record system. The left screenshot shows a patient's history and physical examination notes. The right screenshot shows a patient's mental status examination notes, with a yellow highlight on the text: "The patient is a 32-year-old male with a history of major depressive disorder, bipolar disorder, and anxiety disorder. He is currently on medication and is being evaluated for a possible relapse of his depression." The right screenshot also shows a table with columns for "Date", "Time", "Location", and "Status".

# Suicide Attempt? Yes or No

The patient wanted to escape from her mother's home. She researched lethal doses of ibuprofen. She took 6 ibuprofen pills and said she felt certain from her research that this amount was not enough to kill her. She stated she did not want to die, only to escape from her mother's home. She was taken to the emergency room where her stomach was pumped and she was admitted to a psychiatric ward.

1. Yes

2. No

3. Not enough information

# Suicide Attempt? Yes or No

Young woman, following a fight with her boyfriend, felt like she wanted to die, impulsively took a kitchen knife and made a superficial scratch to her wrist; before she actually punctured the skin or bled, however, she changed her mind and stopped.

1. Yes

2. No

3. Not enough information

# Suicide Attempt? Yes or No

Patient was feeling ignored. She went into the family kitchen where mother and sister were talking. She took a knife out of the drawer and made a cut on her arm. She denied that she wanted to die at all (“not even a little”) but just wanted them to pay attention to her.

1. Yes

2. No

3. Not enough information

# Suicide Attempt? Yes or No

The patient cut her wrists after an argument with her boyfriend.

1. Yes

2. No

3. Not enough information

# Suicide Attempt? Yes or No

Had a big fight with her ex-husband about her stepson. Took 15-20 imipramine tablets and went to bed. Slept all night and until 4-5 pm the next day. States she couldn't stand up or walk. Called EMS – taken to the ER – drank charcoal and admitted to hospital. Unable to verbalize clear intent, but states she was well aware of the dangers of TCA overdose and the potential for death.

1. Yes

2. No

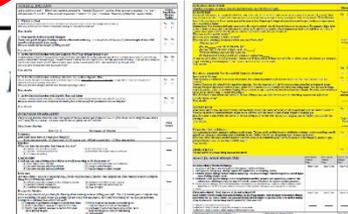

3. Not enough information

# Suicidal Behavior – Actual Attempts

<b>SUICIDAL BEHAVIOR</b> <i>(Check all that apply, so long as these are separate events; must ask about all types)</i>	Since Last Visit												
<p><b>Actual Attempt:</b> A potentially self-injurious act committed with at least some wish to die, <i>as a result of act</i>. Behavior was in part thought of as method to kill oneself. Intent does not have to be 100%. If there is <i>any</i> intent/desire to die associated with the act, then it can be considered an actual suicide attempt. <i>There does not have to be any injury or harm</i>, just the potential for injury or harm. If person pulls trigger while gun is in mouth but gun is broken so no injury results, this is considered an attempt.  <b>Inferring Intent:</b> Even if an individual denies intent/wish to die, it may be inferred clinically from the behavior or circumstances. For example, a highly lethal act that is clearly not an accident so no other intent but suicide can be inferred (e.g. gunshot to head, jumping from window of a high floor/story). Also, if someone denies intent to die, but they thought that what they did could be lethal, intent may be inferred.</p> <p><i>Have you made a suicide attempt?</i>  <i>Have you done anything to harm yourself?</i>  <i>Have you done anything dangerous where you could have died?</i>  <i>What did you do?</i>  <i>Did you _____ as a way to end your life?</i>  <i>Did you want to die (even a little) when you _____?</i>  <i>Were you trying to end your life when you _____?</i>  <b>Or did you think it was possible you could have died from _____?</b>  <i>Or did you do it purely for other reasons / without ANY intention of killing yourself (like to relieve stress, feel better, get sympathy, or get something else to happen)? (Self-Injurious Behavior without suicidal intent)</i>            If yes, describe:</p> <p><b>Has subject engaged in Non-Suicidal Self-Injurious Behavior?</b></p>	<table border="1"> <tr> <td>Yes</td> <td>No</td> </tr> <tr> <td><input type="checkbox"/></td> <td><input checked="" type="checkbox"/></td> </tr> <tr> <td colspan="2">Total # of Attempts</td> </tr> <tr> <td colspan="2">_____</td> </tr> <tr> <td>Yes</td> <td>No</td> </tr> <tr> <td><input type="checkbox"/></td> <td><input type="checkbox"/></td> </tr> </table>	Yes	No	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Total # of Attempts		_____		Yes	No	<input type="checkbox"/>	<input type="checkbox"/>
Yes	No												
<input type="checkbox"/>	<input checked="" type="checkbox"/>												
Total # of Attempts													
_____													
Yes	No												
<input type="checkbox"/>	<input type="checkbox"/>												

**May help to infer intent**

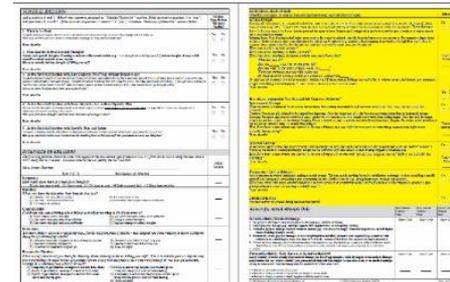

**Important: Shows you did the appropriate assessment and decided it should not be called suicidal**

# Aborted/Self-Interrupted Attempt

- When person begins to take steps towards making a suicide attempt, ***but stops themselves*** before they actually have engaged in any self-destructive behavior
- Examples:
  - Man plans to drive his car off the road at high speed at a chosen destination. On the way to the destination, he changes his mind and returns home
  - Man walks up to the roof to jump, but changes his mind and turns around
  - She has gun in her hand, but then puts it down
- Question:
  - **Has there been a time when you started to do something to end your life but you stopped yourself before you actually did anything?**

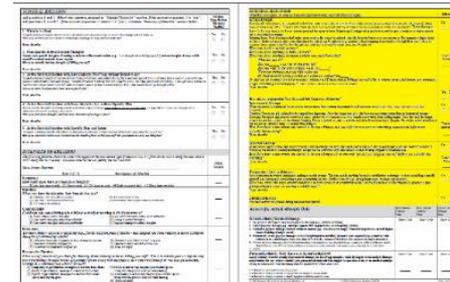

Question	Response	Score
1. Have you ever had thoughts of suicide?	Yes	1
2. How often do you have thoughts of suicide?	Often	2
3. How serious are your thoughts of suicide?	Serious	3
4. Have you ever attempted suicide?	No	0
5. How often do you attempt suicide?	Never	0
6. How serious are your suicide attempts?	Serious	3
7. Have you ever been hospitalized for suicidal thoughts or actions?	No	0
8. How often do you seek help for suicidal thoughts or actions?	Often	2
9. How serious are your suicidal thoughts or actions?	Serious	3
10. Have you ever been prescribed medication for suicidal thoughts or actions?	No	0
11. How often do you take medication for suicidal thoughts or actions?	Never	0
12. How serious are your suicidal thoughts or actions?	Serious	3
13. Have you ever been hospitalized for suicidal thoughts or actions?	No	0
14. How often do you seek help for suicidal thoughts or actions?	Often	2
15. How serious are your suicidal thoughts or actions?	Serious	3

1. Have you ever had thoughts of suicide?  
2. How often do you have thoughts of suicide?  
3. How serious are your thoughts of suicide?  
4. Have you ever attempted suicide?  
5. How often do you attempt suicide?  
6. How serious are your suicide attempts?  
7. Have you ever been hospitalized for suicidal thoughts or actions?  
8. How often do you seek help for suicidal thoughts or actions?  
9. How serious are your suicidal thoughts or actions?  
10. Have you ever been prescribed medication for suicidal thoughts or actions?  
11. How often do you take medication for suicidal thoughts or actions?  
12. How serious are your suicidal thoughts or actions?  
13. Have you ever been hospitalized for suicidal thoughts or actions?  
14. How often do you seek help for suicidal thoughts or actions?  
15. How serious are your suicidal thoughts or actions?

# Preparatory Acts or Behavior

- Definition:
  - Any other behavior (beyond saying something) with suicidal intent
- Examples
  - Collecting or buying pills
  - Purchasing a gun
  - Writing a will or a suicide note
- Question:
  - **Have you taken any steps towards making a suicide attempt or preparing to kill yourself (such as, collecting pills, getting a gun, giving valuables away, writing a suicide note)?**

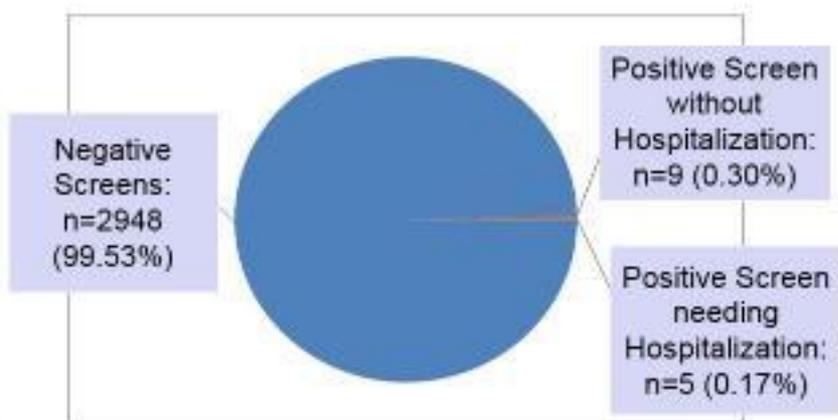

Question	Response	Score
1. Have you ever thought about suicide?	Yes, I have thought about suicide.	1
2. Have you ever attempted suicide?	No, I have never attempted suicide.	0
3. Have you ever collected pills or other items that could be used for suicide?	No, I have never collected pills or other items that could be used for suicide.	0
4. Have you ever written a suicide note?	No, I have never written a suicide note.	0
5. Have you ever given away your valuables?	No, I have never given away my valuables.	0
6. Have you ever purchased a gun?	No, I have never purchased a gun.	0

NEW YORK STATE OF OPPORTUNITY

# Further Case Examples

The patient stated that she experienced heartbreak over the “loss of a guy” a week before the interview. She stated that she took 4 clonazepam, called a girlfriend, and talked/cried it out while on the phone. She was dismissive of the seriousness of the attempt, but indicated that she wanted to die at the time she took the overdose.

1. Actual suicide attempt
2. Interrupted attempt
3. Aborted attempt

NEW YORK  
STATE OF  
OPPORTUNITY.

New York State  
Psychiatric Institute

COLUMBIA UNIVERSITY  
Department of Psychiatry

# Further Case Examples

During pill count, staff discovered that 6 tablets were missing. Upon questioning, the patient admitted that she was saving them up so she could take them all together at a later time in order to kill herself.

1. Interrupted attempt
2. Aborted attempt
3. Preparatory behavior

# Further Case Examples

Several weeks after being informed by her husband that he was having an affair, patient went to Haiti to see him to discuss the situation. She became enraged during their discussion and grabbed his gun with the intention of shooting herself. However, her husband struggled with her, took the gun away before she was able to pull the trigger, and hid it from her. States that she was feeling pain and hurt, and that she was so upset that she wanted to die.

1. Actual suicide attempt
2. Aborted attempt
3. Interrupted attempt

# Further Case Examples

The voice commanded the patient, age 18, to jump from the roof. Although the patient went to the roof, he did not jump.

1. Aborted attempt
2. Interrupted attempt
3. Actual suicide attempt

# Further Case Examples

The patient was feeling despondent about her financial situation. Her rent was due and the landlord had threatened to evict her. She went to the bathroom and took a razor from the cabinet. She cut one of her wrists and began bleeding. She bandaged up her wrist herself. During an interview a week later, she stated she had never cut herself before. She was adamant that she did not need to be hospitalized.

1. Suicide attempt
2. Non-suicidal self-injurious behavior
3. Not enough information

# Lethality

(Compilation of Beck Medical Lethality Rating Scale)

## What actually happened in terms of medical damage?

For example if there was a cut, did it require a Band-Aid or a bandage?  
Did it bleed a little bit or profusely?

### Actual Lethality/Medical Damage:

0. No physical damage or very minor physical damage (e.g. surface scratches).
1. Minor physical damage (e.g. lethargic speech; first-degree burns; mild bleeding; sprains).
2. Moderate physical damage; medical attention needed (e.g. conscious but sleepy, somewhat responsive; second-degree burns; bleeding of major vessel).
3. Moderately severe physical damage; medical hospitalization and likely intensive care required (e.g. comatose with reflexes intact; third-degree burns less than 20% of body; extensive blood loss but can recover; major fractures).
4. Severe physical damage; medical hospitalization with intensive care required (e.g. comatose without reflexes; third-degree burns over 20% of body; extensive blood loss with unstable vital signs; major damage to a vital area).
5. Death

The image shows two pages of a medical chart. The left page is titled 'PHYSICAL EXAM' and contains a table with columns for 'SYSTEMS', 'FINDINGS', and 'IMPRESSIONS'. The right page is titled 'LABORATORY' and contains a table with columns for 'TEST', 'RESULT', and 'REFERENCE RANGE'. The tables contain detailed medical data, including vital signs, physical exam findings, and laboratory results.

# Potential Lethality

Likely lethality of attempt if no medical damage. Examples of why this is important are cases in which there was no actual medical damage but the potential for very serious lethality

- Laying on tracks with an oncoming train but pulling away before run over
- Put gun in mouth and pulled trigger but it failed to fire – Both 2

## Potential Lethality: Only Answer if Actual Lethality=0

Likely lethality of actual attempt if no medical damage (the following examples, while having no actual medical damage, had potential for very serious lethality: put gun in mouth and pulled the trigger but gun fails to fire so no medical damage; laying on train tracks with oncoming train but pulled away before run over).

0 = Behavior not likely to result in injury

1 = Behavior likely to result in injury but not likely to cause death

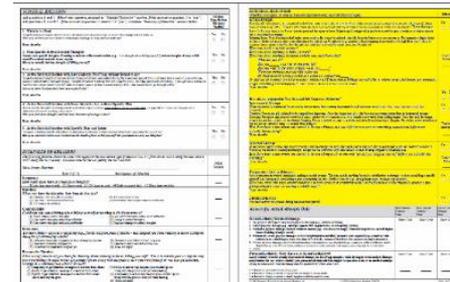

2 = Behavior likely to result in death despite available medical care

# Suicidal Behavior Administration

- Select (check) all that apply
- Only select if discrete behaviors
  - For example, if writing a suicide note is part of an actual attempt, do not give a separate rating of Preparatory Behavior (**ONLY MARK A SUICIDE ATTEMPT**)
- **Reminder:** Ideation & Behavior Must Be Queried Separately
  - Just because ideation is denied, it does not mean that there will not be any suicidal behavior
- Listen to what the person believed would happen not what you think regarding lethality

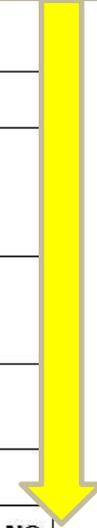

# C-SSRS SCREENER

## COLUMBIA-SUICIDE SEVERITY RATING SCALE Screen Version - Recent

	Past month	
	YES	NO
<b>Ask questions that are bolded and underlined.</b>		
<b>Ask Questions 1 and 2</b>		
1) <b><u>Have you wished you were dead or wished you could go to sleep and not wake up?</u></b>		
2) <b><u>Have you actually had any thoughts of killing yourself?</u></b>		
If YES to 2, ask questions 3, 4, 5, and 6. If NO to 2, go directly to question 6.		
3) <b><u>Have you been thinking about how you might do this?</u></b> E.g. "I thought about taking an overdose but I never made a specific plan as to when where or how I would actually do it....and I would never go through with it."		
4) <b><u>Have you had these thoughts and had some intention of acting on them?</u></b> As opposed to "I have the thoughts but I definitely will not do anything about them."		
5) <b><u>Have you started to work out or worked out the details of how to kill yourself? Do you intend to carry out this plan?</u></b>		
6) <b><u>Have you ever done anything, started to do anything, or prepared to do anything to end your life?</u></b> Examples: Collected pills, obtained a gun, gave away valuables, wrote a will or suicide note, took out pills but didn't swallow any, held a gun but changed your mind or it was grabbed from your hand, went to the roof but didn't jump; or actually took pills, tried to shoot yourself, cut yourself, tried to hang yourself, etc. <b>If YES, ask: <u>Was this within the past three months?</u></b>	YES	NO

**If 2 yes, ask 3-6**

**If 2 is no, go to 6**

# C-SSRS Timeframes

## Lifetime

Ideation: Most suicidal time most clinically meaningful – even if 20 years ago, **much more predictive than current**

Behavior: Lifetime behavior highly predictive (e.g. history of suicide attempt #1 risk factor for suicide)

<b>SUICIDAL IDEATION</b>		Lifetime: Time He/She Felt Most Suicidal		Past 1 month	
<i>Ask questions 1 and 2. If both are negative, proceed to "Suicidal Behavior" section. If the answer to question 2 is "yes", ask questions 3, 4 and 5. If the answer to question 1 and/or 2 is "yes", complete "Intensity of Ideation" section below.</i>					
<b>1. Wish to be Dead</b> Subject endorses thoughts about a wish to be dead or not alive anymore, or wish to fall asleep and not wake up. <i>Have you wished you were dead or wished you could go to sleep and not wake up?</i>		Yes <input type="checkbox"/>	No <input type="checkbox"/>	Yes <input type="checkbox"/>	No <input type="checkbox"/>
If yes, describe:					
<b>2. Non-Specific Active Suicidal Thoughts</b> General non-specific thoughts of wanting to end one's life/commit suicide (e.g., "I've thought about killing myself") without thoughts of ways to kill oneself/associated methods, intent, or plan during the assessment period		Yes <input type="checkbox"/>	No <input type="checkbox"/>	Yes <input type="checkbox"/>	No <input type="checkbox"/>
<b>SUICIDAL BEHAVIOR</b> <i>(Check all that apply, so long as these are separate events; must ask about all types)</i>		Lifetime		Past 3 months	
<b>Actual Attempt:</b> A potentially self-injurious act committed with at least some wish to die, as a result of act. Behavior was in part thought of as method to kill oneself. Intent does not have to be 100%. If there is any intent/desire to die associated with the act, then it can be considered an actual suicide attempt. <i>There does not have to be any injury or harm</i> , just the potential for injury or harm. If person pulls trigger while gun is in mouth but gun is broken so no injury results, this is considered an attempt. Inferring Intent: Even if an individual denies intent/wish to die, it may be inferred clinically from the behavior or circumstances. For example, a highly lethal act that is clearly not an accident so no other intent but suicide can be inferred (e.g., gunshot to head, jumping from window of a high floor/story). Also, if someone denies intent to die, but they thought that what they did could be lethal, intent may be inferred. <i>Have you made a suicide attempt?</i> <i>Have you done anything to harm yourself?</i> <i>Have you done anything dangerous where you could have died?</i> <i>What did you do?</i> <i>Did you _____ as a way to end your life?</i> <i>Did you want to die (even a little) when you _____?</i> <i>Were you trying to end your life when you _____?</i> <i>Or Did you think it was possible you could have died from _____?</i> <i>Or did you do it purely for other reasons / without ANY intention of killing yourself (like to relieve stress, feel better, get sympathy, or get something else to happen)? (Self-Injurious Behavior without suicidal intent)</i> If yes, describe:		Yes <input type="checkbox"/>	No <input type="checkbox"/>	Yes <input type="checkbox"/>	No <input type="checkbox"/>
Total # of Attempts		Total # of Attempts		Yes <input type="checkbox"/>	No <input type="checkbox"/>
Has subject engaged in Non-Suicidal Self-Injurious Behavior?		Yes <input type="checkbox"/>	No <input type="checkbox"/>	Yes <input type="checkbox"/>	No <input type="checkbox"/>

# Monitoring is Critical

Capture all events and types of thoughts since last assessment:  
 “Since I last saw you have you done anything.....had thoughts of...”

Recommended  
**EVERY** visit

- You don't want the time you didn't ask to be the time you needed to ask***

# TRIAGE WITH THE C-SSRS

# Research Supported Thresholds for Imminent Risk Identification

Operationalized criteria for triage and next steps whatever they may be (e.g. referral to mental health, one-to-one, etc.)

Indicated clinical management response

Scientific data to inform clinical judgment

Indicates Need For Most Extreme Next Step

COLUMBIA-SUICIDE SEVERITY RATING SCALE  
Primary Care Screen with Triage Points

SUICIDE IDEATION DEFINITIONS AND PROMPTS:		Past month	
Ask questions that are in bold and underlined.		YES	NO
<b>Ask Questions 1 and 2</b>			
<b>1) Wish to be Dead:</b> Person endorses thoughts about a wish to be dead or not alive anymore, or wish to fall asleep and not wake up? <i><b>Have you wished you were dead or wished you could go to sleep and not wake up?</b></i>			
<b>2) Suicidal Thoughts:</b> General non-specific thoughts of wanting to end one's life/commit suicide, "I've thought about killing myself" without general thoughts of ways to kill oneself/associated methods, intent, or plan." <i><b>Have you had any actual thoughts of killing yourself?</b></i>			
If YES to 2, ask questions 3, 4, 5, and 6. If NO to 2, go directly to question 6.			
<b>3) Suicidal Thoughts with Method (without Specific Plan or Intent to Act):</b> Person endorses thoughts of suicide and has thought of a least one method during the assessment period. This is different than a specific plan with time, place or method details worked out. "I thought about taking an overdose but I never made a specific plan as to when where or how I would actually do it...and I would never go through with it." <i><b>Have you been thinking about how you might do this?</b></i>			
<b>4) Suicidal Intent (without Specific Plan):</b> Active suicidal thoughts of killing oneself and patient reports having <u>some intent to act on such thoughts</u> , as oppose to "I have the thoughts but I definitely will not do anything about them." <i><b>Have you had these thoughts and had some intention of acting on them?</b></i>			
<b>5) Suicide Intent with Specific Plan:</b> Thoughts of killing oneself with details of plan fully or partially worked out and person has some intent to carry it out. <i><b>Have you started to work out or worked out the details of how to kill yourself? Do you intend to carry out this plan?</b></i>			
<b>6) Suicide Behavior Question</b> <i><b>Have you ever done anything, started to do anything, or prepared to do anything to end your life?</b></i> Examples: Collected pills, obtained a gun, gave away valuables, wrote a will or suicide note, took out pills but didn't swallow any, held a gun but changed your mind or it was grabbed from your hand, went to the roof but didn't jump; or actually took pills, tried to shoot yourself, cut yourself, tried to hang yourself, etc. <b>If YES, ask: Was this within the past 3 months?</b>

**Risk  
Info  
Travels**

1. This is the current functionality in MARS that will show the patient's name in red with an exclamation point, if there is a warning for this patient. Applies to all warnings, not just suicide risk.
2. This is our new suggestion to show the speed upon text if the patient has a current alert based off the C-SSRS. These will be a hover that will state, "Go to Suicide: C-SSRS under MARS links on the left hand side."
3. The description will show all the behaviors that have been selected for this patient throughout their lifetime. If they have a Warning, 'YES' will be displayed in the Warning column.
4. To get more details, the user would select the C-SSRS icon on the left hand side. This would bring them to the C-SSRS main page. See other mockup for further details.

- 4/5 past month OR behavior past 3 months = highest level "SUICIDE WARNING"
- 4/5 OR behavior ever = "SUICIDE HISTORY" – suicidal risk elevated.

<b>SUICIDAL BEHAVIOR</b> <i>(Check all that apply, so long as these are separate events; track about all types)</i>	Lifetime		Past 3 Months	
<b>Actual Attempt:</b> A potentially self-injurious act committed with at least some wish to die, as a result of fear. Behavior was in part thought of as method to kill oneself. Intent does not have to be 100%. If there is any intent/desire to die associated with the act, then it can be considered an actual suicide attempt. <i>There does not have to be any injury or harm, just the potential for injury or harm. If person pulls trigger while gun is in mouth but gun is broken so no injury results, this is considered an attempt.</i> Inferring Intent: Even if an individual denies intent/wish to die, it may be inferred clinically from the behavior or circumstances. For example, a highly lethal act that is clearly not an accident so no other intent but suicide can be inferred (e.g., gunshot to head, jumping from window of a high rise/story). Also, if someone denies intent to die, but they thought that what they did could be lethal, intent may be inferred. <b>Did you ever do anything to try to kill yourself or make yourself not alive anymore? What did you do?</b> <b>Did you ever hurt yourself on purpose? Why did you do that?</b> Did you _____ as a way to end your life? Did you want to die (even a little) when you _____? Were you trying to make yourself not alive anymore when you _____? Or did you think it was possible you could have died from _____? Or did you do it purely for other reasons, not at all to end your life or kill yourself (like to make yourself feel better, or get something else to happen)? (Self-Injurious Behavior without suicidal intent) If yes, describe:	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Yes <input type="checkbox"/>	No <input type="checkbox"/>
	Total # of Attempts		Total # of Attempts	
	_____		_____	
<b>Has subject engaged in Non-Suicidal Self-Injurious Behavior?</b> Yes <input type="checkbox"/> No <input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/>	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Yes <input type="checkbox"/>	No <input type="checkbox"/>
<b>Has subject engaged in Self-Injurious Behavior, intent unknown?</b> Yes <input type="checkbox"/> No <input type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/>	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Yes <input type="checkbox"/>	No <input type="checkbox"/>
<b>Interrupted Attempt:</b> When the person is interrupted (by an outside circumstance) from starting the potentially self-harmful act (if not for that, actual attempt would have occurred). Overdose: Person has pills in hand but is stopped from ingesting. Once they ingest any pills, this becomes an attempt rather than an interrupted attempt. Shooting: Person has gun pointed toward self, gun is taken away by someone else, or it somehow prevented from pulling trigger. Once they pull the trigger, even if the gun fails to fire, it is an attempt. Jumping: Person is poised to jump, is grabbed and taken down from ledge. Hanging: Person has noose around neck but has not yet started to hang - is stopped from doing so. <b>Has there been a time when you started to do something to make yourself not alive anymore (end your life or kill yourself) but someone or something stopped you before you actually did anything? What did you do?</b> If yes, describe:	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Yes <input type="checkbox"/>	No <input type="checkbox"/>
	Total # of interrupted		Total # of interrupted	
	_____		_____	
<b>Aborted or Self-Interrupted Attempt:</b> When person begins to take steps toward making a suicide attempt, but stops themselves before they actually have engaged in any self-destructive behavior. Examples are similar to interrupted attempts, except that the individual stops him/herself, instead of being stopped by something else. <b>Has there been a time when you started to do something to make yourself not alive anymore (end your life or kill yourself) but you changed your mind (stopped yourself) before you actually did anything? What did you do?</b> If yes, describe:	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Yes <input type="checkbox"/>	No <input type="checkbox"/>
	Total # of aborted or self-interrupted		Total # of aborted or self-interrupted	
	_____		_____	
<b>Preparatory Acts or Behavior:</b> Acts or preparation toward intentionally making a suicide attempt. This can include anything beyond a verbalization or thought, such as: assembling a specific method (e.g., buying pills, purchasing a gun) or preparing for one's death by suicide (e.g., giving things away, writing a suicide note). <b>Have you done anything to get ready to make yourself not alive anymore (to end your life or kill yourself)-like giving things away, writing a goodbye note, getting things you need to kill yourself?</b> If yes, describe:	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Yes <input type="checkbox"/>	No <input type="checkbox"/>
	Total # of preparatory acts		Total # of preparatory acts	
	_____		_____

New York State Psychiatric Institute

## MENTAL STATUS SCREENING

The following six questions ask about how you have been feeling. For each question tell me if you have felt this way **NONE** of the time, **A LITTLE** of the time, **SOME** of the time, **MOST** of the time, or **ALL** of the time.

In the past 30 days about how often did you feel...	NONE	A LITTLE	SOME	MOST	ALL
1. ...nervous?	0	1	2	3	4
2. ...hopeless?	0	1	2	3	4
3. ...restless or fidgety?	0	1	2	3	4
4. ...so depressed that nothing could cheer you up?	0	1	2	3	4
5. ...that everything was an effort?	0	1	2	3	4
6. ...worthless?	0	1	2	3	4
TOTAL SCORE FOR 1-6 = ____	Column Total =				

In the past month:

	YES	NO
7. ...have you wished you were dead, or wished you could go to sleep and not wake up?		
8. ...have you actually had any thoughts of killing yourself?		
If NO to Question 8, SKIP to Question 12		
9. ...have you been thinking about how you might do this?		
10. ...have you had these thoughts and had some intention of acting on them?		
11. ...have you started to work out or worked out the details of how to kill yourself? Do you intend to carry out this plan?		
12. Have you <u>ever</u> done anything, started to do anything, or prepared to do anything with any intent to die? (For example collected pills or a razor blade, made a noose, given things away, or written a goodbye or suicide note.)		
If YES, ask: How long ago did you do any of these things?		
<input type="checkbox"/> More than one year ago?		
<input type="checkbox"/> Between three months and one year ago?		
<input type="checkbox"/> Within the past month?		
13. If YES, ask: How many times have you done any of these things? <input type="text"/> times		

Scoring Rules	Instructions
1. If the total of 1 thru 6 = 8 to 12 → <b>ROUTINE REFERRAL</b>	1. Ask <b>ONLY</b> non-MHSDS inmates
2. If the total of 1 thru 6 = 13 to 17 → <b>URGENT REFERRAL</b>	2. Ask <b>all</b> questions just as they are written.
3. If the total of 1 thru 6 ≥ 18 → <b>EMERGENT REFERRAL</b>	3. All questions (except 12) apply to the last 30 days.
Questions 7-13	4. Repeat questions as necessary.
4. If item 7 = YES → <b>ROUTINE REFERRAL</b>	5. Score questions 1-6 by totaling the numbers in the boxes.
5. If item 8 or 9 = YES → <b>URGENT REFERRAL</b>	6. Questions 7-12 are YES/NO.
6. If item 10 or 11 = YES → <b>EMERGENT REFERRAL</b>	7. Use the scoring rules to determine need for referral for further evaluation.
7. If item 12 = More than one year ago → <b>ROUTINE REFERRAL</b>	8. If the inmate refuses → <b>EMERGENT</b> referral.
8. If item 12 = 3 month to 1 year ago → <b>URGENT REFERRAL</b>	9. In all cases, use best judgment to refer – no matter the answers to the questions.
9. If item 12 = Within past month → <b>EMERGENT REFERRAL</b>	
10. If item 13 = 2 or more → <b>URGENT REFERRAL</b>

<input type="checkbox"/>		<input type="checkbox"/>	
<input type="checkbox"/>		<input type="checkbox"/>	
Describe any suicidal, self-injurious or aggressive behavior (include dates)			

Ask Questions 1 and 2	YES	NO
1) <i>Have you wished you were dead or wished you could go to sleep and not wake up?</i>		
2) <i>Have you actually had any thoughts about killing yourself?</i>		
If YES to 2, answer questions 3, 4, 5, and 6. If NO to 2, go directly to question 6.		
3) <i>Have you thought about how you might do this?</i>		
4) <i>Have you had these thoughts and had some intention of acting them?</i>		
5) <i>Have you started to work out or worked out the details of how to kill yourself? Do you intend to carry out this plan?</i>		
6) <i>Have you ever done anything, started to do anything, or prepared to do anything to end your life?</i>		
Examples: Collected pills, obtained a gun, gave away valuables, wrote a will or suicide note, took out pills but didn't swallow any, held a gun but changed your mind or it was grabbed from your hand, went to the roof but didn't jump; or actually took pills, tried to shoot yourself, cut yourself, tried to hang yourself, etc.

Outpatient Psychiatry Pilot – Self Report Computer Version (523 Encounters)

- 6.2% positive screen on C-SSRS  
vs.
- 23.8% endorsed item #9 of PHQ-9

Most, but not all, of the positive Columbia screen patients endorsed #9 of PHQ9 e.g. Cases were missed

# Picking up People At the Right Time

After C-SSRS, # of psychiatric consults always stayed below rates before implementation

\*\*Economic crises/increases in unemployment worse than national average in Reading and Berks county area

“[The C-SSRS] allowed us to identify those at risk and **better direct limited resources in terms of psychiatric consultation services and patient monitoring** and it has also given us the **unexpected benefit** of identification of mental illness in the general hospital population which **allows us to better serve our patients and our community.**”

# The Problem in Schools: Who Do We Refer?

## New York City

- Four hospitals: **61-97% of referrals did not require hospitalization.**
- NYC DOE:
  - “The great majority of children & teens referred by schools for psych ER evaluation are not hospitalized & **do not require the level of containment, cost & care** entailed in ER evaluation.”
  - “Evaluation in hospital-based psych ER’s is **costly, traumatic** to children & families, and may be **less effective** in routing children & families into ongoing care.”

**One Student sat 9 hours in a principal’s office  
waiting for EMT**

# Screening in Schools – The Solution

-38 middle schools/nurse delivery: **an estimated 100+ students were identified that would have otherwise been missed, while dramatically reducing unnecessary referrals.**

**640 middle schools last year – now on to the High Schools**

**“City schools expand suicide training” (C-SSRS): “This enhanced service has made more appropriate referrals for students to see support staff in the school and referrals to community agencies as needed...”**  
**– Crain’s, NY 7/20/12**

**25% of teachers report being approached by an at-risk child**

# Asking These Questions Helps Protect Against Internal and External Liability

“If a practitioner asked the questions... It would  
provide some legal protection”

—Bruce Hillowe, mental health attorney specializing in malpractice litigation  
(Crain’s NY, 11/8/11)

“I believe it sets the standard...we take a proactive  
position in patient safety”

– Patient Safety Risk Manager

# Breaking the Silence

When We “Just Ask” We Break the Silence and Give Permission to Connect and Build a Path to Openness and Resilience Across Generations

**“This is not only saving millions of lives, it is literally changing the way we live our lives, breaking down barriers that have been built over thousands of years. But we are just one nation and every nation deserves this lifesaving tool.”**

# C-SSRS Training Opportunities

- Live Webinars every 6-8 weeks
- Interactive on-line training through National Action Alliance for Suicide Prevention Zero Suicide Website ([zerosuicide.sprc.org/toolkit/identify](http://zerosuicide.sprc.org/toolkit/identify))
- Recorded trainings on YouTube channel
- Download a recorded training from Dropbox
- Receive a DVD by mail with recorded trainings
