

I have been an OMMP patient since shortly after relocating here after Hurricane Katrina.

I have had a brother, sister, sister-in-law, & nephew die from abusing prescription drugs.

I use cannabis for degenerative disc disease, spinal stenosis, nausea, muscle spasms, from a automobile accident years ago.

I am currently post-op from a Laminectomy C2 - C5. When they went in, my spinal column was so disintegrated, they had to putty in a donor spinal column before they could attach the rods and screws. Shortly after surgery, I discontinued my pain drip before my neurosurgeon saw me.

Surgery was on Friday; I went home Sunday morning.

Cannabis oil was applied to my shoulders & back. my scar healed quickly. after it was fully closed

& healed, cannabis oil was applied there as well.

My biggest point is: Medical Marijuana does not get you high. It IS my medicine, & I use it as such.

Sincerely,

Thomas J. Dickerson, Sr.
