

This file displays the 'All Acct Event' table properly joined to the various 'Profile' tables within the SFMA Datamart.

Note: If a user is using an up-to-date 'Open Catalog Extension' (OCE), the coding within the oce will help to automatically join tables together. The following diagrams will demonstrate the proper joins. For this example, all joins are set as 'simple'. In addition, the Profile table diagrams only show the fields that are necessary to create the proper joins.
