

Yamhill County Public Health Modernization Summary of priorities and key activities

Yamhill County Modernization priorities have been to support infrastructure growth and development in key fundamental areas to ensure we are able to protect and promote the health of all those in our community. We have added critical positions in communicable disease as well as data analytics to meet our strategic goals of being a data driven and responsive department.

Additionally, our infrastructure investments have included investment in software that will allow us to systematically track progress towards public health goals as well as display them for our community to visualize in accessible and culturally relevant ways.
