Medical and behavioral health providers: Join us to better serve Veterans and Military Service Members in your community!

Veterans face unique barriers to accessing medical and behavioral healthcare. Many providers, although highly skilled, are unfamiliar with Military culture and the unique needs of Veterans as they pertain to behavioral health, and more specifically, to suicidality.

Oregon Veterans face a higher suicide rate than their civilian peers. For every Military member who dies in combat, 25-30 take their own lives.

Join us for a free two-day, virtual training with other providers and improve your familiarity with Veteran and Military needs around mental health and suicide. Training is followed by a 2-hour virtual practice session on one of four August dates.
