Additional thanks:

This report would not have been possible without the support of the authors of the Calculating for an Adequate Systems Tool (CAST) at JG Research. Thank you to Dr. Brandon Green and colleagues for your work to adjust estimates to reflect Oregon-specific counties and regions.

Thank you to all of the organizations and individuals who participated in our substance use disorder service survey, and to the members of the Oregon Alcohol and Drug Policy Commission, Oregon Health Authority, and other key individuals who helped to inform and guide this work, including:

- Tony Vezina, Executive Director, 4D Recovery
- Erin Stack, Research Manager, Comagine
- Gillian Leichtling, Director of Research and Evaluation, Comagine
- Pam Pearce, Executive Director, Community Living Above
- Caroline Cruz, General Manager, Confederated Tribes of Warm Springs Branch of Health and Human Services
- Kevin Baldwin, Program Manager, Consumer Drug Take-Back Solution
- Donald Mazziotti, Chief Executive Officer, Frontline Services PDX
- Victoria Buelow, Alcohol and Drug Lead Research Analyst, Health Promotion and Chronic Disease Prevention Oregon Health Authority
- Eric Martin, Director of Policy and Legislation, Mental Health & Addiction Certification Board of Oregon
- Van Burnham, Finance & Technology, Mental Health & Addiction Certification Board of Oregon
- Fernando Peña, Executive Director, NW Instituto Latino
- Heather Jefferis, Executive Director, Oregon Council for Behavioral Health
- Heather Ray, Project Coordinator, Oregon Council for Behavioral Health
- Suzanne Hidde, Health and Physical Education Specialist, Oregon Department of Education
- Dan Hoover, Addiction Medicine Physician, Oregon Health & Science University
- Honora Englander, Professor of Medicine, Oregon Health & Science University
- Todd Korthuis, Addiction Medicine Physician, Oregon Health & Science University
- Stephanie Renfro, Associate Director, Oregon Health & Science University Center for Health Systems Effectiveness
- Jude Leahy, Viral Hepatitis Prevention Coordinator, Oregon Health Authority
- Julia Dilley, Senior Research Scientist, Oregon Health Authority
- Shelagh Johnson, Adolescent & School Health Policy & Partnerships Specialist, Oregon Health Authority
- William Burchard, Analyst, Oregon Health Authority
- Dr. Anthony Biglan, Senior Scientist, Oregon Research Institute
- Jerrod Murray, Executive Director, Painted Horse Recovery
- Denise Acker, Operations Manager, Synergy Health Consulting

Executive Summary
The OHSU-PSU School of Public Health, in collaboration with the Oregon Health Authority and the Oregon Alcohol and Drug Policy Commission, conducted a rapid assessment of the state’s substance use disorder services between September 2021 and September 2022.*

Key Findings
• All 36 Oregon counties showed violent crime, high alcohol outlet density, and low social association rates as Oregon’s most substantial contributors to risk of hospitalization for a substance use disorder.
• There is a 49% gap in substance use disorder services needed by Oregonians.
• Most substance use disorder service providers lack capacity to meet demand for services.
• Statewide gaps in equity and access include insufficient provision of culturally relevant services to protected classes, language interpretation and translation services, and a workforce that does not represent the demographics of the state.
• Barriers to substance use disorder services persist in both transportation and technology.
• Among Oregon Health Plan members, rates of substance use disorder diagnoses suggest that less than half of those with a use disorder have been diagnosed or treated.
• There is a 51% gap in healthcare providers authorized to prescribe buprenorphine. Among surveyed facilities offering medications for opioid use disorder, half dispensed buprenorphine or naltrexone, while less than one third were certified Opioid Treatment Programs licensed to dispense methadone.
• Fewer than one in five surveyed providers offering harm reduction reported that they provided drug checking or syringe services.

Recommendations
• Treat encounters in the emergency department, hospital, shelters and justice systems as opportunities for connection to community treatment and naloxone distribution.
• Incentivize equitable distribution of linguistically and culturally relevant services.
• Address gaps in substance use disorder workforce, including both prescribers and credentialed staff providing essential prevention services and recovery supports.
• Increase support for service organizations to employ and bill for certified peer support specialists across the continuum of substance use disorder care.
• Invest in syringe service and other harm reduction programs, including drug checking.
• Expand access to medications for opioid use disorder through provider training, telemedicine, mobile services, and reduced wait times and insurance pre-authorization.
• Prioritize strategies that target affordable housing, education, and employment to reduce risk of substance use disorders and their consequences and to support long term recovery.

* Please note that the current project was developed prior to passage of the Drug Addiction Treatment and Recovery Act (Measure 110), and data collection and analysis were underway during the selection of behavioral health resource network (BHRN) grantees in all 36 counties.
About the Inventory and Gap Analysis Process

What Is It?

In collaboration with the Oregon Health Authority and Oregon Alcohol and Drug Policy Commission (ADPC), researchers from the Oregon Health & Science University – Portland State University School of Public Health (OHSU-PSU SPH) conducted an inventory and gap analysis of service delivery resources available in Oregon to address substance use disorder prevention, harm reduction, treatment, and recovery.

In support of the ADPC’s 2020-2025 Oregon Statewide Strategic Plan,¹ the Oregon Substance Use Disorder Services Inventory and Gap Analysis project focused on select services for substance use disorder prevention, harm reduction, treatment, and recovery, bringing health equity issues to the forefront. Key objectives included estimating by county, region, and statewide:

- County level risk of hospitalization due to a substance use disorder;
- Number of Oregonians experiencing a substance use disorder;
- Number of Oregonians in need of but not receiving treatment at a specialty facility for a substance use disorder;
- Gaps in select substance use disorder prevention, harm reduction, treatment, and recovery services; and
- Gaps in access, health equity, and other barriers to substance use disorder care.

Throughout the report, references to the substance use disorder continuum of care incorporate the following definitions of prevention, harm reduction, treatment, and recovery services:

- **Prevention**: Prevention services target factors most closely associated with increased risk for substance use across the life span. Prevention strategies include family- and school-based intervention programs; decreasing the availability and marketing of harmful products; reducing access to substances for underage persons; increasing the perception of harm; decreasing over-service of alcohol in restaurants, bars, and retail locations; increasing the use of health-promoting laws and policies; strengthening the use of effective early intervention and harm reduction strategies; increasing access to alternative pain and stress management therapies; and strengthening and expanding the prevention workforce.¹

- **Harm Reduction**: Individuals deserve services that promote health, regardless of whether they use drugs. Harm reduction is a set of practical strategies and ideas aimed at reducing negative consequences associated with drug use.² Harm reduction strategies are supported by evidence and compassion, such as distributing naloxone to rapidly reverse an opioid overdose or providing fentanyl test strips to check for contaminated

---

¹ Substance is defined as alcohol and other drugs, including cannabis but excluding tobacco/nicotine. Other key definitions of terminology used throughout this report are provided below.
substances, and minimize the negative consequences of drug use.\textsuperscript{3} This report tabulates the following harm reduction services: syringe service programs, fentanyl test strip distribution, non-abstinence-based services, overdose prevention and reversal services, and providing information on safer drug use.

- **Treatment**: Treatment helps people disrupt addiction’s powerful effects on the brain and behavior and regain control of their lives.\textsuperscript{4} Evidence-based treatments for substance use disorder can reduce substance use, related health harms (for example, infectious disease transmission), and overdose deaths. There are many kinds of treatment such as inpatient, live-in care in residential or hospital settings, treatment in an outpatient setting, and medications for the treatment of opioid use disorders. Effective treatment strategies focus on reducing barriers to accessing the most effective treatments, using motivational and cultural enhancements to encourage those who might be reluctant, advancing strategies to improve engagement and retention, and continuing to develop new therapeutic approaches.

- **Recovery**: Recovery is a process of change through which individuals improve their health and wellness, live a self-directed life, and strive to reach their full potential.\textsuperscript{5} Recovery does not follow a linear process - it is ongoing and not time-limited. There are multiple access points and routes to recovery. Common dimensions that support a life in recovery include health, such as management of one’s disease(s) or symptoms and making informed, healthy choices that support physical and emotional well-being; home, having a stable and safe place to live; purpose, obtaining independence, income, and resources to participate in society, such as a job, school, volunteerism, or other creative endeavors; and community, relationships and social networks that provide support, friendship, love, and hope.\textsuperscript{6}

**Why Was It Done?**

*Oregon ranks 6th in the nation for deaths due to alcohol.*\textsuperscript{7} In Oregon, excessive alcohol use is the third leading cause of preventable death and is responsible for over 2,000 deaths annually.\textsuperscript{8} Between 2010 and 2020, the annual rate of alcohol related deaths in Oregon rose from 38.6/100,000 to 43.7/100,000. Diseases related to excessive alcohol use and misuse include cancer, liver disease, diabetes, and alcohol dependence, and related injuries include those from motor vehicle crashes and violence.\textsuperscript{9} In 2020, Oregon ranked 5th in the US for the percentage of alcohol-impaired traffic fatalities; alcohol impairment was associated with 38% of all traffic fatalities.\textsuperscript{10}

*Oregon ranks 2nd in the nation for deaths due to drug use.*\textsuperscript{11} As of 2021, overdoses involving multiple substances accounted for over half of Oregon’s fatal overdoses.\textsuperscript{12} From 2000 to 2018, Oregon’s death rate from drug overdose increased from 9.13/100,000 annually (313 deaths) to 13.63/100,000 (571 deaths).\textsuperscript{13} Post pandemic, the Oregon Health Authority reported a nearly 70\% increase in overdose deaths between April/May 2019 and April/May 2020.\textsuperscript{14} In 2020, opioid-involved deaths accounted for 73\% of drug overdose deaths, with fentanyl contributing to about 40\% of those.\textsuperscript{14}
Oregon ranks 1st in the nation for percent of population needing but not receiving treatment for substance use disorders.\textsuperscript{15} Oregon ranks 1st in the nation for percent of population (ages 12 and older) with illicit drug use disorder in the past year (9%), 2nd for percent of population (ages 12 and older) experiencing a substance use disorder in the past year (18%), and 5th for alcohol use disorder in the past year (12%).\textsuperscript{15} An estimated 22% of Oregonians aged 12 or older reported binge alcohol use in the past month, and an estimated 4.3% of Oregonians aged 12 or older used an illicit drug other than marijuana in the past month.\textsuperscript{16} Substance use disorder treatment needs among Oregon’s justice-involved populations are significantly higher. Among the 12,020 adults in custody in Oregon’s prisons, over half have a documented substance use dependence or addiction.\textsuperscript{17} An additional 14% have a known history of some substance use.\textsuperscript{17}

Understanding Gaps in Oregon’s Prevention, Treatment, and Recovery Services

Responding to the urgent call for population-level estimates of need and service capacity as described in the 2020-2025 Oregon Statewide Strategic Plan\textsuperscript{1} and the Oregon Tribal Behavioral Health Strategic Plan – 2019 to 2024,\textsuperscript{18} this report can be used to inform strategies and prioritize resource allocation more effectively by identifying counties and regions in Oregon where significant service gaps exist. The Oregon Substance Use Disorder Services Inventory and Gap Analysis project is a critical first step towards documenting currently available services; identifying the need for substance use disorder prevention, harm reduction, treatment, and recovery services across the state; and assessing gaps in services at the state, regional, and county-levels. In addition, this work supports the establishment of baseline service capacity data to enable measurement of progress toward the goal of building and implementing a comprehensive and sustainable statewide system.\textsuperscript{1}

How Was It Done?

A rapid assessment was conducted from September 2021 through September 2022, employing a four-pronged approach:

- Conducted a needs assessment using data from the National Survey on Drug Use and Health and Oregon Health Plan billing data to estimate the need for substance use disorder services in each county or region in Oregon.
- Developed a substance use disorder services directory of prevention, treatment, and recovery organizations in each Oregon county to inform the needs assessment and gap analysis process. Collected organization-level information to establish a baseline to measure current system capacity and contacted organizations through the substance use disorder services survey.
- Applied the Calculating for an Adequate System Tool (CAST) to generate estimates of risk and service capacity need that can help inform statewide planning efforts to improve the system of substance use care.\textsuperscript{19,20} The CAST utilizes information from the needs assessment as well as from literature reviews and Oregon specific utilization of
services to calculate an estimated number of services needed. The estimated services
needed are compared to workforce data and information collected through the
substance use disorder service survey to identify gaps in substance use disorder
services.
- Conducted a **substance use disorder services survey** to obtain additional context and
information in support of the CAST findings as well as other important gaps in access
and health equity. Throughout the report this is referred to as the “Survey.”

A brief summary of the approach follows.

**Needs Assessment**

*National Survey on Drug Use and Health*

The National Survey on Drug Use and Health (NSDUH) is a nationwide household survey that
provides up-to-date information on self-reported alcohol and drug use. Data are provided at
the state and regional levels, and for the United States as a whole. Each year, NSDUH interviews
approximately 70,000 people ages 12 and older. Study results are released each fall and are
used to inform public health programs and policies. In most cases, the survey is completed by
the participant using a computer, tablet, or mobile device. As a result of the household-based
sampling methodology, unhoused populations, incarcerated populations, and those in
hospitals, nursing homes, or other congregate facilities are not represented in the data. As
such, the reported prevalence estimates may be underestimated.

Despite its limitations, NSDUH provides the most comprehensive self-reported data available
about substance use and substance use disorders available in the United States, offering a
baseline estimate of the number of people who use or misuse specific substances, number of
people with use disorders, as well as the number of people needing but not receiving treatment
at a specialty facility for use disorders. NSDUH’s classification of use disorders are based on
criteria from the Diagnostic and Statistical Manual of Mental Disorders, 5th edition (DSM-5).
NSDUH classifies individuals as needing treatment if the individual meets the DSM-5 criteria for
a drug use disorder and did not receive treatment, received treatment for a use disorder at a
specialty facility but reported they needed additional treatment, or used substances without a
DSM-5 classified diagnosis but reported a need for treatment.

NSDUH data are reported at the national, statewide, and substate level. We utilized the 2016-
2018 regions defined by NSDUH and as shown in **Figure 1**. To create county and region
estimates of use and use disorders, NSDUH state or region estimates were applied to 2020 US
Census population data for the associated age groups. Regions were used to estimate region
use estimates for most substances. In some cases, statewide or national data were used if
region estimates were too small or not reported. In 2020, NSDUH began using the DSM-5 use
disorder criteria in its estimates, but these updated criteria have not yet been applied to
regions. Therefore, we used NSDUH 2020 state level prevalence estimates for all estimates
about use disorders and those needing but not receiving treatment at a specialty facility for a
use disorder. The needs assessment data by county is available in **Appendix A**.

**Oregon Health Plan Data**

The Oregon Health Authority estimates that that there were nearly 73,000 emergency department visits and 17,000 hospital admissions for overdose in 2021.\(^{12}\) As reported in the Oregon Criminal Justice Commission’s 2019 Analysis of Oregon’s Publicly Funded Substance Abuse Treatment System, Oregon was estimated to spend $472M ($236M/year) on substance use prevention and treatment-related services.\(^{30}\) Medicaid spending accounted for 63% of those dollars, with a 59% increase in per capita expenditures from 2010 to 2017.\(^{30}\) To inform the current inventory and gap analysis with regard to current demand for services, Oregon Health & Science University’s Center for Health System’s Effectiveness (CHSE) updated their analysis using 2020 Medicaid claims data to estimate diagnosed substance use disorder diagnoses and treatment among Oregon Health Plan members, by age group. If the total number of Oregon Health Plan members in any given category is less than 11 people, a range of 1 – 10 is shown in place of the actual number to protect individuals. This data is available by region because the findings were too small to report at the county level.
**Access and Equity: Oregon Substance Use Disorder Workforce**

Health of a community is improved when the health care workforce is representative of the population it serves.\(^3^1\) As part of the needs assessment, we analyzed workforce data previously collected by the Mental Health & Addiction Certification Board of Oregon (MHACBO) and the Oregon Health Authority to compare Oregon’s 2020 US Census demographics to the substance use disorder workforce. The workforce demographic data are comprised of demographic information about the county, prescribers (including physicians, nurse practitioners, and physician assistants), and non-prescribers (including Qualified Mental Health associates, Qualified Mental Health professionals, Certified Alcohol and Drug Counselors, and Certified Prevention Specialist). Information about demographics of the prescribing workforce was only available at the state level.

**Substance Use Disorder Services Directory**

An inventory of known services available across Oregon was compiled prior to conducting outreach to collect details about organization-level services in all Oregon counties. An initial list was compiled with support from the Oregon Council for Behavioral Health and Lines for Life, both with recently maintained lists of accredited substance use disorder organizations across the state. This list was cross referenced with [Oregon Health Authority’s monthly release of the Oregon Substance Use Disorders Services Directory].\(^3^2\) Additionally, OHSU-PSU SPH staff presented at various stakeholder meetings about this project, sharing the service list directly with others to help identify organizations that may have been missing from the initial list. Participating organizations were asked to identify additional substance use disorder services in their county to include in the process. Appendix B details the inventory or “directory” of services compiled during the rapid assessment.

**Calculating for an Adequate System Tool**

The Calculating for an Adequate System Tool (CAST) is a method for evaluating the capacity of the substance use disorder care system within a defined geographic area and provides users with both a risk assessment of county-level social and community determinants of substance use disorders, and an assessment of local service need across the continuum of care. Most often, the CAST has been used to estimate need for a county as the geographic unit,\(^3^3–^3^5\) but it can be used for smaller or larger areas so long as data at those geographic levels is available or could be produced at scale. The CAST methodology was developed by an interdisciplinary group of researchers at the Substance Abuse and Mental Health Services Administration (SAMHSA) Center for Behavioral Health Statistics and Quality (CBHSQ).\(^1^9\) Subsequent development and applications of the CAST were undertaken by JG Research & Evaluation.\(^2^0\)
In close collaboration with JG Research, we applied the CAST to assess the capacity of Oregon’s substance use disorder service system by county, region, and statewide. The CAST includes service categories along the substance use disorder continuum of care including universal prevention, harm reduction, recovery support services, inpatient and outpatient treatment services, and treatment workforce, and produces community specific assessments of the capacity of the components of a community substance use disorder care system. Further, the CAST estimates recommended volume of services based on demographic characteristics correlated with adverse substance use outcomes within communities. 20

Included in this report are three core elements of the CAST:

1. **The risk score** is a calculation of a county/region’s risk contribution of social determinants of health and health disparities to the likelihood that a county/region’s hospitalization rate for substance use disorders will be above the national median hospitalization rate for alcohol or other substance use diagnoses. This score is calculated by assessing community characteristics that contribute to the population’s risk of a substance use disorder related injury.

2. **The risk level** provides a color-coded, visual benchmark about a county/region’s general risk level, which is associated with the Risk Score.

3. The CAST estimates needed number of services using local inputs, including county demographic information and NSDUH estimates of substance use and use disorders and the number of individuals needing but not receiving treatment in the past year for the most commonly misused substances. Data inputs and sources are detailed below.

The following information provides guidance on how to interpret the CAST risk scores. Counties with a **moderate risk** score (a score of 10 to 20), have a 35-67 % likelihood of having a hospitalization rate above the national median hospitalization rate for drug/alcohol diagnosis. Counties with a **high risk** score (a score of 21 to 33), have a 69-92 % likelihood of having a hospitalization rate above the national median hospitalization rate for a drug/alcohol diagnosis. The CAST identified the national median hospitalization rate for a drug/alcohol diagnosis as 115 per 100,000 people in the population. 20  **Table 2** outlines the data sources used to calculate the CAST Risk Score in Oregon.
**Table 2.** Description and sources for data inputs used for CAST Risk Score.

The **service gap** is estimated by comparing the CAST estimate for services needed by the number of services actually present in a community. In order to calculate the number of services needed, the CAST utilizes data about the community, as well as a variety of factors such as frequency of service, typical capacity of services, service usage rates, and NSDUH estimates of use or use disorders. New CAST service categories utilized in this Oregon specific report include Certified Prevention Specialist, Certified Alcohol and Drug Counselors, Qualified Mental Health Associates and Professionals, as well as inpatient and outpatient treatment categories, which collapse the American Society of Addiction Medicine classifications.

We estimated number of existing services through either our survey or through previously collected data sources. For example, data regarding distribution of naloxone were collected through the survey as there were no county level pre-identified sources of this information; data regarding number of certified prevention specialists were provided by the Mental Health & Addiction Certification Board of Oregon (MHACBO). A full list of data components and sources are provided in Table 3, which outlines all the capacity components measured with the CAST tool for this project, definitions for the component and their units of measurement, and the data used to calculate the current capacity across each component in Oregon. CAST estimations about number of needed services and county risk scores are intended to guide and inform decision-making, not to assess or critique a county’s success.

Substance Use Disorder Services Survey
A web-based survey tool was developed and implemented to collect detailed information on service capacity across prevention, treatment and recovery providers in Oregon (referred to here as the “survey”). The survey was designed around the goals and objectives of the Oregon Alcohol and Drug Policy Committee’s Strategic Plan, which includes information about health equity and barriers in access to care, as well as the information needed for the CAST capacity analysis, as described above.

The full survey instrument is included in Appendix C. Survey items included:

- Types of services provided across the continuum of care;
- Services specific to a population, including services created specifically for people of a particular race/ethnicity, religion, gender, sexual orientation, disability, or veteran status;
- Service accessibility, such as service provision in multiple languages and barriers to transportation;
- Primary mechanisms of funding and whether funding amounts are currently adequate to carry out the organization’s mission;
- Service capacity; and
- Items to assess issues of access and equity in substance use disorder services.

During the development stage, OHSU-PSU SPH researchers met with key stakeholders and community members who work in different sectors of the substance use disorder continuum of care to gain feedback and further refine the survey tool.

OHSU-PSU SPH staff conducted outreach and individual queries of all substance use disorder organizations identified through the substance use disorder service directory (Appendix B). Data collection began on February 16, 2022 and concluded on June 30, 2022. Outreach was initiated through phone calls or emails to collect or confirm contact information at each organization. Organizations had two options to complete the survey: 1) the organization’s identified representative could schedule a phone interview with an OHSU-PSU SPH research staff member; or 2) organizations could complete an online, self-directed version of the survey on their own time. Phone interviews were conducted whenever possible.

When available, stakeholders provided introductions and connections to contacts at other organizations across the state, helping to increase responsivity. The first wave of data collection began with outreach to organizations who primarily provide treatment services. The second and third waves of data collection were focused on connecting with recovery organizations, followed by prevention organizations or initiatives with a survey tailored to measure prevention-based resources. Staff maintained a detailed communication log, noting outreach attempts and details about any challenges connecting with a specific organization or location.
Findings

Findings from the needs assessment, application of the CAST methodology, and a comprehensive substance use disorder services survey indicated gaps in services across the substance use disorder continuum of care in all Oregon counties. The needs assessment and the CAST quantified regional service needs and estimated gaps in services to meet that need. The survey findings contextualized the CAST risk scores and revealed further gaps in workforce, funding and health equity across the state.

Key findings for the needs assessment, CAST, and survey are presented here. Information by county is included in the County Profiles section at the end of the findings. Detailed needs assessment findings by region and county are included in Appendix A, and the substance use disorder services directory is included in Appendix B.

Needs Assessment

National Survey on Drug Use and Health: Substance use, substance use disorders, and unmet need for treatment services in Oregon

In most cases, the NSDUH survey data are robust for Oregon at the county or regional level and may be used to estimate prevalence of substance use and use disorders, as well as an estimated need for services. Please note that the findings from the NSDUH survey are not generalizable to unhoused and incarcerated populations or those housed in hospitals, nursing homes, or other communal dwellings, who were excluded from the national sample.

The following tables highlight statewide data, by the age groups 12 to 17, 18 to 25, age 26 and up, and ages 12 and up. NSDUH estimates are not created for people under age 12. For substance use estimates, we also included the NSDUH region estimates for ages 12 and up. For all county and region-specific data, please see Appendix A.

Table 4 includes the statewide number and percent of Oregonians who reported specific substance use, including binge alcohol use in the past month, marijuana use in the past month, heroin use in the past year, and methamphetamine use in the past year. Across the state, estimated prevalence of binge alcohol use were highest across these substances (22% of Oregonians age 12 and up). This accounts for over 800,000 people in the state. Binge alcohol use and marijuana use in the past month were highest among those ages 18 to 25, while heroin use and methamphetamine use in the past year were highest among those ages 26 and older.

<sup>a</sup>Data adapted from NSDUH 2020<sup>16</sup>

<sup>b</sup>Total US and Oregon estimates for heroin use, past year is for the age group 18 and up, as there was no data available for people in the age group 12 – 17.<sup>16</sup>

<sup>c</sup>Region data available from 2016-18 NSDUH release<sup>28</sup>
Table 5 details the estimated prevalence of substance use disorders among Oregonians across age groupings, as well as estimated prevalence of people who are needing but not receiving treatment at a specialty facility for a substance use disorder in the past year. NSDUH’s definition of substance use/disorder includes illicit drugs, alcohol and marijuana. Again, the highest rates of substance use disorder were among Oregonians ages 18 to 25, at 28.83 % \(^{16}\). The 18 to 25 age group also accounts for the largest number estimated to be needing but not receiving treatment at a specialty facility for a substance use disorder in the past year.

\(^a\)Data adapted from NSDUH 2020\(^{16}\)
Observing sub-types of substance use disorders (Table 6 and Table 7), the trend continued among those ages 18 to 25 in having the highest estimated prevalence of specific use disorders.

Table 6 shows alcohol use disorder prevalence in Oregon by four age groupings, as well as those needing but not receiving treatment at a specialty facility for an alcohol use disorder in the past year. Alcohol use disorders were estimated to affect over 450,000 people in Oregon, with approximately 354,380 people needing but not receiving services in a specialty facility. Similar to the substance use disorder findings shown in Table 2, alcohol use disorder prevalence is highest among people ages 18 to 25, with 14.81% estimated to have an alcohol use disorder.

Oregon Health Plan Data on Substance Use and Use Disorders, 2020

Table 8 includes the percent of the population enrolled in the Oregon Health Plan (Medicaid), as well as the prevalence of Oregon Health Plan members with a documented alcohol use disorder, opioid use disorder, “other” stimulant use disorder, and substance use disorder, by age group. See Appendix A for Oregon Health Plan data by region.

Percent of the Oregon population with Oregon Health Plan (Medicaid) was highest among people age 12 to 17, accounting for 53.8% of the population in that age group. Among Oregon Health Plan members ages 26 to 64, 5% received billable services associated with an alcohol use disorder diagnosis; 1.4% received services for an “other” stimulant use disorder, and 11% received services associated with a diagnosed substance use disorder.

*Based on administrative claims data, substance use disorder categories are not mutually exclusive.*

\(^a\)A range appears in place of data suppression due to small cell size, <11 cases.

\(^b\)Other Stimulant Use Disorders include use disorders associate with use of sedatives, hypnotics, anxiolytics, hallucinogens, inhalants, and other psychoactive substances.

\(^c\)Substance use disorders include all people who have one or more use disorders.
Access and Equity: Oregon Substance Use Disorder Workforce

Health of a community is improved when the health care workforce is representative of the population it serves. Figure 2 demonstrates gaps in the healthcare workforce in comparison to the demographics of the state. The largest disparities in Oregon’s substance use disorder workforce were evident among people who are Hispanic or Latino. While 13.2% of Oregonians are Hispanic or Latino, only 6.3% of non-prescribers and 0.4% of prescribers in the substance use disorder workforce are part of this demographic. Gaps in prescribers persisted across Black/African American, American Indian/Native Alaskan, Native Hawaiian/Pacific Islanders, and multi-racial populations.

Substance Use Disorder Services Directory

After compiling a list of substance use disorder service organizations and their locations, a total of 1,637 service locations were identified across the continuum of substance use disorder care. Research staff reviewed the list to remove redundancies and verify that each service location was still open and offered substance use disorder prevention, treatment or recovery services. The final inventory includes contact information for 756 service locations statewide. See the [substance use disorder services survey](#) section for more information about identified
organizations with multiple service sites, and Appendix B for the full inventory of service locations identified.

Calculating for an Adequate System Tool (CAST)

Table 9 outlines the characteristics that contributed to Oregon’s CAST Risk Score, with the characteristics contributing the most risk at the top, and the least amount of risk at the bottom. In Oregon, the characteristics that contributed the most to the CAST risk score include percent of population with access to physical activity, percent of population with college degrees, alcohol outlet density, and the social association rate per 100,000 people.

Table 9. CAST community characteristics contributing to CAST risk score, statewide

<table>

Counties within NSDUH Regions: Region 1: Multnomah; Region 2: Clackamas, Washington; Region 3: Benton, Clatsop, Columbia, Lane, Lincoln, Linn, Marion, Polk, Tillamook, Yamhill; Region 4: Coos, Curry, Douglas, Jackson, Josephine, Klamath; Region 5: Crook, Deschutes, Jefferson; Region 6: Baker, Gilliam, Grant, Harney, Hood River, Lake, Malheur, Morrow, Sherman, Umatilla, Union, Wallowa, Wasco, Wheeler
**Figure 3** provides a visualization of the CAST Risk scores across all counties in Oregon, with lighter yellow colors indicating a lower risk score, and darker red colors indicated a higher risk score. Risk scores in Oregon ranged between 14 to 23 on a scale of 0 to 33. In Oregon, 28 counties had a risk score designation of “moderate” (a score of 10 to 20) and eight counties had a risk scored designation of “high” (a score of 21 – 33), suggesting that all counties in Oregon had higher risk of hospitalization rates for a drug/alcohol diagnosis than the national median.

**Figure 3. CAST risk of hospitalization for alcohol or drug use by county**

Risk scores can range between 0 to 33. In Oregon, risk score calculations fell between 14 to 23
CAST risk score analysis developed by JG Research

**Table 11** shows the overall service gaps statewide and by region in Oregon. CAST estimations about number of needed services and county risk scores are intended to guide and inform decision-making, not to assess or critique a county’s success. Based on the CAST model, overall, Oregon had a 49% gap in substance use disorder services statewide. This number is based on the CAST recommended number of services compared to the actual number of services. A 49% gap in services means that given the total number of recommended services in Oregon, an estimated 49% of them were missing. The gaps persisted across all parts of the substance use disorder continuum of care. Overall, substance use disorder service gaps regionally ranged from 39% in Region 6 (Baker, Gilliam, Grant, Harney, Hood River, Lake, Malheur, Morrow, Sherman, Umatilla, Union, Wallowa, Wasco, and Wheeler Counties), to 72% in Region 2 (Clackamas and
Washington Counties). The overall service gap by county and service categories are included in the state and county profile section of the report.

**Table 12** highlights the CAST recommended number of services for the state. The recommended number of services is compared to the estimated number of existing services in Oregon, and allows us to generate an estimate of the number of services missing, referred to here as “gap in services.” These select substance use disorder services are organized by substance use disorder workforce, substance use disorder specific facilities, and resources or programming. Across Oregon, gaps were observed in each of these categories. Among the substance use disorder workforce, the largest gaps were among Certified Prevention Specialists, with an estimated 906 more positions needed (94% gap), and Qualified Mental Health Professionals, with an estimated 11,740 more people needed (93% gap). Across substance use disorder facilities, the largest gap estimated by the CAST was Recovery Community Centers, with an estimated 137 more centers needed statewide (94% gap). Among substance use disorder programs and resources, the largest gap was syringe service programs, where an estimated 61 more programs are needed to meet Oregon’s need (58% gap). County-level data are available in the county profiles.

*Estimates of need and service gaps produced using the Calculating an Adequate System Tool (CAST)*

**Substance Use Disorder Services Survey**

Survey findings are presented below at the state level. Either county or regional level data from the survey are found in the county profiles. Note that the survey does not include a complete representation of all substance use disorder services statewide and is not necessarily generalizable to all prevention, treatment and recovery services offered within Oregon. In addition, due to already compiled databases and CAST definitions, treatment services are better represented in the current survey compared to prevention and recovery. Additional efforts will be required to better reflect the scope of prevention and recovery services available in Oregon, and the diverse workforce required to fully meet the need of Oregonians.
Participating Organizations
As described above, research staff identified and verified 756 service locations across the state. These sites were comprised of service locations for a total of 254 unique organizations in the state of Oregon currently providing one or more of the following services: substance use disorder prevention, treatment, and/or recovery services, with services delivered in one or more Oregon counties. Of those 254 unique organizations, 164 (65%) participated in the survey and rapid assessment process.

Each participating organization (N=164) completed one survey for each county in which they operated a service location. A total of 289 surveys were completed or partially completed by the 164 participating organizations, with up to one survey per organization, per county. Out of the 164 participating organizations, 139 completed surveys for multiple counties. Note that statewide counts include three additional organizations whose services were either statewide or virtual only. These organizations are included in statewide totals, but not county or region-specific totals.

Organizations self-reported up to four categories of service ("service types") across the continuum care, which was tabulated by county. Service types to choose from included substance use prevention, treatment, and/or recovery services, as well as behavioral health screenings (specifically the Patient Health Questionnaire (PHQ), Alcohol Use Disorder Identification Test (AUDIT), and General Anxiety Disorder (GAD)). Table 13 below summarizes the number of total surveys completed (n=289), by region and county, and the percent offering each service type. Most organizations reported that they provided more than one service type. For example, an organization could state they offer prevention and treatment services, and therefore were included in the count for both of these categories. Statewide, 138 of participating organizations (48%) provided behavioral health screening†; 143 offered prevention services (50%), 183 offered treatment 54%, and 142 offered recovery services (50%).

The survey also asked participants to self-report on services for Oregon Federally Recognized Tribes: “Which (if any) Oregon Tribes does your organization provide services to? Only select tribes if it is a tribally specific resources like Indian Health Service or a Tribally run organization.”

Table 14 summarizes which organizations self-reported providing specific services for Native American Tribes. Out of the 164 participating organizations, 32 reported providing services to one or more tribes across one or more counties (19.5%). An organization may provide services to more than one tribe, so the sum of the number of organizations by tribe will be greater than the total.

The American Society of Addiction Medicine (ASAM) outlines levels of care based on acuity and individual assets and challenges. The levels of care start with early intervention and then progressively increase in intensity and medical management through outpatient, intensive outpatient/partial hospitalization, residential/inpatient, and medically managed intensive inpatient. The ASAM levels of care highlight the need for a system that has the capacity and the ability to increase and decrease care intensity based on individual needs. Among participants reporting treatment services (N=183), 135 indicated services at specific levels of care summarized in Table 15. The majority (87%) offered intensive outpatient/partial hospitalization. About half offered early intervention (46%), outpatient (44%), and residential inpatient (51%). Fewer participating organizations offered residential detoxification services of any kind, with 16% providing medically managed intensive inpatient services.

Staffing and Finance
As shown in Table 16, over half of survey participants reported capacity did not meet current demand for services (54%). In addition to capacity challenges, the majority of organizations also reported that funding was in inadequate to support their mission (60%). These findings are bolstered by organizations’ self-reports about staffing levels and challenges filling vacant positions, with 66% of participants stating levels of staffing were inadequate to support their mission, and 80% of participants indicating difficulty filling vacant positions for staff.

Figure 4 shows data about capacity for services by region, which shows across all service types, 50 – 72.7% regions report that their capacity for services does not meet their demand for services. Region 4 (Coos, Curry, Douglas, Jackson, Josephine, Klamath) has the largest percent of organizations reporting inadequacies in their organization’s capacity to serve clients.
Counties within NSDUH Regions: Region 1: Multnomah; Region 2: Clackamas, Washington; Region 3: Benton, Clatsop, Columbia, Lane, Lincoln, Linn, Marion, Polk, Tillamook, Yamhill; Region 4: Coos, Curry, Douglas, Jackson, Josephine, Klamath; Region 5: Crook, Deschutes, Jefferson; Region 6: Baker, Gilliam, Grant, Harney, Hood River, Lake, Malheur, Morrow, Sherman, Umatilla, Union, Walla Walla, Wasco, Wheeler

As shown in Table 17, survey participants reported a range of funding streams used to support their organizations. The majority indicated private insurance and Medicaid/Medicare, followed by state/county funding, federal grants, private grants, and Indian Health Service. Note that responses do not indicate the proportion of organization operating budgets funded through each source.

Harm reduction encompasses the policies, programs, and strategies that seek to minimize the harmful consequences of drug use and drug policies; it is both a philosophy and service delivery model that addresses the needs of people who use drugs as well as the needs of their communities (Marlatt et al., 1996; Roe, 2005; Calvo et al., 2017). In contrast to abstinence-based models, harm reduction embraces low-threshold access to services and does not make efforts to stop using drugs a precondition for support (Zelvin & Davis, 2001). A total of 141 out of the 289 survey participants indicated that they offered harm reduction services (Table 21). Of those, the majority provided information on safer drug use, non-abstinence-based services, and “other” harm reduction services. About half offered overdose prevention and reversal services. Fewer than one in five participants offering harm reduction reported that they provided drug checking.

As shown in Table 22, a total of 85 out of the 183 participants offering substance use disorder treatment indicated that they prescribe or dispense one or more medications for opioid use disorder. About half of these dispensed medications only, but did not prescribe. Half dispensed at least one formulation of sublingual buprenorphine or buprenorphine/naloxone and 46% dispensed naltrexone. Approximately 30% of participating MOUD treatment providers (see Table 16) were certified Opioid Treatment Programs. Among those reporting any methadone services, 6 prescribed and dispensed, 9 prescribed only, and 9 dispensed only.

Equity and Access

Table 23 through Table 29 indicate provision of services to increase accessibility of prevention, treatment, and recovery among protected classes, as well as individuals with limited access to culturally relevant services, and those that experience barriers to services related to transportation, technology, and housing.

As shown in Table 23, the majority of survey participants reported provision of transportation support and linkages to primary care for their clients. More than half (64%) of participants offering recovery support services indicated specialty programming for adults re-entering community from incarceration. A minority of survey participants indicated that they offered formal services to support employment, legal service needs, or evidence-based family support services.

Table 24 shows the number of participants indicating programming to support protected classes. Nearly half (48%) of organizations offering recovery services indicated services specific to a racial or ethnic group, and 42% of organizations offering recovery services indicated gender-specific services. Among organizations offering prevention services, 48% did not
indicate specific programming for protected classes; 37% of organizations offering treatment and 26% of organizations offering recovery services also did not indicate offering specific programming for protected classes.

</table>

Regionally, we also see barriers in transportation which are more pronounced in rural regions. Figure 5 shows the percent of organizations by region who reported that travel time or access to transportation is a barrier for their clients. In Region 4 (Coos, Curry, Douglas, Jackson, Josephine, Klamath) 86.2% of organizations reported transportation as a barrier, and in Region 6 (Baker, Gilliam, Grant, Harney, Hood River, Lake, Malheur, Morrow, Sherman, Umatilla, Union, Wallowa, Wasco, Wheeler) 77.4% of organizations reported transportation as a barrier.

Figure 5. Organizations that reported transportation or travel time as a barrier to their clients

**Counties within NSDUH Regions:** Region 1: Multnomah; Region 2: Clackamas, Washington; Region 3: Benton, Clatsop, Columbia, Lane, Lincoln, Linn, Marion, Polk, Tillamook, Yamhill; Region 4: Coos, Curry, Douglas, Jackson, Josephine, Klamath; Region 5: Crook, Deschutes, Jefferson; Region 6: Baker, Gilliam, Grant, Harney, Hood River, Lake, Malheur, Morrow, Sherman, Umatilla, Union, Wallowa, Wasco, Wheeler
What Are the Limitations?

The needs assessment, substance use disorder services directory, CAST, and survey together create a robust overview of the substance use disorder landscape across Oregon. Collectively, they provide a point in time snapshot of substance use prevalence and care systems gaps statewide, regionally, and at the county level. Each strategy employed has its own strengths and limitations; on their own, they may not paint a full picture of what is truly happening within a county or region. The following limitations should be considered when reviewing and interpreting data collected through this rapid assessment:

- The CAST is a powerful tool to quantify regional gaps in services that account for differences in both geography and population demographics. The methodology generates a risk score that can be used to address specific components that impact risk of hospitalization associated with substance use. However, it requires that users adopt pre-defined service categories across prevention, harm reduction, treatment, and recovery. Rigid categorization of “prevention”, “harm reduction”, “treatment” or “recovery” can be limiting. We employed operational definitions for each of these services for purposes of implementing the CAST tool. In practice, the continuum of care is not linear, and individual service needs and service providers do not operate within the boundaries of prevention, treatment and recovery.

- The CAST does not account for the presence or absence of culturally responsive services. This may lead to underestimates in gaps, and particularly for Black, American-Indian Alaskan Native (AIAN), and Latinx individuals, who are less likely to experience culturally appropriate treatment compared to non-Latinx white Americans.44,45

- Treatment services were overrepresented in the inventory of services, compared to prevention and harm reduction. This is due to the fact that, historically, more resources have been put into place to catalog and maintain and record of substance use disorder treatment facilities. No such comprehensive list existed for prevention, harm reduction, or recovery services in Oregon. Moreover, the full scope and scale of prevention, harm reduction and recovery supports (including both service delivery and service gaps) can be difficult to quantify, particularly because funding streams and workforce credentialing systems are still developing to acknowledge and support the broad scope of this work.

- The categories outlined for services using the CAST are limited and do not adequately represent all services that truly provide substance use disorder services in Oregon

- While the substance use disorder services survey provides a rich source of contextual information, we achieved only a 65% response rates over the brief implementation cycle. Additional resources are required to carry out additional outreach to organizations who have not yet participated. Prevention and recovery organizations are most likely underrepresented in the CAST analysis and the survey findings. Small numbers may reduce the reliability of counties and regions within the state’s rural and frontier areas.
Statewide and County Profiles

The following section includes select findings by county, compiled to provide key information from the needs assessment, CAST analysis, and survey.

Needs assessment data shared in the county profiles include prevalence information for the county, including the estimated number of individuals ages 12 and up with a substance use disorder and the number of individuals with a substance use disorder who need but are not receiving treatment at a specialty facility.

The CAST findings in the county profiles include all the components that go into the risk score for that county, as well as the risk score and risk level, using a color-coded gradient of gold to red to denote level of risk.

Additional CAST findings included in county profiles show the service gaps by selected CAST categories described above. If a county was determined to not have a gap in services for a specific category, that category is not shown in the county profile. The county profiles also include an overall CAST percent gap across all service categories.

Survey findings included in county profiles are reported at a regional level. A regional summary of responses from local agencies who participated in the inventory survey are included for the following survey questions:

- In [the county where your organization operates], does capacity for services meet the demand for services?
- In [the county where your organization operates], do you offer services in languages other than English (with certified interpreters on staff, using contracted services like language line, or certified staff who are multi-lingual)?
- In [the county where your organization operates], is travel time or access to transportation a barrier for clients?
- In [the county where your organization operates], do you offer any services that are specific for people of a protected class? A protected class refers to groups of people who are legally protected from being harmed or harassed by laws, practices, and policies that discriminate against them due to a shared characteristic. This includes race/ethnicity, religion, gender, sexual orientation, disability, or veteran status. For this survey, we are categorizing services that are specifically for members who are part of one of these protected classes - for example, substance use disorder counseling that uses Indigenous customs, or support groups built for people who are LGBTQIA2S+. If a county was determined to not have a gap in services for a specific category, that category is not shown in the county profile. The county profiles also include an overall CAST percent gap across all service categories.
- In [the county where your organization operates], do you provide outreach services to individuals who are houseless?

$LGBTQIA2S+$ stands for lesbian, gay, bisexual, trans, queer and/or questioning, intersex, asexual, two-spirit, and the countless affirmative ways in which people choose to self-identify.
State of Oregon

CAST Estimate of Substance Use Disorder (SUD) Prevalence & Treatment Need
Based on self-reported data from the National Survey on Drug Use and Health and CAST estimates, among those ages 12 and over

SUD Prevalence Statewide: 669,753 individuals estimated with an SUD in the past year

Unmet SUD Treatment Need Statewide: 664,607 individuals estimated needing but not receiving treatment in a specialty facility for SUD in the past year

Statewide, the Calculating for an Adequate System Tool (CAST) risk of hospitalization for alcohol or drug diagnosis score in Oregon State is 22, which is considered a HIGH level of risk and corresponds to a 69-92% likelihood of having a hospitalization rate above the national median hospitalization rate for drug or alcohol diagnosis. The CAST risk score accounts for social characteristics that are related to risk, as well as social disparities that may relate to lower access or utilization of services.

The community characteristics that are included in the CAST assessment are shown in the table below.

Statewide Community Characteristics Contributing to CAST Risk Score

</table>
Across the state, organizations who participated in the inventory survey reported:

- 54.1% do not think their capacity meets the current demand for services;
- 24.6% do not offer services in languages other than English;
- 64% noted travel time or transportation as a barriers to accessing services;
- 40.4% do not offer any services that are specific for people of a protected class (e.g., race/ethnicity, disabilty, sexual orientation); and
- 37% do not provide outreach services to individuals who are houseless.

A review of the current SUD resources and service capacity across the state of Oregon provides an overview of service gaps* for select types of prevention, harm reduction, treatment, and recovery services. Statewide County has an overall service gap of 49%. This means out of the total number of recommended services in Statewide County, it is estimated that 49% are missing. The top identified service gaps are shown below.

**Statewide Service Gaps Identified by the CAST**

* The CAST Tool provides a recommended number of services for each of the listed categories. The existing number of services were subtracted from the CAST recommended number of services to calculate the gap in number of services. **Percent gap** is calculated by dividing the gap in number of services by the recommended number of services.
CAST Estimate of Substance Use Disorder (SUD) Prevalence & Treatment Need
Based on self-reported data from the National Survey on Drug Use and Health and CAST estimates, among those ages 12 and over

SUD Prevalence in Baker County:
2,638 individuals estimated with an SUD in the past year

Unmet SUD Treatment Need in Baker County:
2,618 individuals estimated needing but not receiving treatment in a specialty facility for SUD in the past year

Baker County’s Calculating for an Adequate System Tool (CAST) risk of hospitalization for alcohol or drug diagnosis score is 18, which is considered a MODERATE level of risk and corresponds to a 35-67% likelihood of having a hospitalization rate above the national median hospitalization rate for drug or alcohol diagnosis. The CAST risk score accounts for social characteristics that are related to risk, as well as social disparities that may relate to lower access or utilization of services.

The community characteristics that are included in the CAST assessment are shown in the table below.

**CAST Estimate of Substance Use Disorder (SUD) Prevalence & Treatment Need**

Based on self-reported data from the National Survey on Drug Use and Health and CAST estimates, among those ages 12 and over

**SUD Prevalence in Clackamas County:**
66,471 individuals estimated with an SUD in the past year

**Unmet SUD Treatment Need in Clackamas County:**
65,960 individuals estimated needing but not receiving treatment in a specialty facility for SUD in the past year
In Region 2, organizations who participated in the inventory survey reported:

- 51.2% do not think their capacity meets the current demand for services;
- 30% do not offer services in languages other than English;
- 53.1% noted travel time or transportation as a barriers to accessing services;
- 39.1% do not offer any services that are specific for people of a protected class (e.g., race/ethnicity, disability, sexual orientation); and
- 39.6% do not provide outreach services to individuals who are houseless.

A review of Clackamas County’s current SUD resources and service capacity provides an overview of service gaps* for select types of prevention, harm reduction, treatment, and recovery services. Clackamas County has an overall service gap of 68%. This means out of the total number of recommended services in Clackamas County, it is estimated that 68% are missing. The top identified service gaps are shown below.

Clackamas County Service Gaps Identified by the CAST

* The CAST Tool provides a recommended number of services for each of the listed categories. The existing number of services were subtracted from the CAST recommended number of services to calculate the gap in number of services. Percent gap is calculated by dividing the gap in number of services by the recommended number of services.
Clatsop County

CAST Estimate of Substance Use Disorder (SUD) Prevalence & Treatment Need
Based on self-reported data from the National Survey on Drug Use and Health and CAST estimates, among those ages 12 and over

SUD Prevalence in Clatsop County:
6,574 individuals estimated with an SUD in the past year

Unmet SUD Treatment Need in Clatsop County:
6,523 individuals estimated needing but not receiving treatment in a specialty facility for SUD in the past year

Clatsop County’s Calculating for an Adequate System Tool (CAST) risk of hospitalization for alcohol or drug diagnosis score is 17, which is considered a MODERATE level of risk and corresponds to a 35-67% likelihood of having a hospitalization rate above the national median hospitalization rate for drug or alcohol diagnosis. The CAST risk score accounts for social characteristics that are related to risk, as well as social disparities that may relate to lower access or utilization of services.

The community characteristics that are included in the CAST assessment are shown in the table below.

In Region 3, organizations who participated in the inventory survey reported:

- 50% do not think their capacity meets the current demand for services;
- 23.9% do not offer services in languages other than English;
- 64.7% noted travel time or transportation as a barriers to accessing services;
- 25.8% do not offer any services that are specific for people of a protected class (e.g., race/ethnicity, disability, sexual orientation); and
- 40.3% do not provide outreach services to individuals who are houseless.

A review of Clatsop County’s current SUD resources and service capacity provides an overview of service gaps* for select types of prevention, harm reduction, treatment, and recovery services. Clatsop County has an overall service gap of 33%. This means out of the total number of recommended services in Clatsop County, it is estimated that 33% are missing. The top identified service gaps are shown below.

* The CAST Tool provides a recommended number of services for each of the listed categories. The existing number of services were subtracted from the CAST recommended number of services to calculate the gap in number of services. **Percent gap** is calculated by dividing the gap in number of services by the recommended number of services.

**Region 3** is comprised of Benton, Clatsop, Columbia, Lane, Lincoln, Linn, Marion, Polk, Tillamook, and Yamhill Counties.
Columbia County

CAST Estimate of Substance Use Disorder (SUD) Prevalence & Treatment Need
Based on self-reported data from the National Survey on Drug Use and Health and CAST estimates, among those ages 12 and over

SUD Prevalence in Columbia County:
8,325 individuals estimated with an SUD in the past year

Unmet SUD Treatment Need in Columbia County:
8,261 individuals estimated needing but not receiving treatment in a specialty facility for SUD in the past year

Columbia County's Calculating for an Adequate System Tool (CAST) risk of hospitalization for alcohol or drug diagnosis score is 18, which is considered a MODERATE level of risk and corresponds to a 35-67% likelihood of having a hospitalization rate above the national median hospitalization rate for drug or alcohol diagnosis. The CAST risk score accounts for social characteristics that are related to risk, as well as social disparities that may relate to lower access or utilization of services.

The community characteristics that are included in the CAST assessment are shown in the table below.

In Region 3, organizations who participated in the inventory survey reported:

- 50% do not think their capacity meets the current demand for services;
- 23.9% do not offer services in languages other than English;
- 64.7% noted travel time or transportation as a barrier to accessing services;
- 25.8% do not offer any services that are specific for people of a protected class (e.g., race/ethnicity, disability, sexual orientation); and
- 40.3% do not provide outreach services to individuals who are houseless.

A review of Polk County’s current SUD resources and service capacity provides an overview of service gaps* for select types of prevention, harm reduction, treatment, and recovery services. Polk County has an overall service gap of 76%. This means out of the total number of recommended services in Polk County, it is estimated that 76% are missing. The top identified service gaps are shown below.

**Unmet SUD Treatment Need in Washington County:**
92,917 individuals estimated needing but not receiving treatment in a specialty facility for SUD in the past year

**Washington County’s Calculating for an Adequate System Tool (CAST) risk of hospitalization for alcohol or drug diagnosis score is 15, which is considered a MODERATE level of risk** and corresponds to a 35-67% likelihood of having a hospitalization rate above the national median hospitalization rate for drug or alcohol diagnosis. The CAST risk score accounts for social characteristics that are related to risk, as well as social disparities that may relate to lower access or utilization of services.

The community characteristics that are included in the CAST assessment are shown in the table below.

* The CAST Tool provides a recommended number of services for each of the listed categories. The existing number of services were subtracted from the CAST recommended number of services to calculate the gap in number of services. Percent gap is calculated by dividing the gap in number of services by the recommended number of services.

Region 6 is comprised of Baker, Gilliam, Grant, Harney, Hood River, Lake, Malheur, Morrow, Sherman, Umatilla, Union, Wallowa, Wasco, and Wheeler Counties.
CAST Estimate of Substance Use Disorder (SUD) Prevalence & Treatment Need
Based on self-reported data from the National Survey on Drug Use and Health and CAST estimates, among those ages 12 and over

SUD Prevalence in Yamhill County:
16,909 individuals estimated with an SUD in the past year

Unmet SUD Treatment Need in Yamhill County:
16,779 individuals estimated needing but not receiving treatment in a specialty facility for SUD in the past year

Yamhill County’s Calculating for an Adequate System Tool (CAST) risk of hospitalization for alcohol or drug diagnosis score is 21, which is considered a HIGH level of risk and corresponds to a 69-92% likelihood of having a hospitalization rate above the national median hospitalization rate for drug or alcohol diagnosis. The CAST risk score accounts for social characteristics that are related to risk, as well as social disparities that may relate to lower access or utilization of services.

The community characteristics that are included in the CAST assessment are shown in the table below.

* Region 3 is comprised of Benton, Clatsop, Columbia, Lane, Lincoln, Linn, Marion, Polk, Tillamook, and Yamhill Counties.

* The CAST Tool provides a recommended number of services for each of the listed categories. The existing number of services were subtracted from the CAST recommended number of services to calculate the gap in number of services. **Percent gap** is calculated by dividing the gap in number of services by the recommended number of services.
Summary of Findings

The Oregon Substance Use Disorder Services Inventory and Gap Analysis conducted from September 2021 through September 2022 revealed high rates of unmet treatment need and statewide gaps in critical substance use disorder prevention, harm reduction, treatment and recovery services.

Survey data revealed deficits in capacity of existing services to meet the needs of their clients. Even with the expansion of telemedicine and other virtual service delivery and supports since March of 2020, providers reported access to transportation and technology as persistent barriers to substance use disorder services across the continuum of care. Survey data further suggest statewide race and ethnic disparities in both workforce and access to culturally relevant services.

Needs Assessment

- Data from the National Survey on Drug Use and Health show that nearly 1 in 3 Oregonians ages 18 to 25, and 1 in 5 Oregonians ages 26 and up engaged in binge drinking in the last month.\textsuperscript{16} Fifteen percent of adults ages 18 to 25 and 13\% of adults 26 and older have an alcohol use disorder.\textsuperscript{16} Twenty percent of Oregonians ages 18 to 25 have an “illicit drug use disorder”.\textsuperscript{16}

- Oregon’s rates of marijuana use and methamphetamine use are above the national average.\textsuperscript{16} Moreover, unmet need for any substance use disorder treatment in a specialty facility is higher in Oregon than for the nation overall.\textsuperscript{16}

- Among Oregon Health Plan members, who represent about 30\% of the state’s population ages 12 to 64, rates of substance use disorder diagnoses (6\% of adults ages 18 to 25 and 11\% of adults ages 26 to 64) suggest that less than half of those with a use disorder have been diagnosed.

- Oregon’s healthcare workforce does not represent demographics of the state. In particular, Hispanic/Latinx, Black/African American, and Native American people in Oregon are underrepresented among prescribing physicians. Additional disparities exist among the non-prescribing workforce, with Hispanic/Latinx underrepresented among Oregon’s Qualified Mental Health Associates, Qualified Mental Health Professionals, Certified Alcohol and Drug Counselors, and Certified Peer Specialists. These disparities exacerbate and sustain gaps in linguistically appropriate and culturally relevant care

\textsuperscript{**} Please note that the current project was developed prior to passage of the Drug Addiction Treatment and Recovery Act (Measure 110), and data collection and analysis were underway during the selection of behavioral health resource network (BHRN) grantees in all 36 counties.
Calculating for an Adequate System Tool

- Rapid assessment of substance use disorder services using the Calculating for an Adequate System Tool (CAST) demonstrated large gaps in number of recommended services statewide and by county across the continuum of care. All 36 counties in Oregon demonstrate moderate to high risk for a hospitalization rate above the national median for substance use disorder-related illness or injury.

- All 36 Oregon counties showed violent crime, high alcohol outlet density, and low social association rates as Oregon’s most substantial contributors to risk of hospitalization for a substance use disorder compared to the nation as a whole.

- Statewide, the CAST estimates a 49% gap in services needed to address substance misuse and substance use disorder across the continuum of care in Oregon.

- Workforce gaps identified through the CAST included Certified Prevention Specialists (94%), Qualified Mental Health Professionals (93%) and Associates (86%), and prescribers with waivers to prescribe buprenorphine (51%).

- Substantial gaps in statewide treatment and recovery facilities identified by the CAST included: Recovery Community Centers (94%), Inpatient Treatment Facilities (60%), and Recovery Residences (55%). The CAST estimated a 58% gap in syringe service programs.

Substance Use Disorder Services Survey

- Survey findings suggest that more than half of service organizations lack capacity to meet current demand for services and have inadequate funding and staffing levels to support their organizational mission. Almost 69% of survey participants reported that transportation remains a barrier for their clients in accessing services.

- Less than half of surveyed organizations reported provision of services specific to a racial or ethnic group (culturally relevant services) or gender specific services. Less than one third of organizations offered specific services to LGBTQIA2S+ clients, clients with mental or physical disabilities, or veterans.

- Only 33.3% of surveyed organizations indicated they provide any kind of culturally specific prevention services, 38.5% provide culturally specific treatment services, and 48.5% provide culturally specific recovery services. Interpretation and translation services are rarely available in languages other than Spanish.

- The majority of surveyed organizations across the continuum of care indicated that they employ peer support specialists. Recovery Peers were most frequently employed. Among organizations providing prevention services, nearly half also employed Mental Health Peers, Family Support Specialists and Youth Support Specialists.
• Among the survey respondents that reported their organization provides prevention services, only 38% indicated that their capacity meets the current demand for prevention services in their communities. These respondents also reported several workforce concerns that affect their organization’s ability to meet community needs. Only 33% indicated they have adequate staffing to meet their organizational mission, and 77% of prevention participants reported that they have difficulty filling vacant positions.

• A total of 141 out of the 289 survey participants indicated that they offered harm reduction services. Fewer than one in five participants offering harm reduction reported that they provided drug checking (fentanyl test strips) or syringe services.

• Among surveyed organizations offering treatment at specific levels of care (n=135), only 16% offered medically managed intensive inpatient, and 22% offered residential detox. The majority (87%) offered intensive outpatient/partial hospitalization services.

• A total of 85 out of the 183 participants offering substance use disorder treatment indicated that they prescribe or dispense one or more medications for opioid use disorder. Half dispensed at least one formulation of sublingual buprenorphine or buprenorphine/naloxone, and 46% dispensed naltrexone. Approximately 30% of participating MOUD treatment providers were certified Opioid Treatment Programs. Among those reporting any methadone services, 6 prescribed and dispensed, 9 prescribed only, and 9 dispensed only.
Recommendations

The Substance Use Disorder Service Inventory and Gap Analysis revealed alarming service delivery system gaps across categories of prevention, treatment, and recovery throughout the state. Moreover, existing services described critical gaps in capacity to deliver services to meet demand – including funding and identifying staff to fill vacant positions. Allocating resources to address substance misuse and substance use disorder in Oregon will require investment in evidence-based and culturally relevant prevention, treatment, harm reduction, and recovery services that meet the needs of local communities. Given the inequitable consequences of the War on Drugs and the misdistribution of resources for substance use disorder, work in this space must adopt an equity lens and work towards repairing the harm of failed drug policies and the underinvestment of resources in marginalized communities.

The following recommendations to expand and improve Oregon’s capacity to meet the urgent need for substance use disorder prevention, harm reduction, treatment and recovery emerged from the inventory and gap analysis project.6

1. Recognizing substantial gaps in the present substance use disorder systems of care and limited options for medically managed treatment, foster a “no wrong door” approach to treatment by allowing increased flexibility in payment structures, care settings, and credentialing.

2. Given the increasing rates of overdose from opioids and stimulants, treat encounters in the emergency department, hospital, shelters, and justice systems as opportunities for connection to community treatment and naloxone distribution.

3. Increase access to substance use disorder services through expanded transportation and technology.

4. Incentivize and monitor equitable distribution of linguistically and culturally relevant services, and services designed to meet the needs of protected classes.

5. Expand LGBTQIA2S+ specific services, particularly recovery services for youth who are at high risk for substance misuse and substance use disorder as compared to their cisgender, heterosexual peers and may benefit from targeted services.46

6. Address gaps in the substance use disorder workforce, including both prescribers and credentialed staff providing essential prevention services and recovery supports.

---

6 Please note that this work was developed prior to passage of the Drug Addiction Treatment and Recovery Act (Measure 110), and data collection and analysis were underway during the selection of behavioral health resource network grantees in all 36 counties.
7. Significant investments in prevention are needed to support youth and families. Additional work focused on the prevention services landscape in Oregon is needed to better understand the broad scope of prevention services offered across the lifespan, how they are implemented across Oregon, and how to improve both quality and number of prevention services available to Oregonians.

8. Address known risk factors for hospitalization due to a drug or alcohol diagnosis (e.g., lowering alcohol outlet density and increasing opportunities for positive social connection).

9. Expand publicly funded recovery support services in a variety of settings, delivered by credentialed professionals including health care providers, counselors, and peers.

10. Expand access to all medications for opioid use disorder, including sublingual/oral and injectable formulations of buprenorphine, naltrexone, and methadone. Telemedicine and mobile medication units can increase access to patients in rural areas and patients who are houseless or unstably housed.

11. Invest in syringe service and other harm reduction programs, including drug checking.

12. Prioritize strategies that target affordable housing, education, and employment to reduce risk of substance use disorders and their consequences and to support long term recovery.

Appendix B: Substance Use Disorder Service Directory

An inventory of known services available across Oregon was compiled prior to conducting outreach to collect details about organization-level services in all Oregon counties. An initial list was compiled with support from the Oregon Council for Behavioral Health and Lines for Life, both with recently maintained lists of accredited substance use disorder organizations across the state. This list was cross referenced with Oregon Health Authority’s monthly release of the Oregon Substance Use Disorders Services Directory. Additionally, OHSU-PSU SPH staff presented at various stakeholder meetings about this project, sharing the service list directly with others to help identify organizations that may have been missing from the initial list.

Please note that this directory was developed for the Oregon Substance Use Disorder Inventory and Gap Analysis, completed in September, 2022. It includes organizations contacted and invited to participate in the substance use disorder services survey between March and June of 2022. Please consult organizations’ web sites for current contact information and specific services offered.

Baker

New Directions NorthWest
Services Provided: Prevention, Treatment

Appendix C.1: Substance Use Disorder Services Survey, Treatment and Recovery Specific

Intro Statement

In collaboration with the Oregon Alcohol and Drug Policy Commission and Oregon Health Authority, Dr. Elizabeth Waddell and the OHSU-PSU School of Public Health are working on an initiative to inventory the available substance use disorder (SUD) prevention, treatment, and recovery services across Oregon (OR).

This survey is intended to collect information about your organization’s SUD services to inform a statewide gap analysis. The inventory and gap analysis process will be used to better understand and identify where to target resources. This survey will take approximately 20-30 minutes to complete. You will be able to exit the survey and re-enter to complete it at a later time, so long as it is within one week of starting the survey.

If you (or another representative at your organization who can speak to the types of services, capacity and reach, and staff and leadership demographics) would prefer to walk through this survey over the phone with a staff member filling out responses on your behalf, please email the project director.

Full Survey Questions

Organization’s Name

________________________________________________________

Your Name and Contact Information

- Name ________________________________
- Role ________________________________
- Email ________________________________
- Phone ________________________________

Please select the counties where your organization provides services, and/or where your organization is physically located.

- □ Baker County
- □ Benton County
- □ Clackamas County
- □ Clatsop County
- □ Columbia County
- □ Coos County
- □ Crook County
- □ Curry County
- □ Deschutes County
Which (if any) Oregon Tribes does your organization provide services to?
(Only select tribes if it is a tribally specific resources like Indian Health Service or a Tribally run organization.)
- Burns Paiute Tribe
- Confederated Tribes of Coos, Lower Umpqua and Siuslaw Indians
- Confederated Tribes of Grand Ronde
- Confederated Tribes of Siletz
- Confederated Tribes of the Umatilla

### Does your organization have Peer Support Specialists?

- [ ] Yes
- [ ] No
- [ ] Unsure

**Display This Question: If Does your organization have Peer Support Specialists? = yes**

### Which type of certified Peer Support Specialists (PSS) does your organization have? (Select all that apply)

- [ ] Recovery Peer: A person in addiction recovery with two years abstinence who provides support services to people seeking recovery from addiction.
- [ ] Mental Health Peer: A person with lived experience of mental health challenges who provides support services to other people with similar experiences.
- [ ] Family Support Specialist: A person with experience parenting a child or youth with substance use or mental health challenges who supports other parents with children or youth with substance use or mental health challenges.
- [ ] Youth Support Specialist: A person with lived experience with substance use or mental health treatment who also had difficulty accessing education, health or wellness services who wants to provide support services strictly with people under the age of 30.
- [ ] Other Peer or traditional health worker/liaisons.
- [ ] n/a

**Display This Question: If Does your organization have Peer Support Specialists? = yes**

### Are the Peer Support Specialist positions paid or volunteer?

- [ ] All paid
- [ ] Some paid
- [ ] All volunteer
- [ ] Unsure
Does your organization provide any of the following resources? (Select all that apply)

- Client transportation services (provided or voucher)
- Job or trade specific training
- Job placements
- Linkages to primary care
- Housing services (not referral)
- Legal services
- Reentry services for people coming out of jail or prison
- Evidence based family support services (e.g., CRAFT, Johnson Institute Intervention, or Al-Anon)

Do you provide any targeted services to justice involved adults?

- Yes
- No
- Unsure

Optional: Any additional information about types of services offered

The following questions inquire about accessibility, inclusion, and accommodations for services.

Do you offer services in languages other than English? (Select all that apply)

- Yes, with certified interpreters on staff
- Yes, with a contracted service program like Language Line
- Yes, with Certified Staff who are multi-lingual
- No, services are only offered in English

Display This Question: If The following questions inquire about accessibility, inclusion, and accommodations for services.... = Yes, with certified interpreters on staff, Or The following questions inquire about accessibility, inclusion, and accommodations for services.... = Yes, with Certified Staff who are multi-lingual

What other languages do you provide services through interpreters or multi-lingual staff? (Select all that apply)

- Spanish
- Russian
- Chinese (including Mandarin and Cantonese)
- Vietnamese
- American Sign Language
- Other
Do you have printed or web-based information available in languages other than English?

- Yes
- No
- Unsure

Display This Question: If Do you have printed or web-based information available in languages other than English? = Yes

What other languages or formats are printed or web-based information available in? (Select all that apply)

- ☐ Spanish
- ☐ Russian
- ☐ Chinese (including Mandarin and Cantonese)
- ☐ Vietnamese
- ☐ Accessible formats (e.g., large print, Braille)
- ☐ Other

Do you offer any services that are specific for people of a protected class? Please select all that apply, and only select if the services are specifically for the identified group (e.g., SUD counseling that uses Indigenous customs, or support groups only for Veterans).

“Protected class” refers to groups of people who are legally protected from being harmed or harassed by laws, practices, and policies that discriminate against them due to a shared characteristic. This includes race/ethnicity, religion, gender, sexual orientation, disability, or veteran status.

- ☐ None
- ☐ Services specific to a Racial or ethnic group (culturally specific services)
- ☐ Services specific to a certain religious group
- ☐ Gender specific services
- ☐ LGBTQ+2S specific services
- ☐ Services specific for people with a mental or physical disability
- ☐ Services for Veterans
- ☐ Other

Do you have services or protocols in place for clients who are undocumented?

- Yes
- No
- Unsure
Is travel time or access to transportation a barrier for clients?
- Yes
- No
- Unsure

Do you offer any of the following virtual programming or teleservices?
- Billable counseling teleservices
- Billable treatment services
- Non-billable virtual services, like Recovery meetings, trainings, classes, or peer mentor services
- No virtual or teleservices
- Other ____________________________

Display This Question: If Do you offer any of the following virtual programming or teleservices? = Billable counseling teleservices, Or Do you offer any of the following virtual programming or teleservices? = Billable treatment services, Or Do you offer any of the following virtual programming or teleservices? = Non-billable virtual services, like Recovery meetings, trainings, classes, or peer mentor services

Is access to technology a barrier for clients utilizing Teleservices?
- Yes
- No

How does your organization approach Trauma Informed Care?
Trauma-informed care recognizes and responds to the signs, symptoms, and risks of trauma to better support the health needs of patients who have experienced Adverse Childhood Experiences (ACEs) and toxic stress.
- We have formal training and implementation of trauma informed care at our organization
- Trauma informed care is implemented informally within in our organization
- Trauma informed care is not part of our care model
- Other ____________________________

Do you provide outreach services to individuals who are houseless?
- Yes
- No
- Unsure

Optional: Any additional comments you have about how clients access services or barriers they might face accessing services
________________________________________________________________
Next are questions about capacity for services, which we will be asking by county groupings. It is ok if some of these numbers approximate.

**How many people can your organization provide services to in [COUNTY]?**

*Display This Choice:*

- **If What level(s) of treatment care are provided? (Please select the level that best represents the c... = 0.5 Early Intervention**

- Recovery services how many people enrolled in peer or group support services?

In [COUNTY], does your capacity for services currently meet your demand for services?

- Yes
- No
- Unsure
Optional: Any additional notes about service capacity in [COUNTY]

We will continue with questions about how services are accessed by clients and any other types of programming or supports that are available on site.

In [COUNTY], do you offer services in languages other than English? (Select all that apply)

- Yes, with certified interpreters on staff
- Yes, with a contracted service program like Language Line
- Yes, with Certified staff who are multi-lingual
- No, services are only offered in English

Display This Question: If Loop current: In ${lm://Field/1}, do you offer services in languages other than English? (Select all that apply) = Yes, with certified interpreters on staff
Or Loop current: In ${lm://Field/1}, do you offer services in languages other than English? (Select all that apply) = Yes, with Certified staff who are multi-lingual

What other languages do you provide services through interpreters or multi-lingual staff? (Select all that apply)

- Spanish
- Russian
- Chinese (including Mandarin and Cantonese)
- Vietnamese
- American Sign Language
- Other
Do you have printed or web-based information available in languages other than English?

- Yes
- No
- Unsure

Display This Question: If Loop current: Do you have printed or web-based information available in languages other than English? = Yes

What other languages or formats are printed or web-based information available in? (Select all that apply)

- [ ] Spanish
- [ ] Russian
- [ ] Chinese (including Mandarin and Cantonese)
- [ ] Vietnamese
- [ ] Accessible formats (e.g., large print, Braille)
- [ ] Other

In [COUNTY], do you offer any services that are specific for people of a protected class? Please select all that apply, and only select if the services are specifically for the identified group (e.g., SUD counseling that uses Indigenous customs, or support groups only for Veterans).

- [ ] None
- [ ] Services specific to a Racial or ethnic group (cultural services)
- [ ] Services specific to a certain religious group
- [ ] Gender specific services
- [ ] LGBTQ+2S specific services
- [ ] Services specific for people with a mental or physical disability
- [ ] Services for Veterans
- [ ] Other

In [COUNTY] do you have services or protocols in place for clients who are undocumented?

- Yes
- No
- Unsure
If other, or more specific info about Racial/ethnic, religious, or gender groups provided, please describe for [COUNTY]

In [COUNTY], is travel time or access to transportation a barrier for clients?
- Yes
- No
- Unsure

In [COUNTY], do you offer any of the following virtual programming or teleservices?
- Billable treatment teleservices
- Billable counseling teleservices
- Non-billable virtual services like Recovery meetings, trainings, classes, or peer mentor services
- No teleservices

In [COUNTY], is access to technology a barrier for clients utilizing Teleservices?
- Yes
- No

In [COUNTY], how does your organization approach Trauma Informed Care?
Trauma-informed care recognizes and responds to the signs, symptoms, and risks of trauma to better support the health needs of patients who have experienced Adverse Childhood Experiences (ACEs) and toxic stress.
- Yes, formal training/implementation of trauma informed care
- Yes, informally
- No
- Unsure

In [COUNTY], do you provide outreach services to individuals who are houseless?
- Yes
- No
- Unsure
Optional: Any additional notes about access or barriers to services in [COUNTY]

The next few questions briefly address your organization’s financial resources across all locations.

From the list of funding sources below, please select the sources where you receive significant funding (select all that apply):

- Medicaid/Medicare
- Private Insurance
- Indian Health services
- Funding from state or county
- Federal Grants
- Foundation or Private Grants
- Other sources of funding

Is your funding adequate to carry out your organization’s mission?
- Yes
- No
- Unsure

Has your organization experienced a reduction in billable visits due to COVID-19 and the pandemic?
- Yes
- No
- Unsure

Has your organization experienced any changes in funding due to Measure-110?
- Yes, increase in funding
- Yes, decrease in funding
- No
- Unsure

Is your organization currently part of or applying to be a part of a Behavioral Health Resource Network (BHRN)?
- Currently part of a BHRN
- Applied to be part of a BHRN
- No

Optional: Any additional information or comments about funding
Before asking quantitative questions about number of staff and staff demographics, we will start with some general questions to help us understand any staffing needs.

**Is your current level of staffing adequate to support your organization's mission?**
- Yes
- No
- Unsure

**Do you have difficulty filling vacant positions?**
- Yes
- No
- Unsure

The following questions inquire about the number of people in different leadership and staff positions at your organization.

**How many people are on your leadership team (for example, executive director or CEO)?**

Optional: Any additional notes about leadership team numbers

The following questions are about your SUD Care staff, which will be asked for the specific county where services are provided
Q7.2 In [COUNTY], how many paid full-time positions in each category

Qualified Mental Health Professionals include: Clinical Social Workers, Licensed Professional Counselors, Marriage and Family therapist, Psychologist

Prescribing clinicians include: Psychiatrists and any other Medical Doctor, Physician Assistant (PA), Nurse Practitioner (NP), Osteopath (DO)

Count people in the highest qualification for example, if a QMHP is also a Certified Alcohol and Drug Counselor, only count them as QMHP.

- Qualified Mental Health Professionals (QMHP)____
- Qualified Mental Health Associate (QMHA) ______
- Certified Alcohol and Drug Counselors____
- Certified Peer Mentors____
- Case Managers____
- Number of Prescribing Clinicians who prescribe any medications for SUD____
- Prescribing Clinicians with an X-waiver (MD/NP/DO/PA) ___
- How many other certified traditional health workers not already counted here___

If other type of certified traditional health workers, please describe here:

____________________________________________________________________

In [COUNTY], does your organization have any volunteer positions?

- Yes
- No

Display This Question:
If Loop all: In $lm://Field/1, does your organization have any volunteer positions? = yes
How many volunteer positions? _______

Optional: Any additional notes or comments about the number of care staff

____________________________________________________________________

The following questions inquire about demographics of your organization's leadership team.
Within each gender category, please share the number of people on the Leadership Team who are:

- Cisgender men __________________________________________________________________________
- Cisgender women _________________________________________________________________________
- Transgender men ________________________________________________________________________
- Transgender women ______________________________________________________________________
- Nonbinary ______________________________________________________________________________
- Gender fluid ______________________________________________________________________________

Is there a category you use to track employees’ gender that we did not include here?
_________________________________________________________________________________________

Optional: Additional comments about gender of leadership team
_________________________________________________________________________________________

The next set of questions are about the race and ethnicity of your organization's leadership. Please answer as best as you can with the number of people in each category

Within each race/ethnicity category, please share the number of people on the Leadership Team who are:

- Black/African American ___
- Hispanic/Latino ___
- American Indian/Alaska Native ___
- Asian ___
- Native Hawaiian/Pacific Islander ___
- White ___
- Two or more races ___
- Unknown ___

Optional: Additional Comments about Race/ethnicity of Leadership Team
_________________________________________________________________________________________

Those are all of our questions for you today. Please press submit at the bottom of the page to finalize your survey

If you need to go back to edit questions, please press the back button.

If you have any issues with the survey or need additional help, please reach out by contacting Katie Lenahan, Project Director, at Lenahank@ohsu.edu.
Appendix C.2: Substance Use Disorder Services Survey, Prevention Specific

Intro Statement

In collaboration with the Oregon Alcohol and Drug Policy Commission and Oregon Health Authority, Dr. Elizabeth Waddell and the OHSU-PSU School of Public Health are working on an initiative to inventory the available substance use disorder (SUD) prevention, treatment, and recovery services across Oregon (OR).

This survey is intended to collect information about your organization's SUD Prevention services to inform a statewide gap analysis. The inventory and gap analysis process will be used to better understand and identify where to target resources. This survey will take approximately 20-30 minutes to complete. You will be able to exit the survey and re-enter to complete it at a later time, so long as it is within one week of starting the survey.

If you (or another representative at your organization who can speak to the types of services, capacity and reach, and staff and leadership demographics) would prefer to walk through this survey over the phone with a staff member filling out responses on your behalf, please email the project director.

Full Survey Questions

Organization's Name

Does your organization provide prevention services to youth or adults? Please check all that apply.

- Youth
- Adults

Display This Question:
If Does your organization provide prevention services to youth or adults? Please check all that apply. = youth
For youth-based prevention services, which of the following prevention programs do you offer at your organization?

- **Advocacy Event**: Media campaign with a specific, community change agenda related to behavioral health or management of substance use. Garnering local news attention to move forward the cause is a key consideration.

- **Community Prevention for Youth**: Substance use prevention programs being implemented within community settings.

- **Educational Support Programs for Youth**: Education programs aimed at helping recovering youth to achieve educational goals.

- **Electronic Media-based Intervention for Youth**: Electronic media-based interventions that focus on promoting health and safety behavior change in youth (18 or younger).

- **Intensive Family Services for Youth**: Intensive family services offer intensive, home-based crisis intervention, individual and family counseling, case management activities, and life-skills education for families with children under the age of 18 identified as being at-risk of placement outside of their home.

- **Mentorship Program for Youth**: Mentorship programs improve the well-being of the child by providing a role model that can support the child academically, socially and/or personally.

- **Peer Supports for Youth**: Peer supports work by providing someone who has the lived experience of behavioral health issues or substance abuse and can provide direct support through skill building and information sharing.

- **School-based prevention**: School-based prevention that focus on promoting health and safety behavior change in youth (18 or younger)

- **Other __________________________________________________**

*Display This Question:*

*If Does your organization provide prevention services to youth or adults? Please check all that apply.
= adults*
other major media outlets that intend to reach a large population of people and are not dependent on person-to-person contact. Cessation and use reduction campaigns are intended to get active users of substances to decrease or cease their consumption.

☐ **Mass Media Campaigns Stigma and treatment access reduction for adults**: Media campaigns that disseminate messages through television, radio, print media, billboards, and other major media outlets that intend to reach a large population of people and are not dependent on person-to-person contact. Stigma and treatment access campaigns are intended to decrease the stigma associated with behavioral health treatment programs, in an effort to increase enrollment in treatment programs.

☐ **Mental Health crisis intervention**: Mental health crisis intervention programs offer immediate, short-term mental health aid to individuals who are experiencing a mental health crisis event.

☐ Other ____________________________________________________________
