

Use of Straightline Charts in CAD files

ODOT Straightline Charts are generated by TDD using a custom Visio application. The current version of Visio does not directly export Microstation DGN files.

To acquire a Straightline Chart for use with MicroStation, please collect the following data, as appropriate:

- Highway Name
- Highway Number
- Oregon Route Number
- Milepoints bounding the project

Once this data is acquired, please contact [Jim Gavin](#) at 503-986-3158 or by e-mail. Once Jim has verified the requested information, he will produce and provide a file in .dwg format.

If you have any questions concerning this process, please contact [Gary Holeman](#) at 503-986-3758 or by e-mail.
