

# Introduction to Seasonally Varying Flows

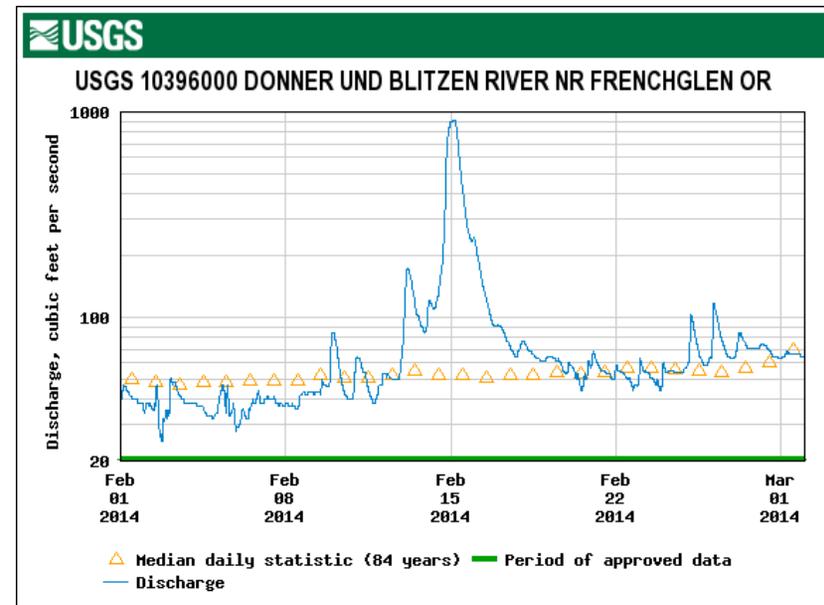

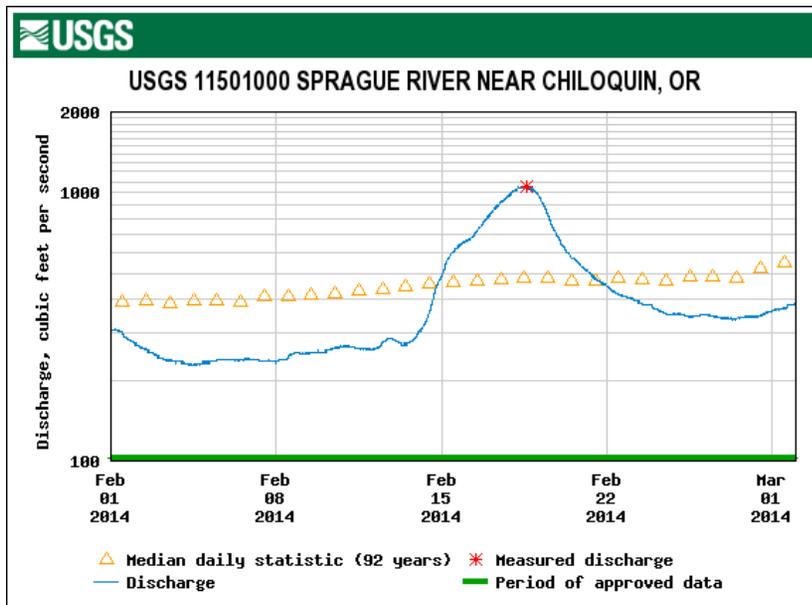

What we are trying to protect

Why it matters

# Components of hydrograph

# Seasonally varying flows

Elements: Magnitude, frequency, duration, timing, rate of change

# Why percent of flow?

- Seasonally varying flows protect full range of goods and services
  - But challenging to prescribe
- Percent of flow approach relies on natural variability, altered by specific percentage of deviation
  - Especially relevant when flow conditions are not static
