

Errata for Materials related to the October 1, 2011 Prioritized List of Health Services

Interim Modifications to Prioritized List Effective October 1, 2011

- Incorrectly lists ICD-9-CM code V04.82 and CPT code 90378 being deleted from line 3 and added to line 634. The prioritization of the use of Synagis for the prevention of RSV in high risk children is being taken back to the Health Services Commission's October 13, 2011 meeting for further discussion. All other documents included in the original posting of materials for the 10/1/11 list did not include this change. (Changed 9-19-11)

Note: The 9-19-11 version of this erratum incorrectly listed the CPT code affected as "30378" instead of "90378".

- Restored the condition and treatment descriptions for Line 390 as no changes should have been made from the April 1, 2011 version of that line. (Changed 10-14-11)
