Footnotes on the following page

Notes:

1. Employers: Counts of employers in the Oregon workers' compensation system. Employers can either obtain coverage through a workers' compensation insurer or become self-insured. The column consists of two data series. (1) The 1996-present counts are the numbers of employers that owed a workers' compensation assessment at any point during the year; the numbers are rounded to the nearest 100. A legislative change (HB 3618, 2010 legislative session) required that personal support workers pay the assessment, so they are a part of the count beginning in 2011. (2) The 1968-1995 counts represent employers with workers' compensation coverage in December of each year.

2. Subject workers: Counts of workers covered by the Oregon workers' compensation system. The figures are derived from data provided by the Oregon Employment Department Quarterly Census of Employment and Wages, U.S. Bureau of Labor Statistics Current Employment Survey, Oregon Department of Human Services, City of Portland (Fire and Police Disability & Retirement Fund), and Pacific Maritime Association. The figure for the latest year is subject to revision; all numbers are rounded to the nearest 100.

3. Accepted disabling claims: Any injury is classified as disabling if it causes the worker temporary disability (time-loss), permanent disability, or death. The worker will not receive time-loss benefits for the first three days unless he or she is off work and not released to return to any work for the first 14 consecutive days or is admitted to a hospital as an inpatient during the first 14 consecutive days. The claim is also classified as disabling if there is a reasonable expectation that permanent disability will result from the injury. The counts are the numbers of claims accepted as disabling by insurers or upon appeal. Counts are reported by the date the claim was reported to DCBS as accepted and disabling; data for 1983 are estimated.

4. Estimated accepted nondisabling claims: Accepted nondisabling claims (often known as "medical-only claims") are not reported to DCBS. The figures are derived from a number of sources. Recent data are estimated from medical billing data that are reported for some claims.

5. Estimated total accepted claims: The sum of the reported accepted disabling claims and the estimated accepted nondisabling claims.

6. Denied claims: Workers' compensation claims denied by insurers. The figures include both denied disabling and denied nondisabling claims. These are denials of the whole claim; claims with denials of some conditions but not all conditions are not included. The column has two data series. (1) For 1992-present, the counts are the numbers of claims originally denied during the calendar year. (2) For 1968-1991, the counts are the numbers of claims that were denied at some point during the year.

7. Claim closures and resolutions: The claims closure process involves closing a claim, halting temporary disability payments, and determining permanent disability when an injured worker is found to be medically stationary. While for many claims this ends the benefits, some medical benefits are available after claim closure, and claims may be reopened for claim aggravation, new conditions, or vocational training. The claim closure process does not occur when a claims disposition agreement (CDA) is reached before the claim closure; these CDAs were authorized by law in 1990 to resolve the indemnity portion of the claim. The column consists of two data series. (1) For 1982-present, the series is the sum of the numbers of claim closures, including multiple closures per claim but excluding reclassifications, amending and correcting closures, and the numbers of CDAs that resolved the claim before the closure. Recent numbers may be revised. (2) For 1968-1981, the series is the numbers of claim closures, including reclassifications, amending and correcting closures, and multiple closures per claim.

8. Fatality claims: Counts of the fatalities that had death benefits paid under the Oregon workers' compensation statute. Counts are reported by the date the claim was reported to DCBS as accepted, which may be different than the date of injury or death.

9. Net PTD awards: Permanent total disability (PTD) is the loss of use or function of any portion of the body, in combination with any pre-existing disability, that permanently prevents the worker from regularly performing gainful and suitable work. The figures are the numbers of claims with awards during the year, minus the numbers rescinded by insurers and through the appeals process. A negative count indicates more PTD awards were rescinded than awarded. The data before 1978 excludes board own-motion cases.

10. Administrative disputes: Counts of the major portions of the DCBS Workers' Compensation Division (WCD) administrative dispute review process. The counts include reconsideration requests on claim closures (but not correcting closures), review requests on disabling classifications, medical dispute requests, and vocational dispute requests. These are dispute resolution processes that were expanded and made mandatory by law in July 1990.

11. Hearing requests: Case counts of the requests for hearings to the Workers' Compensation Board. The board has original jurisdiction on insurer claim denials and certain claims-processing issues, such as time loss and time-loss rate when the claim is open. It also hears appeals of cases decided by WCD administrative review. Counts include settlements received without a prior hearing request.

12. Board review requests: Counts of hearings orders appealed to board review. They exclude third-party, crime victim, noncomplying employer, and nonsubjectivity determination cases.

13. Court of Appeals requests: The number of appeals of board-review orders to the Oregon Court of Appeals.

14. Claim disposition agreements: A claim disposition agreement (CDA) is an agreement between the parties to a workers' compensation claim. The worker agrees to sell back rights (e.g., rights to compensation, attorney fees, and expenses), except medical and preferred-worker benefits on an accepted claim. In other states, this is often referred to as a "compromise and release." CDAs were authorized by law from July 1990. The figures are the orders approved by the Workers' Compensation Board.

15. Return-to-work program use: The count is the total number of Employer-at-Injury Program worker placements, the number of workers starting Preferred Worker Program contracts, and the number of workers who completed vocational assistance with an employment or training plan. Recent figures will change slightly as data is received.

16. Premium: The column provides two data series. (1) For 1977-present, total-system written premiums are shown. The amounts are the sum of direct premiums written for private insurers and SAIF Corporation, earned large deductible premium credits for private insurers, and estimated simulated net premiums for self-insured employers. (2) For 1968-1976, the figures are earned premiums.

17. Benefit average weekly wage: Provides the Oregon average weekly wage (AWW) of workers in covered employment, as determined by the Employment Department, for the last quarter of the calendar year. This is applied to the computation of benefits the following fiscal year. For example, the figure shown for 2009 is used to determine benefits beginning July 1, 2010. The AWW affects the rate of temporary disability, permanent partial disability, permanent total disability, and death benefits.

Data are subject to revision in order to reflect the most accurate information available.
