

Provide 1/2" dia. 7-wire low relaxation strands conforming to AASHTO M203 (ASTMA416), Grade 270, Supplement 1.

Provide an initial tension (after harping deflected strands) of 31.0 kips per strand unless shown otherwise. Deflected strands may be bundled between hold down points.

Provide the same tension as the straight strands after deflecting.

Detension strands alternately about the girder C to limit prestress eccentricity.

MILD STEEL REINFORCEMENT

Provide reinforcing steel as specified in the General Notes for the project unless shown otherwise.

HANDLING PRESTRESSED CONCRETE GIRDERS

Keep girders in an upright position with the support points within 2'-0" of the girder ends.
Provide temporary diaphragm beams as required, see BR350.

DIAPHRAGM BEAMS

*See structure plans for diaphragm beam locations.
Pour transverse beams a minimum of three days before deck pour.
Provide structural concrete inserts:
Expanded coil concrete inserts with closed-back ferrule threaded to receive 1" dia. x 2'-3" rods AASHTO M314, Gr. 36 (ASTM A307) threaded full length.
Brace prestressed girders to prevent lateral deflection during diaphragm pour.*

MIDSPAN SECTION

END VIEW

* $\text{¢ } 1\frac{1}{2}"$ dia. holes in internal girders.
Inserts in exterior girders.

MIDSPAN SECTION
