### **Health advisory issued for water contact at Cannon Beach**

#### ***Higher than normal bacteria levels found at Clatsop County beach***

A public health advisory was issued Wednesday due to higher-than-normal levels of bacteria in ocean waters at Cannon Beach in Clatsop County. The elevated bacteria level was found at the mouth of Ecola Creek.

Increased pathogen and fecal bacteria levels in ocean waters can come from both shore and inland sources such as storm water runoff and animal waste from birds such as sea gulls and even pets.

Water samples indicate higher-than-normal levels of fecal bacteria, which can result in gastroenteritis, skin rashes and other illnesses. Direct contact with the water should be avoided until the advisories are lifted, especially for children and the elderly, who may be more vulnerable to waterborne bacteria.

While these advisories are in effect at Cannon Beach, visitors should avoid wading in nearby creeks or in discolored water and stay clear of water runoff flowing into the ocean. Even if there is no advisory in effect, officials recommend avoiding swimming in the ocean for 48 hours after a rainstorm.

State officials advise that the status of water contact advisories at beaches is subject to change. For the most recent information on advisories, please visit [www.healthoregon.org/beach](http://www.healthoregon.org/beach) or call 1-877-290-6767.

**(cont.)**

Although state officials discourage water contact, they continue to encourage other recreational activities such as walking, playing on the beach, flying kites, and picnicking on these beaches because they pose no health risk even during an advisory. Neighboring beaches are not affected by this advisory.

Since 2003 state officials have used a federal Environmental Protection Agency grant to monitor popular Oregon beaches and make timely reports to the public about elevated levels of fecal bacteria. Oregon state organizations participating in this program include Oregon Health Authority's Public Health Division, Oregon Department of Environmental Quality and Oregon Parks and Recreation Department. For more information contact the Beach Monitoring Program at 971-673-0400 or [www.healthoregon.org/beach](http://www.healthoregon.org/beach).
