

Oregon ranks 14th on the prosperity of its residents compared to the 50 states and the District of Columbia. This rank is based on states' performance on economic measures for all residents but also accounts for racial disparities. Relative to other states, Oregon's performance is about average for residents overall, and the gap between White residents and residents of color is narrower. However, the disparities by race are still significant and have negative implications for the people and prosperity of Oregon. For example, the homeownership rate of White households is 66% compared to 35% for Black households and 42% for Latino households.

The Prosperity Now Scorecard features 29 policies that attempt to improve financial security outcomes. The Scorecard assesses whether your state has or has not adopted each of these policies. Oregon has adopted 17 policies.

## **OUTCOME MEASURES**

The *Scorecard* ranks states on 46 outcome measures from best to worst: #1 is the most desirable, #51 is the least desirable. The Outcome Rank is calculated by averaging the rank all of the state's measures and demonstrates how outcomes for all residents compare to residents of other states and DC. The Outcome Rank accounts for 60% of a state's Scorecard Rank.

## **OUTCOMES BY RACE & ETHNICITY**

Racial economic inequality limits a household's ability to prosper, and it's important to explore the impact that race and ethnicity have on outcomes. The Racial Disparity rank is calculated by averaging the gaps in outcomes for White residents and residents of color for 26 measures. This average disparity is then ranked against the other states and DC. A rank of 51 means that the disparity is the largest compared to all states and DC. A lower rank indicates that the disparity is narrower, but even then, racial economic inequality remains problematic for the state and its residents' economic resilience. The Racial Disparity rank accounts for 40% of a state's Scorecard rank.

Limitations of Scorecard Data by Race & Ethnicity: Scorecard's sources are primarily national surveys, and for each population by racial or ethnic group, we use the data for people identifying only as that racial or ethnic group and have a minimum threshold for the number of observations available to produce an estimate. The result is a significant amount of missing data for populations of color, particularly in less populated states. In addition, we use aggregate definitions of populations (e.g., "Asian," "Latino") which group people with ancestry from a variety of countries and varying backgrounds, masking diversity and economic disparity within groups.
