First Aid For Choking
(conscious adults)

1. If someone cannot breathe, cough or speak...

2. Ask, “Are you Choking” and ask the victim if you can help them. If they are choking, call 9-1-1 or the local emergency number.

3. Give First Aid for Choking
   - Stand behind the person
   - Wrap your arms around their waist
   - Make a fist with one hand. Place your fist (thumb side) against the person’s stomach in the midline just above the navel and well below the ribs.
   - Grasp your fist with your other hand. Press into the stomach with a quick upward thrust.

4. Repeat if necessary.
First Aid For Choking (INFANT or CHILD)

**IF...**
the infant or child is breathing and continues to be able to speak or cough

**THEN...**
Encourage continued coughing and stay with the victim to respond if their condition gets worse.

**IF...**
the infant or child has ineffective coughing, high pitched inspirations, and the inability to speak or cry.

**THEN...**
Call 9-1-1 and immediately begin the obstructed airway sequence described below.

Tell someone to dial **9-1-1** to reach the Emergency Medical Services.

**Conscious Child (over 1 year old)**
To dislodge an object from the airway of a child, perform abdominal thrusts:
- Stand or get on one knee behind the child.
- Place the thumb side of your fist just above the child’s belly button, grab your fist with your other hand.
- Give quick upward thrusts until the object is removed or the child goes unconscious.
First Aid For Choking

Conscious Infant (under 1 year old)

To dislodge an object in the airway of an infant, perform 5 Back Blows and 5 Chest Thrusts by:

Supporting the head and neck with one hand, straddle infant face down, head lower than trunk, over your forearm, supported on your thigh.

Deliver five back blows with the heel of the hand between the infant’s shoulder blades.

Turn the infant over by sandwiching the infant between your hands and forearms and turn onto its back. With their head lower than their trunk use 2-3 fingers on the center of the breastbone to deliver five chest thrusts. Each thrust should be about 1/2 - 1 inch deep.

Repeat back blows and chest thrusts until foreign body is expelled or the infant becomes unconscious.
