The Role of WIC in Public Health

Overview

WIC is a preventive public health nutrition program that provides nutrition and breastfeeding education, nutritious foods, and improved access to regular health care and social services to low and moderate-income women and young children with, or at risk of developing, nutrition related health problems.

What is Public Health?

Public Health is the art and science dealing with the protection and improvement of community health by organized community effort and including preventive medicine and sanitary science.¹

Public health aims to prevent health-related problems from developing or progressing in entire populations. Public health professionals study how the health of a population is affected by genetics, the environment and personal choice. They also develop and implement educational programs, service-based programs like vaccine administration, and policies for specific target populations based on the assessed health problems and risk factors of the target populations. Target populations can range in size from the number of students in a classroom to all residents of a country.²

It is Important for the American Population to Be Healthy

A healthy population...

» Ensures a productive and globally competitive workforce.
» Enhances national security by providing a strong pool of young people physically and mentally capable of serving in the military.
» Reduces health care costs by preventing diseases and injuries that are expensive to treat.
» Enables citizens to pursue their American Dreams without hindrance by poor health.

As the nation’s premier public health nutrition program, WIC is a cost-effective, sound investment—insuring the health of our children.

NWA’S MISSION

NWA inspires and empowers the WIC community to advocate for and promote quality nutrition services for all eligible mothers and young children, and assure effective management of WIC.
The WIC Public Health Model: Low-income Women, Infants, and Children

Public Health Problem
» Higher rates of low and very low birth-weight babies
» Higher rates of stunted growth and development of children
» Higher rates of infant mortality
» Lower breastfeeding rates

Behavioral and Environmental Risk Factors
» Inadequate intake of nutritious food
» Inability to afford nutritionally adequate food
» Lack of nutrition and health education and support
» Lack of regular access to health care and social services

Public Health Program
» Nutrition education
» Breastfeeding education and support
» Health care and social services referral services
» Nutritious food prescription (package)

Short-term Outcomes
» Improved nutritional intake/diets
» Increased health knowledge, especially about nutrition and breastfeeding
» Increased use of health care and social services

Long-term Outcomes
» Decreased rates of anemia
» Reduced risk for pre-term, low birth-weight, and very low birth-weight babies
» Reduced infant mortality rates
» Adequate physical growth and cognitive development
» Increased breastfeeding rates
» Reduced risk for child abuse and neglect
» Reduced long-term health care costs

The WIC Public Health Model

The WIC Program model was developed and modified over the years to target behavioral and environmental risk factors that contribute to pre-term and low birth-weight pregnancies, stunted childhood growth and development, infant mortality, and low breastfeeding rates in the United States. For over 35 years, WIC has been effective in reducing the burden of these public health problems for millions of families and the general population.

WIC is an Important Piece of the Local Public Health System

WIC is housed within the state departments of health and operates interdependently with other public health programs. Providing referral services to health care and social services, WIC is a “gateway to the health care and social service systems,” which enables more comprehensive health promotion and disease prevention in the WIC population.³
**WIC-Related Healthy People 2020 Objectives**

<table>
<thead>
<tr>
<th>HEALTHY GROWTH AND DEVELOPMENT</th>
<th>HEALTH CARE ACCESS</th>
<th>NUTRIENT INTAKE/DIET</th>
</tr>
</thead>
<tbody>
<tr>
<td>Increase the proportion of children who are ready for school in all five domains of healthy development: physical development, social-emotional development, approaches to learning, language, and cognitive development.</td>
<td>Increase the proportion of women delivering a live birth who received preconception care services and practiced key recommended preconception health behaviors.</td>
<td>Increase the proportion of women of childbearing potential with intake of at least 400ug (micrograms—need the correct “u” symbol) of folic acid from fortified foods or dietary supplements.</td>
</tr>
<tr>
<td>Reduce low birth weight (LBW) and very low birth weight (VLBW).</td>
<td>Increase the proportion of pregnant women who receive early and adequate prenatal care.</td>
<td>Reduce the proportion of women of childbearing potential who have low red blood cell folate concentrations.</td>
</tr>
<tr>
<td>Reduce preterm births.</td>
<td><strong>FOOD ACCESS AND SECURITY</strong></td>
<td>Increase the contribution of fruits to the diets of the population aged 2 years and older.</td>
</tr>
<tr>
<td>Reduce the rate of fetal and infant deaths.</td>
<td>Eliminate very low food security among children.</td>
<td>Increase the variety and contribution of vegetables to the diets of the population aged 2 years and older.</td>
</tr>
<tr>
<td><strong>WEIGHT MAINTENANCE</strong></td>
<td>Reduce household food insecurity and in doing so reduce hunger.</td>
<td>Increase the contribution of whole grains to the diets of the population aged 2 years and older.</td>
</tr>
<tr>
<td>Increase proportion of adults who are at a healthy weight.</td>
<td><strong>BREASTFEEDING</strong></td>
<td>Reduce consumption of saturated fat in the population aged 2 years and older.</td>
</tr>
<tr>
<td>Reduce the proportion of adults who are obese.</td>
<td>Increase the proportion of Americans who have access to a food retail outlet that sells a variety of foods that are encouraged by the Dietary Guidelines for Americans.</td>
<td>Reduce the consumption of sodium in the population aged 2 years and older.</td>
</tr>
<tr>
<td>Reduce the proportion of children and adolescents who are considered obese.</td>
<td>Increase the proportion of infants who are breastfed.</td>
<td>Increase consumption of calcium in the population aged 2 years and older.</td>
</tr>
<tr>
<td>Increase the proportion of mothers who achieve recommended weight gain during pregnancies.</td>
<td><strong>OTHER HEALTH BEHAVIOR</strong></td>
<td>Reduce iron deficiency among young children and females of childbearing age.</td>
</tr>
<tr>
<td>Prevent inappropriate weight gain in youths and adults.</td>
<td>Increase abstinence from alcohol, cigarettes, and illicit drugs among pregnant women.</td>
<td>Reduce iron deficiency among pregnant females.</td>
</tr>
</tbody>
</table>

**WIC is Important to Achieving National Public Health Goals**

The Healthy People 2020 national initiative identifies approximately 600 science-based objectives to improve the health of Americans. WIC is instrumental in working towards two major Healthy People 2020 goals and nearly 30 health objectives.

» Goal: Promote health and reduce chronic disease risk through the consumption of healthful diets and achievement and maintenance of healthy body weights.

» Goal: Improve the health and well-being of women, infants, children, and families.
### WIC Program Outcomes

<table>
<thead>
<tr>
<th>Healthy Birth Outcomes</th>
<th>Why It’s Important</th>
</tr>
</thead>
<tbody>
<tr>
<td>» Prenatal WIC participation is associated with lower infant mortality rates.¹</td>
<td>Preterm births cost the U.S. over $26 billion a year, with average first year medical costs for a premature/low birth-weight baby of $49,033 compared to $4,551 for a baby born without complications.¹⁵ For every dollar spent on a pregnant woman in WIC, up to $4.21 is saved in Medicaid.¹⁶</td>
</tr>
<tr>
<td>» It is now well-documented in research that WIC has done a good job of improving birth outcomes and the health of infants, including reducing low birth weight births below 2500g.² ³ ⁴ ⁵ ⁶ ⁷ ⁸ ⁹</td>
<td>WIC is particularly effective at improving birth outcomes in the moms with inadequate prenatal care and who are particularly high risk cases.¹⁰ ¹¹ Longer duration of participation in WIC yields better birth outcomes. WIC participation results in better birth outcomes therefore WIC participation also results in lower Medicaid costs.¹² ¹³ ¹⁴</td>
</tr>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td>Increased Breastfeeding Rates</td>
<td></td>
</tr>
<tr>
<td>» With increasing breastfeeding education and support services over the years, the WIC breastfeeding initiation rate increased 21.8 percentage points to 63.1% between 1998 and 2010.¹⁷</td>
<td>Breastfeeding helps mothers feel close to their babies, and breast milk contains all the nutrients infants need to grow and develop. Breastfed infants tend to be healthier since they receive antibodies from the breast milk, protecting them against infection. Breastfeeding has been shown to reduce the risk for developing obesity later in childhood.¹⁵ ¹⁶ ¹⁷ ¹⁸ ¹⁹ ²⁰ It provides a protective effect against infectious diseases and sudden infant death syndrome in children.²⁰ ²¹ ²² ²³ ²⁴ ²⁵ ²⁶ ²⁷ ²⁸ ²⁹ ³⁰ ³¹ And, it improves cognitive development.³² It has been associated with a reduction in LDL cholesterol, blood pressure related disorders, type 2 diabetes, and cardiovascular dysfunction.³³ ³⁴ ³⁵ ³⁶ ³⁷ ³⁸ Additionally, if 90% of US mothers exclusively breastfed their infants to 6 months, the US would save $13 billion per year in medical expenses and prevent over 900 deaths annually.³⁹</td>
</tr>
<tr>
<td>» WIC has been shown to positively influence a mother’s decision to breastfeed.¹⁸ WIC’s Loving Support Makes Breastfeeding Work campaign has also been successful in educating and raising awareness about breastfeeding.¹⁹ ²⁰ ²¹ And, breastfeeding peer counselor support has been shown to be effective in improving breastfeeding initiation and duration rates in low-income women in WIC and in women overall.²² ²³ ²⁴ ²⁵ ²⁶ ²⁷ ²⁸ ²⁹ ³⁰ ³¹ ³² ³³ ³⁴ ³⁵ ³⁶ ³⁷ ³⁸ ³⁹ ⁴⁰ ⁴¹ ⁴² ⁴³ ⁴⁴ ⁴⁵</td>
<td></td>
</tr>
<tr>
<td>Adequate Growth and Development</td>
<td></td>
</tr>
<tr>
<td>» Infants receiving WIC are less likely to be underweight, but are not at greater risk for overweight.³⁵</td>
<td>Infancy and early childhood are formative years for physical and cognitive development, setting a positive or negative health trajectory for the rest of life.</td>
</tr>
<tr>
<td>» Four and five-year-olds whose mothers participated in WIC during pregnancy have better vocabulary test scores than children whose mothers had not received WIC benefits.³⁶</td>
<td></td>
</tr>
</tbody>
</table>
### WIC Program Outcomes

<table>
<thead>
<tr>
<th>Increased Consumption of Key Nutrients/Increased Nutrient Density of Diet</th>
<th>Why It’s Important</th>
</tr>
</thead>
<tbody>
<tr>
<td>» WIC children have higher increased intakes of iron, potassium, and fiber. ¹⁷</td>
<td>A healthy diet is associated with a positive health status and can reduce the risk for several chronic diseases including obesity, heart disease, type 2 diabetes, and some cancers. Consuming a healthy diet during early childhood contributes to adequate growth and development.</td>
</tr>
<tr>
<td>» WIC nutrition education leads to an increased consumption of whole grains, fruits, and lower-fat milk. ³⁸</td>
<td></td>
</tr>
<tr>
<td>» WIC participation has been documented as associated with improvement in Healthy Eating Index scores and subscores for vegetables, fruits and meats as well as decreasing intake of fat and added sugar. ³⁹ ⁴⁰</td>
<td></td>
</tr>
<tr>
<td>» After the introduction of the updated WIC food packages, WIC participants increased consumption of healthy foods, including whole grains, fruits, and vegetables, and decreased consumption of whole milk. ⁴¹</td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Decreased Prevalence of Anemia</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>» Low-income children enrolled in WIC have a lower prevalence of anemia than those who are not enrolled in WIC. ⁴²</td>
<td>Anemia is a condition caused by lack of healthy red blood cells to carry oxygen around to tissues in the body. Not only does anemia disrupt the growth and health of body tissues because they are not getting enough oxygen, but symptoms that manifest as a result, including fatigue, dizziness, headaches and difficulty concentrating, interfere with living a productive and healthy life. ⁴³</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Improved Likelihood of Immunization</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>» Children who participate in WIC are more likely to be immunized than children who drop out of WIC. ⁴⁴</td>
<td>Vaccines protect children from well-known serious infections that can lead to further medical complications, poor health, and death. Vaccination of large portions of a population also hinders the spread of infectious diseases, and as a result, protects vulnerable members of the community who cannot get vaccinated for various reasons. ⁴⁵</td>
</tr>
