TWIST Updates for 2/1/2020

Table of Contents

New with this TWIST release

"Select Printer" function added

A "Select Printer" menu item has been added to the file menu for reports. This function will allow users to manually select a printer if they are otherwise unable to print.

A "Select Printer" button has been added to several screens that currently include a "Print" button. This button will allow users to manually select a printer if they are otherwise unable to print documents. This button has been added to the following screens:

- Benefits Lists
- Immunization Status letter
- Farmers Market Issuance
- Growth charts
- Referrals
- Next Steps

This functionality should fix some of the printing problems that started with the Citrix upgrade.

Other fixes

- The endless loop of error messages when performing a client search has been corrected.
- Fixed the need to minimize TWIST before being able to open another program from the bottom task bar.
