iOS Oregon Inspector App Release Notes, Version 1.0.15
Released July 15, 2020

1. *Image Files No Longer Saved to Record Documents*

Reported by: Multiple agencies

Issue: When an inspector results an inspection, they can either take pictures with their camera app or attach existing images from their device. These images are available in two ways:

      a. They are automatically appended to the ***Inspection Summary Report.***

      b. The individual image files are saved under ***Record Documents***.

We heard from multiple agencies that this is causing the Record Documents list to be too long and unmanageable when the images are not necessary to be in this list.

Fix: Image files that are uploaded with an inspection result are ***no longer saved*** to the Record Documents. They are only available on the Inspection Summary Report that is automatically generated and attached to Record Documents.

Note: If the original image file is needed for any reason, it would have to be retrieved off of the inspector's device that was used to take the picture.

2. *Inspection Summary Report File Naming Convention Change*

Reported by: Multiple agencies

Issue: The Inspection Summary Report file name was the same for all inspections resulted on a specific permit; they were not unique in any way. Some contractors save the Inspection Summary Reports they receive to their computer and would have to change the file name to make it unique. This also made it difficult for back office staff to know which Inspection Summary Report to review for a specific inspection.

Fix: The Inspection Summary Report file naming convention was changed to make them unique:

<div align="center">

Inspection Type + **Date/Time of Inspection Result** + **InspectionResultReport**

</div>

Before:

InspectionResultReport-385-19-000743-DWL.pdf
InspectionResultReport-385-19-000743-DWL.pdf
InspectionResultReport-385-19-000743-DWL.pdf

After:

4999 Final Electrical-4-15-2020-1230-InspectionResultReport.pdf
2999 Final Mechanical-4-15-2020-1230-InspectionResultReport.pdf
3999 Final Plumbing-4-15-2020-1230-InspectionResultReport.pdf

3. *Job List - Sort by Address*

Reported by: City of Redmond

Issue: When Sort by Address is selected and the inspector logs out and back in, the wrong records are under each address heading. Refreshing the Job List fixes this but the list will be jumbled again if the inspector logs out and back in again. This started occurring in v. 1.0.11.

Fix: The Job List displays correctly when logging in with Sort by Address selected.

4. *Signatures Overlay Details on Inspection Summary Report*

Reported by: Umatilla County

Issue: If an inspector used the signature feature when resulting an inspection, the signature would overlay on top of the details of the Inspection Summary Report. This started occurring in v. 1.0.11.

Fix: Signatures are oriented at the bottom of the Inspection Summary Report and do not cover up any other important details on the report.

5. *Open ZIP Folder of PDF Files*

Reported by: Lincoln City

Issue: Occasionally customers provide a ZIP file of all their PDF electronic plans. These could not be opened and viewed in the app.

Fix: A ZIP folder of PDF files can now be opened and viewed from the app. This works when there is a good internet connection as well as when in Offline Mode.

6. *Assigned Inspections on Disabled Record Type*

Reported by: Yamhill County

Issue: Assigned inspections do not display on the Job List when the Record Type is disabled. This happens occasionally when a jurisdiction decides at some point to disable a record type that has been enabled in Production with active permits and inspections.

Fix: All assigned inspections display on the Job List after a record type is disabled.
