Intimate partner violence (IPV) is a serious public health problem that impacts individuals, families and communities across Oregon. Approximately one in six homicides in Oregon in 2016 resulted from IPV.

Many more women than men are killed by intimate partners (Figure 1). Among all female homicide victims aged ≥15 years during 2016, 45% were killed by intimate partners.

The majority of victims are between the ages of 25 and 64 years (73%; Figure 2).
Although 78% of victims are white, African Americans experience the highest rate of IPV homicide (Figure 3).

Notes: All other groups exclude Hispanic ethnicity
Source: Oregon Violent Death Reporting System
Approximately two-thirds of victims killed by an intimate partner were living with the perpetrator when the incident occurred.
