Oregon Public Health Division lifts advisory for Lemolo Lake *Reduced blue-green algae levels confirmed*

A health advisory prompted by high algae levels found in Lemolo Lake, located about 60 miles east of Roseburg, was lifted today by Oregon Health Authority's Public Health Division and Douglas County Health Department officials.

The advisory went into effect on August 31.

Water monitoring has confirmed reduced levels of blue-green algae that can produce toxins harmful to humans and animals.

These reduced levels are not likely to be associated with dangerous toxin concentrations in the water, according to World Health Organization guidelines.

Oregon health officials advise people who recreate in Oregon water bodies to always be alert to signs of algae blooms. People and their pets should avoid water contact if there are visible clumps of algae in the water.

For local information contact the Diamond Lake Ranger District office at 541-498-2531 or 541-793-3310 weekends, or www.fs.fed.us/r6/umpqua/.
