

Information for Veterinarians Concerning Compounded Drugs

PATIENT-SPECIFIC

A patient-specific prescription is required for all controlled substance (CS) medications whether the medication is compounded by a pharmacy or produced by an FDA approved manufacturer.

NON-PATIENT SPECIFIC

- ⇒ Pharmacies outside of Oregon that ship non-patient specific compounded drugs to practitioners in Oregon must hold a manufacturing registration with the Oregon Board of Pharmacy. Practitioners that receive non-patient specific compounded drugs are advised to verify the registration. The registration look-up tool is found at <https://obop.oregon.gov/LicenseeLookup/>.
- ⇒ At this time, Oregon pharmacies may provide non-patient specific, **non-controlled** compounded drugs to practitioners under a Shared Service arrangement with the Oregon Board of Pharmacy.
- ⇒ No pharmacy in or outside of Oregon may provide non-patient specific **controlled** drugs to a practitioner **unless** the pharmacy providing the drugs has, at a minimum:
 1. A manufacturing license with the FDA; and
 2. A manufacturing registration with the Oregon Board of Pharmacy; and
 3. A DEA manufacturing registration (in addition to the standard registration).
- ⇒ Non-patient specific compounded drugs may be used for administration in the clinic.

Practitioners should verify that a pharmacy or facility has all required licenses and registrations.

Questions? Contact the Oregon Board of Pharmacy at 971-673-0001.
