

ADPC Treatment Committee

Tuesday, March 12, 2025

For Today's Conversation....

- Focus on high-level priority areas
- Priorities are for the Treatment Committee, and the treatment system - addressing what the treatment system needs from other parts of the system (prevention, recovery, harm reduction) will be addressed as part of the “how.”
- The Committee's recommendations may have regulatory, financial, or data-related implications—we will address those domains as part of the “how” as well.

- Expand access to **medication-assisted recovery**
- Timely access to **appropriate levels of care at all entry points** (Community/justice, etc.)
- Seamless transitions** throughout the care journey
- Drive **quality** in all components of the treatment system

Discussion: Are these the right priorities? Are there any other priorities that are NOT covered within these theme areas?

Developing the “Hows”

- Fiscal Implications (APM Models, etc)
- Regulatory Implications (ASAM)
- Infrastructure Implications (data, state agency engagement, communications/public awareness, etc.)

Thank you!
