1 Rates are adjusted to the U.S. standard million population and are per 100,000. Age-adjusted death rates allow the comparison of Oregon and the U.S. as if the population structure of each were identical. (Oregon's population is older than the U.S. as a whole.) Any differences in rates are due to factors other than age. The rates in this table were calculated using the federal Center for Disease Control and Prevention's (CDC) WONDER (Wide-Ranging Online Data for Epidemiological Research) system. These rates vary slightly from rates published by the National Center for Health Statistics because of different population estimate methodologies.

2 Ranked from high (1) to low (51) among the 50 states and the District of Columbia.
