

Flood Control and Levee Safety in Oregon

Bill Owen, P.E. Multnomah County Drainage District
Mike Meyer, P.E. Cornforth Consultants

The levees' protection and impact

40% of Port of Portland facilities

12 Million tons of goods move through Facilities

\$5.3 billion in assessed property value

Across four cities

Residential neighborhoods

Thousands of Oregonians flood safety

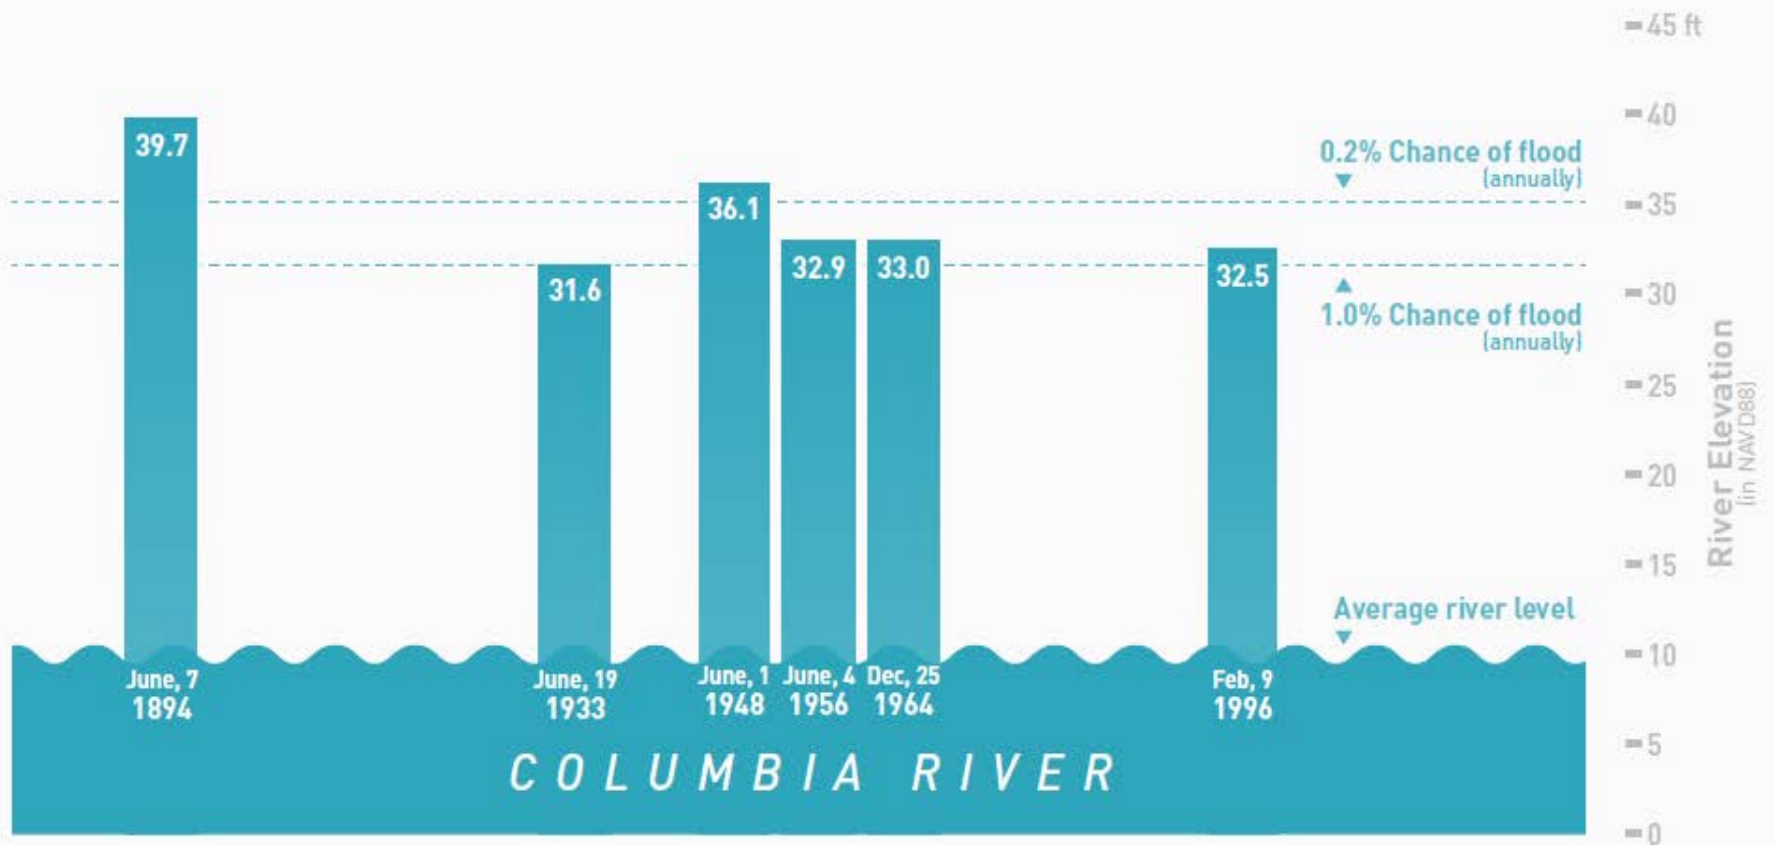

10% of jobs in Multnomah County

Majority in industrial, manufacturing, and transport.

- What is a levee?
- How are the levees formed?

- How is our system different from others?
- Why do we need a levee system along the Columbia River?

High Water Event Timeline

Columbia River at Vancouver Gage

1996 Chinook Landing Marine Park: North of the MCDD Marine Drive Levee

1948 Flood – Railroad Embankment Breach at Vanport

2005: Chinook Landing Marine Park
same structure as pictured above in non-flood conditions

1948 Flood – Columbia Slough breach

Current Challenges

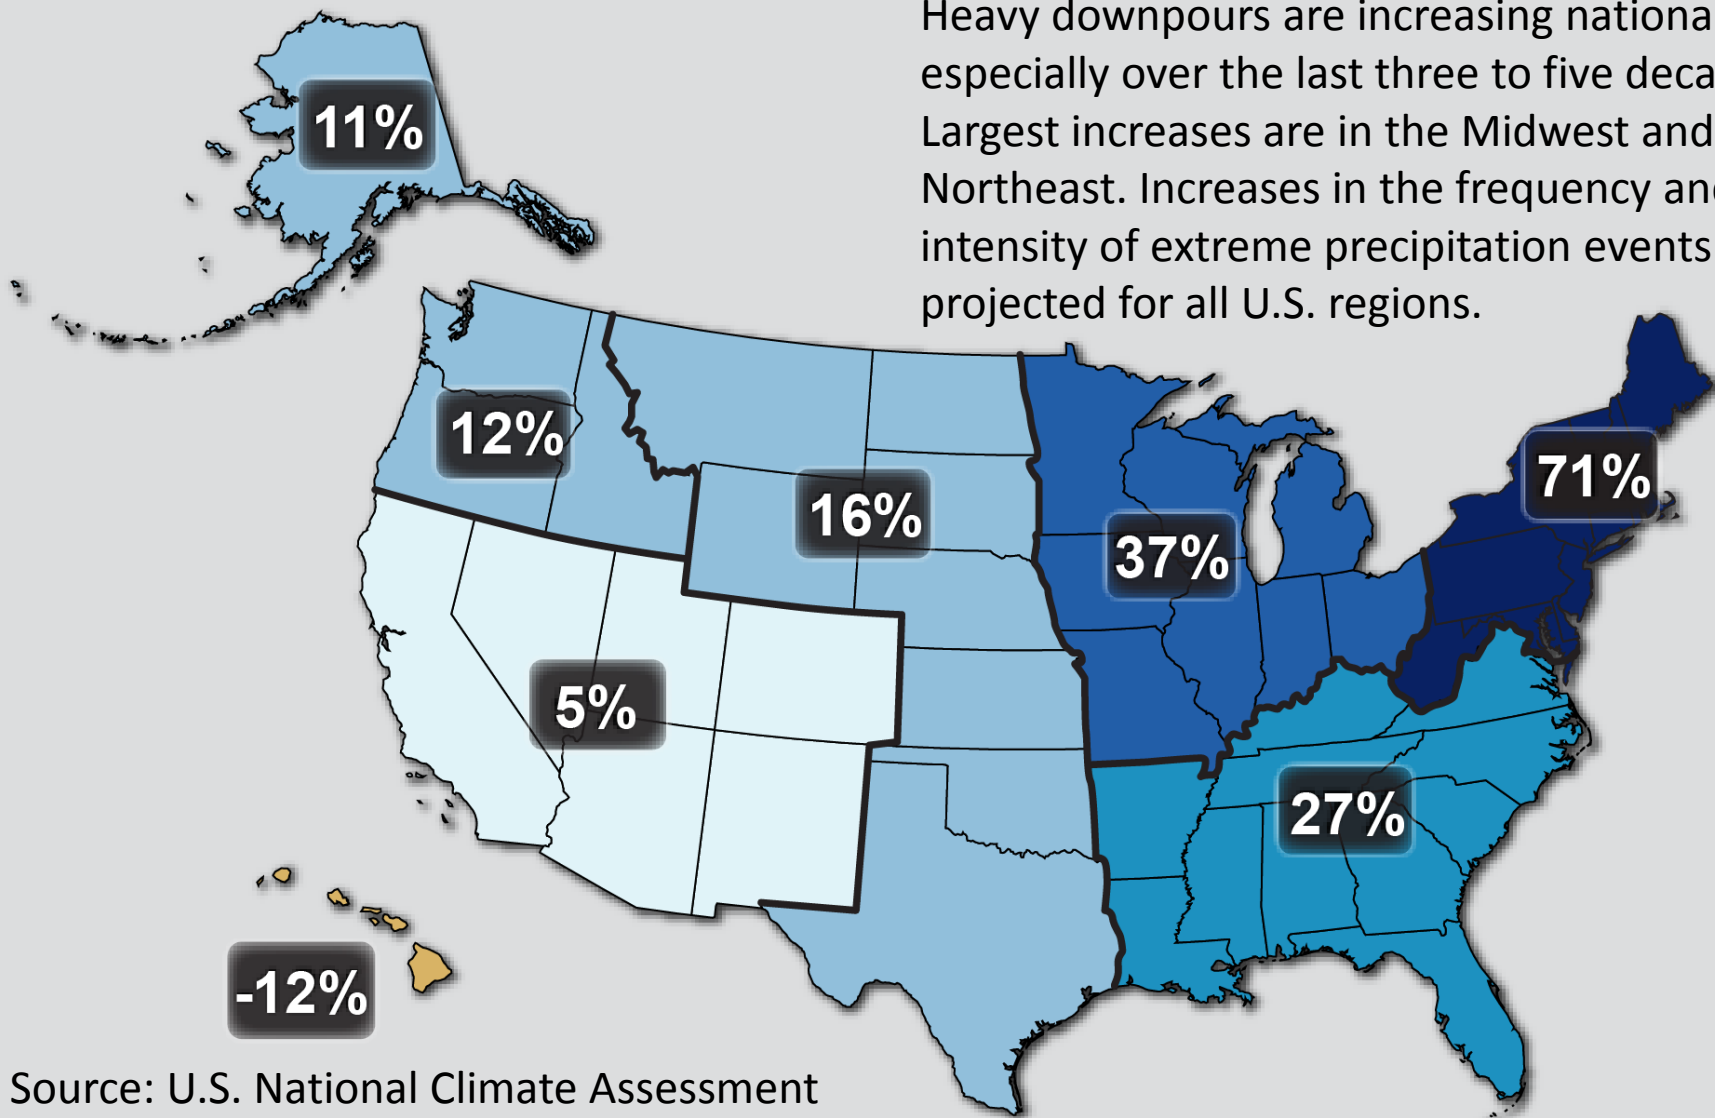

Preserving public safety in a changing climate

Funding and governance

Maintaining status in federal programs

Observed Change in Very Heavy Precipitation

Heavy downpours are increasing nationally, especially over the last three to five decades. Largest increases are in the Midwest and Northeast. Increases in the frequency and intensity of extreme precipitation events are projected for all U.S. regions.

Source: U.S. National Climate Assessment

Flood Protection Infrastructure

- ASCE Report Card gives levees D- nationally
- Historically, improvements have been reactionary
- Cities are learning that investment pays dividends

Federal Emergency Management Agency National Flood Insurance Program

Cities voluntarily participate in the program.

P1 & P2 Status:
Accredited,
not certified

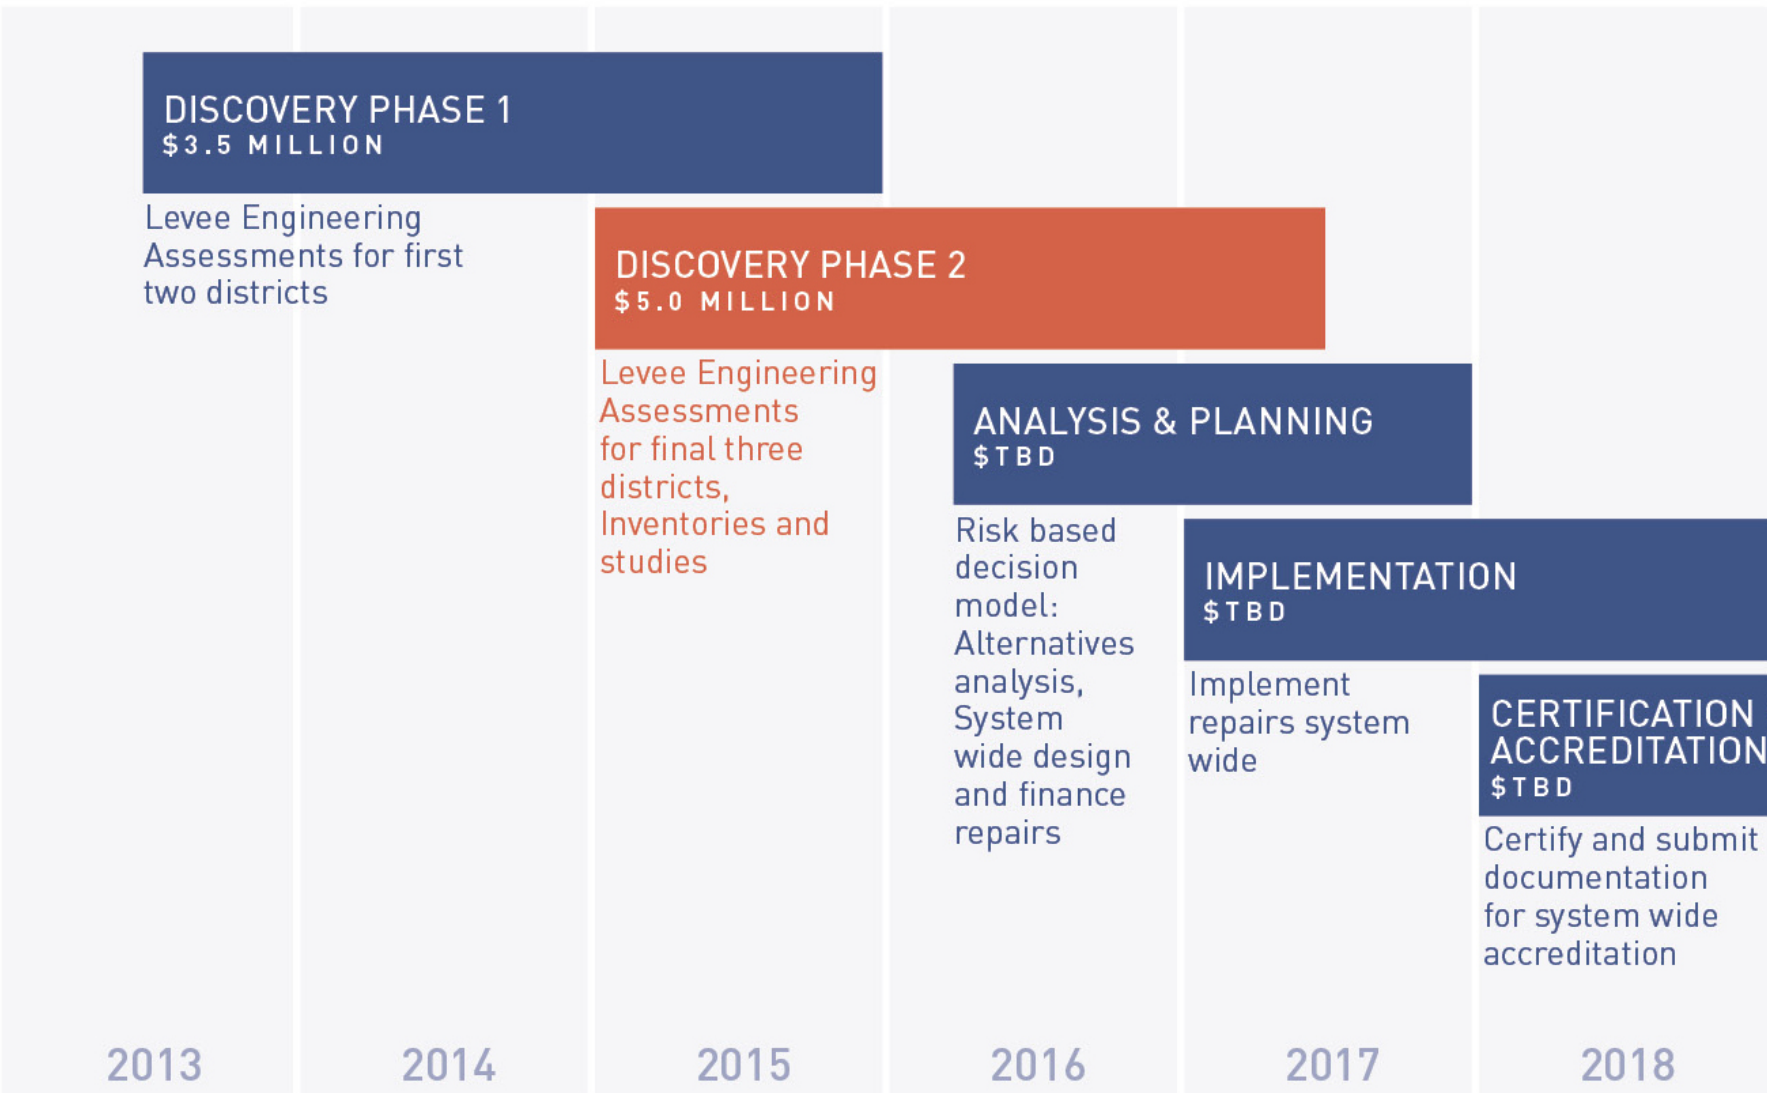

MCDD & SDIC Status:
Accredited,
Certification expires
in 2017

US Army Corps of Engineers plays a limited and defined role.

Why Accredite a Levee?

- Accreditation confirms the levees were constructed and are being maintained to protect against flooding.
- Any issues that prevent accreditation pose public safety risks to the people and property protected by the levees.

Levee Accreditation 101

44 CFR 65.10 Certification Requirements

Also

- Check Closure Structure Design
- Operation and Maintenance Manuals
- Encroachments

What Specialists Needed?

Geotechnical Engineer/ Engineering Geologist

1. Settlement
2. Slope Stability
3. Seepage
4. Encroachment Impacts

Hydrology / Hydraulic Engineer

1. Freeboard Analysis
2. Embankment Protection
3. Interior Drainage

Civil Engineer / Surveyor

1. As-Built Conditions
2. Pump Stations & Outfalls
3. Closures & Flood Walls

Phased Approach

- Phase 1 – Background Review / Gap Study
- Phase 2 – Field & Laboratory Investigations
- Phase 3 – Engineering Analyses
- Phase 4 – Summarize & Submit to FEMA

Drilling Guidelines

- From USACE Manuals / Technical Letters
 1. EC 1110-2-6067 “USACE Process for the National Flood Insurance Program (NFIP) Levee System Evaluation”
 2. ETL 1110-2-569 “Design Guidance for Levee Underseepage”

Design Guidance for Underseepage

1. Need adequate amount of subsurface exploration
2. Minimum of 3 borings every 1,000 feet
3. Performed at riverside toe, landward side toe, and crest
4. Use geophysics in between as needed
5. More borings in urban/problem areas

PEN 1 – Columbia Slough Levee near PIR - 100 Year Analysis

- Railroad Embankment Mixed sand and silt with timber remnants
- Fill Soft, slightly clayey to clayey SILT
- Fill Loose, silty SAND to sandy SILT
- Foundation Soft, clayey SILT (Alluvium)
- Foundation Loose, silty SAND (Alluvium)

SLIP SURFACE	CALCULATED FS	MEETS REQUIRED FS*
1	1.40	YES
2	2.12	YES

*MINIMUM ALLOWABLE FS=1.4, USACE, EM 1110-2-1913

CALCULATED EXIT GRADIENT AT TOE OF LANDWARD SLOPE = 0.3**

**RECOMMENDED MAXIMUM EXIT GRADIENT = 0.5, USACE, EM 1110-2-1913

NOTE: THIS ANALYSIS ALSO SERVES AS THE REVERSE ANALYSIS (SEE FS ABOVE).

PEN 2 – Bridgeton Road Levee - 100 Year Analysis

- Embankment Soft, slightly clayey to clayey SILT
- Embankment Loose, silty SAND to sandy SILT
- Foundation Loose, silty SAND and sandy SILT (Alluvium)
- Foundation Soft, clayey SILT to silty CLAY (Alluvium)

SLIP SURFACE	CALCULATED FS	MEETS REQUIRED FS*
1	5.39	YES
2	1.79	YES

*MINIMUM ALLOWABLE FS=1.4, USACE, EM 1110-2-1913

CALCULATED EXIT GRADIENT AT TOE OF LANDWARD SLOPE = 0.0**

**RECOMMENDED MAXIMUM EXIT GRADIENT = 0.5, USACE, EM 1110-2-1913

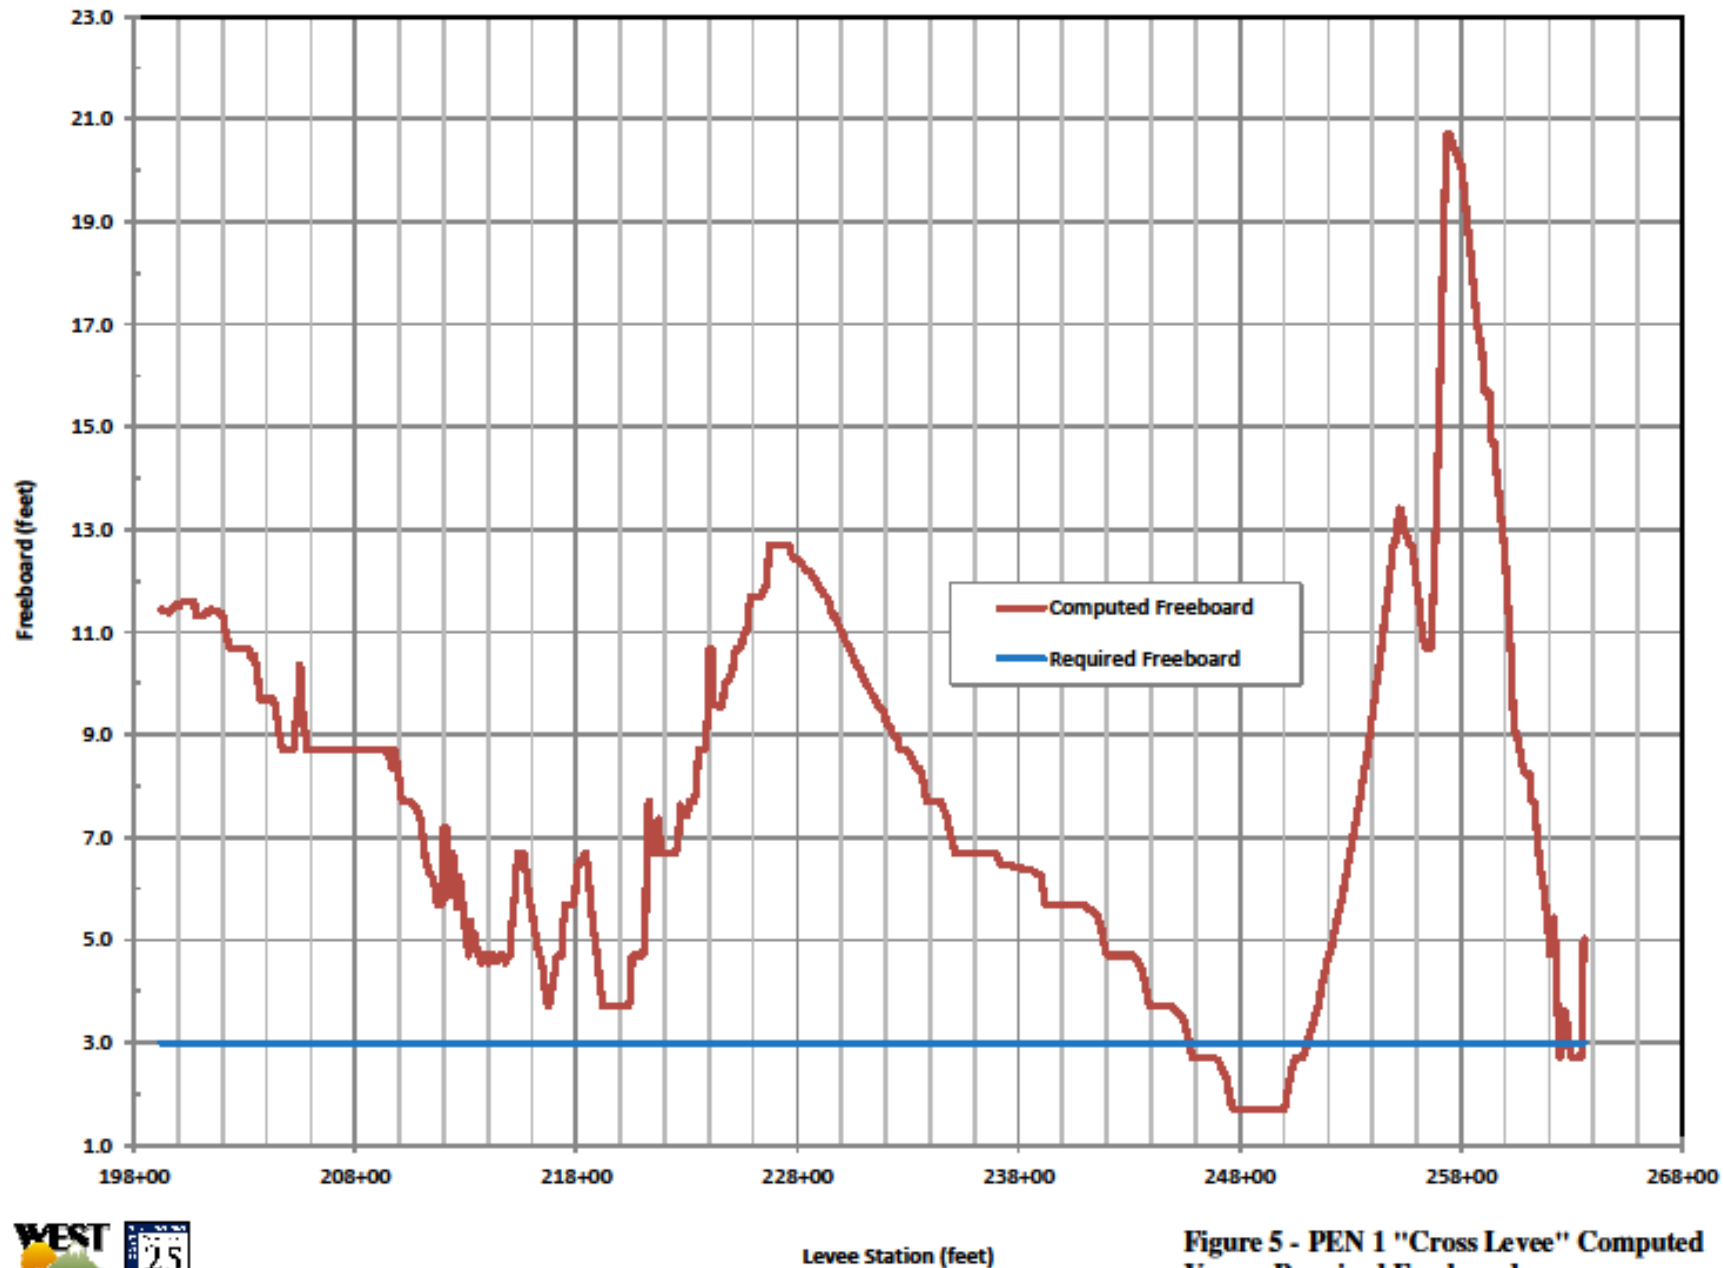

Figure 5 - PEN 1 "Cross Levee" Computed Versus Required Freeboard

Levee Certification Costs Nationwide

*No offshore drilling required

We don't have a flooding problem, we have a land use problem.

Floods are acts of god but flood losses are acts of man.
