

A GUIDE to the UNNATURAL FEATURES and DANGERS of the REGION OF

INFOSEC

# THE MOUNTAINS OF MALWARE

The MOUNTAINS OF MALWARE are difficult to traverse unscathed. There are no safe paths when MALWARE is there, even tho' the adventurer be guided by a sturdy & stalwart ANTIVIRUS.

## VIRUS VALE

A common danger. Attaches itself to hapless data, infects it & brings MISERY.

## WORM TURN

Unlike the VIRUS, the vile WORM requires no activation nor invitation to invade. BEWARE!

## TROJAN HORSE SPUR

The TROJAN disguises itself as another program in order to INFILTRATE.

## RANSOMWARE RIDGE

Malware which demands money with menaces. NEVER PAY! You will not receive your data back.

## ROOTKIT ROCKFALL

ROOTKITS subvert systems & steal access to your DATA.
